

PRACTICAL DATA COMMUNICATIONS

Second Edition

Roger L. Freeman

Wiley Series
in Telecommunications
and Signal Processing

John G. Proakis, Series Editor

CONTENTS

Preface

xxix

Chapter 1	The Enterprise Network Environment	1
1.1	Enterprise Networks	1
1.2	Types of Network Topology	3
1.3	Network Access: An Overview	6
1.4	Initial Network Design Considerations	7
1.5	Connection-Oriented and Connectionless Service	8
1.6	Data Protocols: Key to Network Operation	8
1.6.1	Introduction	8
1.6.2	Basic Protocol Functions	9
	References	11
Chapter 2	The OSI Model and the Data-Link Layer	13
2.1	Introduction	13
2.2	Layering	14
2.2.1	Notation	14
2.2.2	Basic Structuring Technique	14
2.3	Type and Instance	15
2.4	Possible Sublayers	16
2.5	Data Units	17
2.6	Specific Layers of the OSI Reference Model	18
2.7	Layer Descriptions	19
2.8	Specific Comments on OSI	33
2.8.1	General	33
2.9	Discussion of OSI Layers 1-4	34
2.9.1	The Physical Layer (Layer 1)	34
2.9.2	The Data-Link Layer (Layer 2)	35
2.9.3	The Network Layer (Layer 3)	37

- 2.9.4 Internet Protocol (IP) and Gateway Layer (Layer 3.5) 37
- 2.9.5 The Transport Layer (Layer 4) 38
- 2.10 Procedural Versus Electrical 39
 - 2.10.1 Narrative 39
- References 39

Chapter 3 High-Level Data-Link Control (HDLC) Typical Data-Link Layer Protocol 41

- 3.1 Introduction 41
- 3.2 Stations and Configurations 42
- 3.3 Modes of Operation Used with HDLC 43
- 3.4 HDLC Frame Structure 43
 - 3.4.1 Sequence Numbering in HDLC 45
 - 3.4.2 The Poll/Final Bit 47
 - 3.4.3 Supervisory Frames 47
 - 3.4.4 Unnumbered (U) Frames 48
 - 3.4.5 Information Field 48
 - 3.4.6 Frame Check Sequence (FCS) Field 48
- 3.5 Commands and Responses 49
 - 3.5.1 Mode-Setting Commands 49
 - 3.5.2 Miscellaneous Commands 51
 - 3.5.3 Responses to Unnumbered Commands 51
- 3.6 Frame Operation 52
- 3.7 Error Recovery 53
- 3.8 Other Station Modes 54
- 3.9 SDLC Variations with HDLC 55
- References 55

Chapter 4 Data Network Operations 57

- 4.1 Chapter Objective 57
- 4.2 General Requirements for the Interchange of Data 57
- 4.3 Discussion of Issues and Requirements 58
 - 4.3.1 Pathway(s) Exist(s) 58
 - 4.3.2 Access to the Pathway 59
 - 4.3.3 Directing the Data Messages to Its Intended User(s) 59
 - 4.3.4 Data Urgency 59
 - 4.3.5 Maintenance of Data Integrity 60
- 4.4 Error Detection Schemes 61
 - 4.4.1 Parity Checks 61
 - 4.4.2 Cyclic Redundancy Check (CRC) 62

- 4.5 Error Correction Schemes 64
 - 4.5.1 Automatic Repeat Request (ARQ) 64
 - 4.5.2 Forward Error Correction (FEC) 65
- 4.6 Data Switching 67
 - 4.6.1 Philosophy of “Data Signaling” Versus Telephone Signaling 69
 - 4.6.2 Smart Bridges, Routers, and Switching Hubs 71
- References 71

Chapter 5 Data Transmission I 73

- 5.1 Electrical Communication of Information 73
- 5.2 The Bit and Binary Transmission of Information 73
- 5.3 Binary Codes for Data Communication 76
- 5.4 Electrical Bit Decisions 79
- 5.5 Electrical Representation of Binary Data 82
 - 5.5.1 Neutral and Polar Waveforms 82
 - 5.5.2 Waveforms and Line Codes 83
- 5.6 Binary Conventions 84
- 5.7 Bit-Parallel and Bit-Serial 85
- 5.8 Baseband 86
- 5.9 Data Rate 87
 - 5.9.1 Error Rate 87
- References 88

Chapter 6 Data Transmission II 89

- 6.1 Interpreting a Serial Stream of Bits 89
 - 6.1.1 The Problem 89
 - 6.1.2 Start-Stop Transmission 89
 - 6.1.3 Synchronous Transmission 91
- 6.2 Timing Distortion in a Serial Bit Stream 93
- 6.3 The Transmission of Digital Data 94
 - 6.3.1 Baseband Transmission 94
 - 6.3.2 Transmission of Data over Longer Distances 95
 - 6.3.2.1 The Voice Channel 95
 - 6.3.2.2 Modems 95
 - 6.3.2.3 Voice Channel Impairments to Data Transmission 97
 - 6.3.3 Data Circuit Performance 102
 - 6.3.3.1 Introduction to Error Performance 102

- 6.3.3.2 Error Performance from an ITU-T Perspective 103
- 6.3.3.3 Error Performance from a Bellcore Perspective 107
- 6.4 Interface at the Physical Layer 107
 - 6.4.1 Introduction 107
 - 6.4.2 The DTE–DCE Interface 108
 - 6.4.2.1 EIA/TIA-232 Electrical Interface 110
 - 6.4.2.2 Functional Description of Selected Interchange Circuits 112
 - 6.4.2.3 EIA/TIA Interface Standards: EIA/TIA-530, EIA/TIA-422, and EIA/TIA-423 114
- 6.5 The Question of Bandwidth 116
 - 6.5.1 Bandwidth Versus Bit Rate 116
 - 6.5.2 Bandwidth Defined 116
 - 6.5.3 First and Second Bandwidth Approximations 116
 - 6.5.4 Shannon 117
 - 6.5.5 Summary 118
- References 118

Chapter 7 The Telecommunications Network as a Vehicle for Data Transport

- 7.1 The Public Switched Telecommunication Network 121
 - 7.1.1 Introduction 121
 - 7.1.2 Access to the PSTN: The Subscriber Network 122
- 7.2 Introduction to Digital Networks 123
 - 7.2.1 Rationale 123
 - 7.2.2 Development of a PCM Signal 123
 - 7.2.3 The Concept of Frame 131
 - 7.2.4 The Line Code 134
 - 7.2.5 Regenerative Repeaters 135
 - 7.2.6 Higher-Order PCM Multiplex Systems 136
 - 7.2.7 Line Rates and Codes 139
- 7.3 Brief Overview of Digital Switching 139
 - 7.3.1 Advantages and Issues of PCM Switching 139
 - 7.3.2 Approaches to PCM Switching 140

- 7.3.3 Time Switch 140
- 7.3.4 Space Switch 142
- 7.3.5 Time-Space-Time Switch 144
- 7.3.6 Space-Time-Space Switch 146
- 7.4 Digital Network Structure 146
- 7.5 Digital Network Impairments and Performance Requirements 147
 - 7.5.1 Error Performance 147
 - 7.5.2 Slips 147
 - 7.5.2.1 Definition 147
 - 7.5.2.2 North American Slip Objectives 148
 - 7.5.2.3 CCITT Slip Objectives 148
- 7.6 Data Transmission on the Digital Network 149
 - 7.6.1 The Problem 149
 - 7.6.2 Some Solutions 149
 - 7.6.2.1 The North American Digital Data System (DDS) 150
 - 7.6.2.2 Bit Integrity in a Time Slot 150
- 7.7 Interconnects and Bypass 151
- 7.8 Bypass in Economically Evolving Nations 152
- References 152

Chapter 8 The Transmission of Data over the Analog Voice Channel

155

- 8.1 Background 155
- 8.2 Two-Wire Versus Four-Wire Operation 156
 - 8.2.1 What Is Two-Wire and Four-Wire Operation? 156
 - 8.2.2 Two-Wire Transmission 156
 - 8.2.3 Four-Wire Transmission 156
- 8.3 Echo and Singing: Telecommunication Network Impairments 159
- 8.4 Amplitude Distortion and Phase Distortion 159
 - 8.4.1 Introduction 159
 - 8.4.2 Amplitude Distortion 160
 - 8.4.3 Phase Distortion 160
 - 8.4.4 Conditioning and Equalization 161
- 8.5 Data Modems 165
 - 8.5.1 Where We Are and Where We Are Going 165
 - 8.5.2 Getting More Bits per Hertz 165
 - 8.5.3 Specific High-Speed Modems 168

- 8.5.4 Scrambling and Its Rationale 174
- 8.5.5 Introduction to Trellis-Coded Modulation (TCM) 176
- 8.5.6 The V.34 Modem: 28,8000 bps and 33,600 bps 178
 - 8.5.6.1 General 178
 - 8.5.6.2 Selected Definitions 179
 - 8.5.6.3 An Overview of Selected Key Areas of Modem Operation 179
 - 8.5.6.4 Framing 183
 - 8.5.6.5 Encoder 186
- 8.5.7 The V.90 Modem—Maximum Data Rate: 56 kbps 187
 - 8.5.7.1 Principal Characteristics 187
 - 8.5.7.2 Definitions 188
 - 8.5.7.3 Overview of V.90 Operation 191
 - 8.5.7.4 V.90 Encoder 191
 - 8.5.7.5 Mapping Parameters 192
 - 8.5.7.6 Input Bit Parsing 192
 - 8.5.7.7 Modulus Encoder 192
 - 8.5.7.8 Mapper 194
 - 8.5.7.9 Spectral Shaping 194
 - 8.5.7.10 Spectral Shaper 196
 - 8.5.7.11 Spectral Shape Filter 198
 - 8.5.7.12 Sign Assignment 198
 - 8.5.7.13 MUX 198
 - 8.5.7.14 Analog Modem 198

References 200

Chapter 9 Data Communications in the Office Environment, Part 1

203

- 9.1 Introduction 203
- 9.2 Distinguishing Characteristics of LANs 204
- 9.3 How LAN Protocols Relate to OSI 206
- 9.4 Logical Link Control (LLC) 206
 - 9.4.1 LLC Sublayer Services and Primitives 208
 - 9.4.1.1 Unacknowledged Connectionless-Mode Service 209
 - 9.4.1.2 Connection-Mode Service 209
 - 9.4.1.3 Type 1 and Type 2 Operation 210
 - 9.4.2 LLC PDU Structure 211
 - 9.4.2.1 Overview 211
 - 9.4.2.2 Control Field Formats 213

- 9.4.2.3 Control Field Parameters 214
- 9.4.1.4 Commands and Responses 216
- 9.5 Medium Access Control (MAC) 223
 - 9.5.1 Introduction 223
 - 9.5.2 Carrier Sense Multiple Access with Collision Detection (CSMA/CD) 223
 - 9.5.2.1 Introduction to CSMA/CD 223
 - 9.5.2.2 MAC Frame Structure for CSMA/CD 223
 - 9.5.2.3 CSMA/CD Basic Operation 229
- 9.6 CSMA/CD—Current Status and Advanced Operation 232
 - 9.6.1 General 232
 - 9.6.2 Half-Duplex and Full-Duplex 232
 - 9.6.3 Compatibility Interfaces—Physical Layer 232
 - 9.6.4 Layer Interface Requirements 236
 - 9.6.4.1 Functional Capabilities of the MAC Sublayer 236
 - 9.6.5 Allowable Implementations—Parameterized Values 238
 - 9.6.5.1 Definition of Slot Time 239
 - 9.6.5.2 CSMA/CD System Designation 239
 - 9.6.6 Physical Signaling (PLS) and Attachment Unit Interface (AUI)—Selected Discussion 240
 - 9.6.6.1 Frame Structure Across the AUI 240
 - 9.6.6.2 Signal Characteristics 241
 - 9.6.6.3 Medium Attachment Unit (MAU)—10BASE5 244
 - 9.6.6.4 Broadband CSMA/CD, 10BROAD36—Overview 244
 - 9.6.7 System Configurations for Multisegment 10-Mbps Baseband Networks 249
 - 9.6.7.1 Overview 249
 - 9.6.7.2 Shrinkage of the Interpacket Gap (IPG) 251
 - 9.6.7.3 Transmission System Model 1 251

- 9.6.7.4 Typical Topologies Applicable to Transmission System Model 1 252
- 9.7 100-Mbps CSMA/CD Baseband Networks 252
 - 9.7.1 Overview—Key Points 252
 - 9.7.1.1 Reconciliation Sublayer (RS) and Media Independent Interface (MII)—Introduction 254
 - 9.7.1.2 Physical Layer Signaling Systems 255
 - 9.7.1.3 Repeater 256
 - 9.7.2 Reconciliation Sublayer (RS) and Media-Independent Interface (MII)—Description Details 256
 - 9.7.2.1 MII Frame Structure 260
 - 9.7.3 100BASE-T4, Its PMA, and PCS 261
 - 9.7.3.1 Introduction 261
 - 9.7.3.2 Objectives 261
 - 9.7.3.3 Description 262
 - 9.7.3.4 Summary of Physical Medium Attachment (PMA) Specification 264
 - 9.7.4 Physical Coding Sublayer (PCS) and Physical Medium Attachment (PMA) Sublayer, Type 100BASE-X 264
 - 9.7.4.1 Objectives 264
 - 9.7.4.2 Functional Requirement 264
 - 9.7.5 System Considerations for Multisegment 100BASE-T Networks 271
 - 9.7.5.1 Physical Size of the Network 271
 - 9.7.5.2 Transmission Models 272
 - 9.7.5.3 Round-Trip Collision Delay—Key to Network Operation and Maximum Size 273
- 9.8 1000-Mbps CSMA/CD Networks 274
 - 9.8.1 Overview 274
 - 9.8.2 Reconciliation Sublayer (RS) and Gigabit Media-Independent Interface (GMII) 276
 - 9.8.2.1 Overview 276
 - 9.8.2.2 GMII Data Stream 276
 - 9.8.3 Physical Coding Sublayer (PCS) and Physical Medium Attachment (PMA) Sublayer, 1000BASE-X 277

- 9.8.3.1 Overview 277
- 9.8.3.2 Objectives 278
- 9.8.3.3 Summary of 1000BASE-X Sublayers 278
- 9.8.3.4 Physical Coding Sublayers (PCS) 279
- 9.8.4 System Considerations for Multisegment 1000-Mbps Networks 283
 - 9.8.4.1 Overview 283
 - 9.8.4.2 Single-Collision-Domain Multisegment Networks 284
 - 9.8.4.3 Transmission System Model 1 285
 - 9.8.4.4 Transmission System Model 2 285
- References 288

Chapter 10 Data Communications in the Office Environment, Part 2

289

- 10.1 Medium Access Control—Token-Passing Schemes 289
 - 10.1.1 Introduction 289
 - 10.1.2 Token-Passing Bus 290
 - 10.1.2.1 Token-Bus Frame Formats 291
 - 10.1.2.2 Operational Aspects 292
 - 10.1.3 Token-Passing Ring 293
 - 10.1.3.1 Overview 293
 - 10.1.3.2 Token-Ring Frame Formats 295
 - 10.1.3.3 Token-Ring Symbol Transmission Characteristics 301
 - 10.1.3.4 Symbol Decoder 303
 - 10.1.3.5 Latency 303
 - 10.1.3.6 Station Organization and Basic PMC Requirements 305
 - 10.1.4 Fiber Distributed Data Interface (FDDI) 308
 - 10.1.4.1 Introduction and Overview 308
 - 10.1.4.2 Ring Transmission 310

- 10.1.4.3 Protocol Data Units 312
- 10.1.4.4 FDDI Timers and Timing Budget 314
- 10.1.4.5 FDDI Ring Operation 314
- 10.1.5 Wireless LANs (WLANs) 316
 - 10.1.5.1 Introduction 316
 - 10.1.5.2 Definitions 316
 - 10.1.5.3 Frame Formats 318
 - 10.1.5.4 Overview of the WEP 323
 - 10.1.5.5 MAC Access 323
 - 10.1.5.6 Overview of the Air Interface 332
- 10.2 Repeaters, Bridges, Routers, and Hubs 335
 - 10.2.1 Definitions and Interactions 335
- 10.3 LAN Bridges—Overview 335
 - 10.3.1 The IEEE 802.1 Bridge 338
 - 10.3.1.1 Applications of the 802.1 Bridge 338
 - 10.3.1.2 Principles of Operation 338
 - 10.3.1.3 The Spanning Tree Algorithm 344
 - 10.3.1.4 Bridge Protocol Data Unit (BPDU) 350
 - 10.3.2 Source Routing Bridges 352
 - 10.3.3 Remote Bridges 354
- 10.4 Hubs and Switching Hubs 355
 - 10.4.1 Rationale and Function 355
 - 10.4.2 Improvements in Hub Technology 355
- 10.5 Routers 356
 - 10.5.1 Addressing with Hierarchical Significance 356
 - 10.5.2 Subnet Masks 358
- 10.6 Virtual Local Area Networks (VLANs) 358
- 10.7 Servers and Intranets 359
 - 10.7.1 Servers 359
 - 10.7.2 Intranet and Extranet 360
- References 360

Chapter 11 Wide Area Networks (WANs)

- 11.1 Background and Scope 363
- 11.2 Basic Approaches 364
 - 11.2.1 Point-to-Point Links 364

- 11.2.1.1 Economy Versus Data Perishability 364
- 11.2.1.2 Dedicated Circuits 365
- 11.2.2. Data Multiplexers and Statmultiplexers 366
 - 11.2.2.1 Time Division Multiplexing 366
 - 11.2.2.2 Statistical Time Division Multiplexing 366
- 11.3 Packet Networks for Data Communication 367
 - 11.3.1 Introduction to Packet Data 367
 - 11.3.2 Packet-Switched and Virtual Connections Based on ITU-T Rec. X.25 369
 - 11.3.2.1 Introduction 369
 - 11.3.2.2 X.25 Packets Are Contained in LAPB Frames 370
 - 11.3.2.3 Single-Link and Multilink Procedures 372
 - 11.3.2.4 Packet-Level DTE/DCE Interface 373
 - 11.3.2.5 A Typical X.25 Packet 377
 - 11.3.2.6 Typical X.25 Transmission Exchange of Packets 381
 - 11.3.2.7 Addressing in X.25 382
 - 11.3.2.8 Assignment of Logical Channels 385
- 11.4 Transmission Control Protocol/Internet Protocol (TCP/IP) 386
 - 11.4.1 Background and Application 386
 - 11.4.2 TCP/IP and Data-Link Layers 387
 - 11.4.3 The IP Routing Function 390
 - 11.4.4 Detailed IP Operation 391
 - 11.4.4.1 Frame Format of an IP Datagram; Description of Functions 391
 - 11.4.4.2 IP Routing 397
 - 11.4.4.3 Internet Control Message Protocol (ICMP) 399
 - 11.4.5 The Transmission Control Protocol 402
 - 11.4.5.1 TCP Defined 402
 - 11.4.5.2 TCP Mechanisms 403

- 11.4.5.3 ULP Synchronization 404
- 11.4.5.4 ULP Modes 404
- 11.4.5.5 Scenario 405
- 11.4.5.6 TCP Header Format 408
- 11.4.5.7 TCP Entity State Diagram 410
- 11.4.6 Internet Protocol Version 6 (IPv6) 410
 - 11.4.6.1 IPv6 Routing 410
 - 11.4.6.2 IPv6 Header 411
- 11.5 User Datagram Protocol (UDP) 414
 - 11.5.1 UDP Header Format and Fields 414
- 11.6 The CLNP Protocol Based on ISO 8473 415
 - 11.6.1 CLNP Frame Formats 416
 - 11.6.2 Frame Field Description—Fixed Part 416
 - 11.6.3 Error Report PDU (ER) 423
 - 11.6.3.1 Reason for Discard 423
- 11.7 Networking via VSATs 424
 - 11.7.1 Rationale of VSAT Networks 424
 - 11.7.2 Basic Description of a VSAT Network 425
 - 11.7.3 Disadvantages of a VSAT Network 425
 - 11.7.4 Important Design Variables 427
 - 11.7.4.1 Definitions 428
 - 11.7.4.2 Optimizing Bandwidth Usage 428
- 11.8 Hypothetical Reference Connections for Public Synchronous Data Networks 430
- References 431

Chapter 12 Frame Relay 433

- 12.1 How Can Networks Be Speeded Up? 433
 - 12.1.1 The Genesis of Frame Relay 435
- 12.2 Introduction to Frame Relay 436
 - 12.2.1 The Frame Structure 437
 - 12.2.2 Address Field Discussion 441
 - 12.2.2.1 Address Field Variables 441
- 12.3 DL-CORE Parameters (As Defined by ANSI) 444
 - 12.3.1 Procedures 444
- 12.4 Traffic and Billing on Frame Relay 445

- 12.5 PVCs and SVCs 446
- 12.6 Two Types of Interfaces: UNI and NNI 446
- 12.7 Congestion Control: A Discussion 447
 - 12.7.1 Network Response to Congestion 448
 - 12.7.2 User Response to Congestion 448
 - 12.7.3 Consolidated Link Layer Management (CLLM) Messages 449
 - 12.7.4 Action of a Congested Node 452
- 12.8 Flow Control and Possible Applications of FECN and BECN Bits 453
 - 12.8.1 FECN Usage 453
 - 12.8.2 BECN Usage 454
- 12.9 Policing a Frame Relay Network 455
 - 12.9.1 Introduction 455
 - 12.9.2 Definitions 455
 - 12.9.3 Relationship Among Parameters 456
- 12.10 Quality of Service Parameters 458
- 12.11 Network Responsibilities 459
- 12.12 Frame Relay Signalling Functions 460
 - 12.12.1 PVC Management Procedures 461
 - 12.12.1.1 Message Definition 461
 - 12.12.1.2 Description of Operation: Health and Welfare, PVC Link 463
 - 12.12.2 Signaling Required for SVCs 468
- 12.13 Compatibility Issues 474
- References 480

Chapter 13 Integrated Services Digital Networks (ISDNs) 483

- 13.1 Introduction 483
- 13.2 ISDN Structures 483
 - 13.2.1 ISDN User Channels 483
 - 13.2.2 Basic and Primary Rate Interfaces 484
- 13.3 User Access and Interface 485
 - 13.3.1 General 485
- 13.4 ISDN Protocols and Protocol Issues 488
- 13.5 ISDN Networks 490
- 13.6 ISDN Protocol Structures 493
 - 13.6.1 ISDN and OSI 493
 - 13.6.2 Layer 1 Interface, Basic Rate (CCITT) 494
 - 13.6.2.1 Primitives Between Layer 1 and Other Entities 495

- 13.6.2.2 Interface Functions 495
- 13.6.2.3 Frame Structure 496
- 13.6.2.4 Line Code 498
- 13.6.2.5 Timing Considerations 498
- 13.6.2.6 BRI Differences in the United States 498
- 13.6.3 Layer 1 Interface, Primary Rate 500
 - 13.6.3.1 Interface at 1,544 Mbps 501
 - 13.6.3.2 Interface at 2,048 Mbps 504
- 13.7 Overview of Layer 2 Interface: Link Access Procedure for the D Channel (LAPD) 505
 - 13.7.1 Layer 2 Frame Structure for Peer-to-Peer Communication 509
- 13.8 Overview of Layer 3 514
 - 13.8.1 Layer 3 Specification 516
 - 13.8.1.1 General Message Format and Information Elements Coding 518
- 13.9 ISDN Packet Mode Review 520
 - 13.9.1 Introduction 520
 - 13.9.2 Case A: Configuration When Accessing PSPDN Services 520
 - 13.9.3 Case B: Configuration for the ISDN Virtual Circuit Service 521
 - 13.9.4 Service Aspects 523
 - 13.9.4.1 Access to PSPDN Services—Case A 523
 - 13.9.4.2 Access to the ISDN Virtual Circuit Service—Case B 523
- References 524

Chapter 14 Building and Campus Wiring and Cabling for Data Communications

- 14.1 Background and Objective 527
- 14.2 Major Elements of Telecommunication Building Layout 528
- 14.3 Horizontal Cabling 528
 - 14.3.1 Selection of Media 529
- 14.4 Backbone Cabling 530
 - 14.4.1 Topology of Backbone Cabling 530
 - 14.4.2 Selecting Cable Media 530
- 14.5 Telecommunication Closets 532
 - 14.5.1 Cabling Practices 532

- 14.6 Entrance Facilities 533
- 14.7 100- Ω Unshielded Twisted-Pair (UTP) Cabling Systems 533
 - 14.7.1 UTP Category Definitions 533
 - 14.7.2 Horizontal UTP Cable 534
 - 14.7.2.1 Specific Transmission Characteristics 534
- 14.8 Backbone UTP Cabling 535
 - 14.8.1 Transmission Performance Requirements 535
 - 14.8.2 Connecting Hardware for UTP Cable 536
- 14.9 150- Ω Shielded Twisted-Pair Cabling Systems 538
 - 14.9.1 Transmission Performance Requirements 538
- 14.10 Optical Fiber Cabling Systems 539
 - 14.10.1 Backbone Optical Fiber Cable 540

Chapter 15 Broadband Data Transport Techniques**551**

- 15.1 Chapter Objective 551
- 15.2 Introduction to Fiber-Optics Transmission 552
 - 15.2.1 What Is So Good About Fiber-Optic Transmission? 552
 - 15.2.2 Advantages of Optical Fiber 553
 - 15.2.3 Overview of an Optical Fiber Link 554
 - 15.2.4 Optical Fiber Transmission 555
 - 15.2.4.1 Optical Fiber Composition 555
 - 15.2.4.2 Distortion and Dispersion 558
 - 15.2.4.3 Attenuation 561
 - 15.2.5 Types of Optical Fiber 562
 - 15.2.5.1 Multimode Fibers 562
 - 15.2.5.2 Single-Mode Fiber 562
 - 15.2.6 Fiber-Optic Cable 563
 - 15.2.6.1 Cable Composition 563
 - 15.2.7 Fiber-Optic Transmitters 564
 - 15.2.7.1 Light-Emitting Diodes 565
 - 15.2.7.2 Laser Diodes 566
 - 15.2.8 Receivers 566
 - 15.2.8.1 PIN Photodiodes 566
 - 15.2.8.2 Avalanche Photodiodes 567
 - 15.2.8.3 Noise 567
 - 15.2.9 Repeaters 568
 - 15.2.10 Fiber-Optic Amplifiers 568
 - 15.2.11 The Joining of Fibers: Splices and Connectors 569
 - 15.2.11.1 Splices 569
 - 15.2.11.2 Connectors 569
 - 15.2.12 Modulation and Coding 569
 - 15.2.12.1 Digital Signals 570
 - 15.2.12.2 Optical Line Coding and Transmission Rate 571
- 15.3 Higher-Order Multiplexing Formats: SONET and SDH 571
 - 15.3.1 Synchronous Optical Network (SONET) 571
 - 15.3.1.1 Introduction 571
 - 15.3.1.2 SONET Rates and Formats 571

15.3.1.3	STS-1 Frame Structure	572
15.3.1.4	STS- <i>N</i> Frame Structure	576
15.3.1.5	The Structure of Virtual Tributary	577
15.3.1.6	SONET Layers and Transport Functions	581
15.3.2	Synchronous Digital Hierarchy	583
15.3.2.1	SDH Standard Bit Rates	584
15.3.2.2	Interface and Frame Structure	584
15.3.2.3	Frame Structure	588
15.3.2.4	Interconnection of STM-1s	590
15.3.2.5	Basic SDH Multiplexing Structure	591
15.4	Line-of-Sight Microwave and Millimeter-Wave Transmission Systems	591
15.4.1	Broadband Radio Systems	591
15.4.2	An Overview of Line-of-Sight Microwave	592
15.4.2.1	Line of Sight	592
15.4.2.2	Typical Line-of-Sight Microwave Installation	593
15.4.3	Satellite Communications	596
15.4.3.1	Concept and Applications	596
15.4.3.2	Uplinks and Downlinks	597
15.4.3.3	Satellite Orbits	597
15.4.3.4	Digital Satellite System Operation and Access	598

Chapter 16 Broadband ISDN (B-ISDN) and the Asynchronous Transfer Mode (ATM)

601

16.1	Where Are We Going?	601
16.2	Introduction to ATM	602
16.3	User-Network Interface (UNI), Configuration, and Architecture	605
16.4	The ATM Cell: Key to Operation	606
16.4.1	ATM Cell Structure	606
16.4.2	Header Error Control Sequence Generation	611

- 16.4.3 Idle Cells 613
- 16.5 Cell Delineation and Scrambling 613
 - 16.5.1 Delineation and Scrambling Objectives 613
 - 16.5.2 Cell Delineation Algorithm 614
- 16.6 ATM Layering and B-ISDN 615
 - 16.6.1 Functions of Individual ATM/B-ISDN Layers 616
 - 16.6.1.1 Physical Layer 616
 - 16.6.1.2 The ATM Layer 618
 - 16.6.2 The ATM Adaptation Layer (AAL) 620
 - 16.6.2.1 Sublayering of the AAL 620
 - 16.6.2.2 Service Classification of the AAL 620
- 16.7 Services: Connection-Oriented and Connectionless 633
 - 16.7.1 Functional Architecture 633
 - 16.7.2 CLNAP Protocol Data Unit (PDU) Structure and Encoding 635
- 16.8 Aspects of a B-ISDN/ATM Network 637
 - 16.8.1 ATM Routing and Switching 637
 - 16.8.1.1 Virtual Channel Level 637
 - 16.8.1.2 Virtual Path Level 638
- 16.9 Signaling Requirements 640
 - 16.9.1 Setup and Release of VCCs 640
 - 16.9.2 Signaling Virtual Channels 640
 - 16.9.2.1 Requirements for Signaling Virtual Channels 640
 - 16.9.3 Metasignaling 641
 - 16.9.3.1 Metasignaling Functions at the User Access 641
 - 16.9.3.2 Relationship Between Metasignaling and User Access Signaling Configuration 641
 - 16.9.3.3 Metasignaling Functions in the Network 642
 - 16.9.3.4 Metasignaling Requirements 642
 - 16.9.4 Practical Signaling Considerations 643
 - 16.9.4.1 ATM Addressing 644

- 16.9.4.2 Circuit Setup Using ATM Signaling 645
- 16.10 Quality of Service (QoS) 647
 - 16.10.1 ATM Service Quality Review 647
 - 16.10.2 Definitions 647
 - 16.10.3 Cell Transfer Delay 648
 - 16.10.4 Cell Delay Variation 648
 - 16.10.5 Cell Loss Ratio 649
 - 16.10.6 Mean Cell Transfer Delay 649
 - 16.10.7 Cell Error Ratio 649
 - 16.10.8 Severely Errored Cell Block Ratio 650
 - 16.10.9 Cell Misinsertion Rate 650
- 16.11 Traffic Control and Congestion Control 650
 - 16.11.1 Generic Functions 650
 - 16.11.2 Events, Actions, Time Scales, and Response Times 651
 - 16.11.3 Quality of Service, Network Performance, and Cell Loss Priority 652
 - 16.11.4 Traffic Descriptors and Parameters 653
 - 16.11.5 User–Network Traffic Contract 654
 - 16.11.5.1 Operable Conditions 654
 - 16.11.5.2 Source Traffic Descriptor, Quality of Service, and Cell Loss Priority 652
 - 16.11.5.3 Impact of Cell Variation on UPC/NPC and Resource Allocation 654
 - 16.11.5.4 Cell Conformance and Connection Compliance 656
 - 16.11.5.5 Generic Cell Rate Algorithm (GCRA) 657
 - 16.11.5.6 Traffic Contract Parameter Specification 659
- 16.12 Transporting ATM Cells 659
 - 16.12.1 In the DS3 Frame 659
 - 16.12.2 DS1 Mapping 660
 - 16.12.3 E1 Mapping 662

16.12.4	Mapping ATM Cells into SDH	665
16.12.4.1	At STM-1 (155.520 Mbps)	665
16.12.4.2	At STM-4 (622.080 Mbps)	665
16.12.5	Mapping ATM Cells into SONET	666
16.12.6	Cell Rates for Various Typical Connections	666
16.13	ATM Operation, Administration, and Maintenance (OAM)	667
16.13.1	OAM Levels in the B-ISDN	667
16.13.2	Mechanisms to Provide OAM Flows	668
16.13.2.1	Physical Layer Mechanisms	668
16.13.3	ATM Layer Mechanism: F4 and F5 Flows	669
16.13.3.1	F4 Flow Mechanism	669
16.13.3.2	F5 Flow Mechanism	670
16.13.4	OAM Functions of the Physical Layer	671
16.13.4.1	OAM Functions	671
16.13.5	OAM Functions of the ATM Layer	671
16.13.5.1	VP-AIS and VP-FERF Alarms	671
16.13.5.2	OAM Functions for the VCC (F5 Flows)	677
16.13.6	ATM Layer OAM Cell Format	677
16.13.6.1	Common OAM Cell Fields	677
	References	678

Chapter 17 Last-Mile Data Distribution Systems

681

17.1	New Approaches to Outside Plant Distribution	681
17.2	Introducing Last-Mile Distribution Systems	682
17.3	Introduction to CATV	687
17.3.1	The Essentials of TV Signal Distribution on a CATV System	688

17.3.2	Extending CATV Coverage Area	690
17.3.3	The DOCSIS Specification	692
17.3.3.1	RF Channel Assumptions	694
17.3.3.2	Communication Protocols	696
17.3.3.3	Logical Link Control	700
17.3.3.4	Link-Layer Security Sublayer	700
17.3.3.5	MAC Sublayer	700
17.3.3.6	Downstream Transmission Convergence Sublayer	701
17.3.3.7	PMD Sublayer Overview	701
17.3.3.8	Interface Points	702
17.3.3.9	Physical-Media-Dependent Sublayer Specification	702
17.3.3.10	Modulation Formats and Rates	704
17.3.3.11	Symbol Mapping	704
17.3.3.12	Burst Profiles	709
17.4	Local Multipoint Distribution System (LMDS)	716
17.4.1	Frequency Reuse	718
17.5	Other Methods to Breach the Last Mile	724
17.5.1	Remote Wireless (Radio) Bridges	724
17.5.2	In-Building Wireless Telephone Systems	725
	References	725

Chapter 18 Network Management for Enterprise Networks 727

18.1	What is Network Management?	727
18.2	The Bigger Picture	727
18.3	Traditional Breakout by Tasks	728
18.3.1	Fault Management	728
18.3.2	Configuration Management	728
18.3.3	Performance Management	729
18.3.4	Security Management	729
18.3.5	Accounting Management	729

- 18.4 Survivability—Where Network Management Really Pays 729
- 18.5 Availability Enhancement—Rapid Troubleshooting 730
 - 18.5.1 Troubleshooting 731
- 18.6 System Depth—A Network Management Problem 734
 - 18.6.1 Aids in Network Management Provisioning 735
 - 18.6.2 Communication Channels for the Network Management System 739
- 18.7 An Introduction to Network Management Protocols 739
 - 18.7.1 Two Network Management Protocols 739
 - 18.7.2 An Overview of SNMP 740
 - 18.7.3 SNMP Version 2 746
 - 18.7.4 Common Management Information Protocol (CMIP) 747
- 18.8 Telecommunications Management Network (TMN) 749
 - 18.8.1 Objective and Scope 749
 - 18.8.2 Network Management Functions Carried Out in Upper OSI Layers 751
- References 755

Appendix I Addressing Conventions 757

- I.1 Transforming Decimal Numbers to Binary Numbers and Transforming Binary Numbers to Decimal Numbering 757
- I.2 Decimal Digit Representation in IP Addresses 759
- I.3 Binary, Octal, and Hexadecimal Numbers 761

Appendix II Acronyms and Abbreviations 763
