

Barry L. Batzing

Microbiology

AN INTRODUCTION

Contents

Section I Basic Principles 1

Chapter 1 Microorganisms 2

- What Is a Microorganism? 4
 - Microbial Diversity 5
 - Unifying Characteristics 6
- The Study of Microorganisms Requires a Unique Way of Working 7
- The Discovery of Microorganisms and the Development of Microbiology 9
- Careers in Microbiology Today 12
- Summary 13
- Key Terms 13
- Review Questions 13
- Critical Thinking Questions 14
- Group Activity 14

Chapter 2 Cells 15

- Basic Components of All Cells 17
 - Cytoplasmic Membrane 17
 - Nuclear Region 19
 - Cytoplasm 19
- Prokaryotic Cells 20
 - Nuclear Region 22
 - Cytoplasmic Membrane and Internal Membranes 23
 - Prokaryotic Ribosomes 24
 - Inclusions 24
 - Cell Wall 26
 - Capsule and Glycocalyx 29
 - Fimbriae and Pili 29
 - Bacterial Flagella 30
 - Endospore 32
- Eukaryotic Cells 33
 - Nucleus 34
 - Cytoplasmic Membrane 34
 - Mitochondria and Chloroplasts 36
 - Internal Membrane Systems 38
 - Ribosomes 39
 - Cytoskeleton 39
 - Cell Wall 39
 - Flagella and Cilia 39

- Microscopy 40
 - Resolution 41
 - Types of Microscopes 42
- Summary 46
- Key Terms 47
- Review Questions 47
- Critical Thinking Questions 47
- Group Activity 48

Section II Growth and Metabolism 49

Chapter 3 Microbial Growth 50

- Growth and Reproduction 50
 - Reproduction in Prokaryotic Microorganisms 51
 - Reproduction in Eukaryotic Microorganisms 52
 - Growth of Microbial Populations 53
 - Measuring Microbial Growth 56
- Requirements for Microbial Growth 58
 - Physical Growth Requirements 59
 - Chemical Growth Requirements 62
 - Culture Media 66
- Manipulating Microbial Growth 67
 - Selective Culture Media 67
 - Differential Culture Media 68
- Summary 70
- Key Terms 71
- Review Questions 71
- Critical Thinking Questions 71
- Group Activity 71

Chapter 4 Microbial Metabolism: Energy Conservation 73

- The Importance of Electrons 74
- Energy Is Conserved as ATP 75
- Enzymes Are Needed to Release and Store Energy 76
 - Enzymes Work Like Locks with Keys 78
 - How Enzymes Are Named 79

Enzyme Inhibitors 79
How the Activity of Enzymes Is Regulated in Cells 81

Mechanisms of Energy Conservation 83
 Substrate-Level Phosphorylation 83
 Electron Transport Phosphorylation 87
Types of Microbial Energy Conservation 92
 Fermentation 92
 Respiration 93
 Photophosphorylation 97

Energy Conservation and Microbial Identification 101
 Fermentations in Microbial Identification 101
 Respiration in Microbial Identification 102
 Analyzing Metabolic Traits 103
Summary 104
Key Terms 105
Review Questions 105
Critical Thinking Questions 105
Group Activity 106

Chapter 5 Microbial Metabolism: Biosynthesis 107

Major Biosynthetic Needs 108
 Polysaccharides 109
 Lipids 109
 Nucleic Acids 110
 Proteins 111
Where Do Biosynthetic Building Blocks Come From? 113
 Dual Roles of Metabolic Pathways 113
Biosynthesis of Nucleic Acids 116
 Biosynthesis of DNA 117
 Biosynthesis of RNA 119
Biosynthesis of Proteins 121
 Where Do Amino Acids for Protein Biosynthesis Come From? 121
 Which Amino Acids Are Incorporated into a Particular Protein? 121
 What Is the Sequence of the Amino Acids in a Protein? 122

The Process of Assembling Amino Acids into Proteins 122

Biosynthesis of Polysaccharides 129
 Biosynthesis of Glycogen 131
 Biosynthesis of Capsular Polysaccharides 131
 Biosynthesis of Dextrans 132
 Peptidoglycan Biosynthesis 132
Biosynthesis of Lipids 134
Autotrophic Carbon Dioxide Fixation 134
Metabolic Connections 137
Summary 137
Key Terms 138
Review Questions 138
Critical Thinking Questions 138
Group Activity 139

Chapter 6 Controlling Microbial Growth 140

An Overview of Microbial Growth 141
 The Situation in Which Microbial Control Is Needed 141
 The Microorganisms That Need to Be Controlled 141
 The Type of Treatment 142
Effectiveness of Control Methods 143
Physical Control Methods 144
 Heat 145
 Irradiation 147
 Desiccation and Osmotic Pressure 148
 Filtration 148
 Physical Containment 150
Chemical Control Methods 154
 Disinfectants and Antiseptics 154
 Handwashing 154
 Chemotherapeutic Chemicals 156
Summary 166
Key Terms 166
Review Questions 167
Critical Thinking Questions 167
Group Activity 167

Section III Genetics 168

Chapter 7 Microbial Genetics: Basic Considerations 169

A Brief Review	170
Genotype and Phenotype	170
Structure of DNA	172
DNA Encodes Information	172
The Bacterial Chromosome	175
Eucaryotic Chromosomes	176
Mutation	178
Types of Mutations	180
Detecting Mutations	180
Directed (Adaptive) Mutation	184
DNA Replication	185
Damage and Repair of DNA	186
Types of DNA Damage	186
DNA Repair Mechanisms	187
Regulation of Genes	189
The Operon	189
Constitutive Enzymes	194
Regulation of Bacterial Virulence Genes	194
Summary	195
Key Terms	195
Review Questions	195
Critical Thinking Questions	196
Group Activity	196

Chapter 8 Microbial Genetics: Gene Transfer 197

Recombination	198
Reciprocal Recombination	198
Site-Specific Recombination (Integration)	200
Gene Transfer in Bacteria	200
Transformation	201
Transduction	204
Conjugation	208
Distinguishing Types of Gene Transfer	213
Medical Significance of Gene Transfer	213
Movable Genes	215

Summary 217

Key Terms 218

Review Questions 218

Critical Thinking Questions 218

Group Activity 219

Chapter 9 Microbial Genetics: Genetic Engineering 221

Recombinant DNA Technology	221
Purifying DNA	222
Cutting DNA	223
Restriction Mapping	225
Cloning Genes	226
Protein Synthesis in Expression Systems	228
Recognizing Genetically Engineered Microorganisms	229
Summary of Genetic Engineering	230
Applications of Genetic Engineering	230
Manufacturing Pharmaceuticals	231
Diagnosing Diseases	233
Gene Therapy	236
Environmental Uses of Genetic Engineering	237
Concerns about Genetic Engineering	238
Safety Issues	238
Other Issues	239
Summary	240
Key Terms	240
Review Questions	240
Critical Thinking Questions	240
Group Activity	242

Section IV The Microorganisms 243

Chapter 10 Classification of Microorganisms 244

Objectives of Classification	244
The Position of Microorganisms in the Living World	245
Microbial Kingdoms	245
The Molecular Biologist's View of Microorganisms	247

Principles of Taxonomy 248

Hierarchies 248

Numerical Taxonomy 250

Traits Used to Classify Microorganisms 252

Cell Type 253

Morphological Features of Cells 253

Cellular Metabolism 253

Cellular Reproduction 253

Serotyping 253

Nucleic Acid Analyses 255

Other Taxonomic Tools 258

Summary 259

Key Terms 259

Review Questions 259

Critical Thinking Questions 259

Group Activity 260

Chapter 11 The Bacteria 261

A Brief History of Bacterial Classification 262

Traits Used to Classify Bacteria 263

Cell Morphology 264

Metabolism 264

Reproductive Traits 265

Gram-negative Eubacteria That Have Cell Walls 267

Nonphototrophic Gram-negative Eubacteria That Have Cell Walls 267

Anoxygenic Phototrophic Bacteria 273

Oxygenic Phototrophic Bacteria 274

Gram-positive Eubacteria That Have Cell Walls 275

Gram-positive Cocci 275

Endospore-Forming Bacteria 277

Regular Non-Spore-Forming Rods 278

Irregular, Nonsporing Gram-positive Rods 278

Mycobacteria 278

Actinomycetes 279

Eubacteria Lacking Cell Walls 280

The Archaeobacteria 280

Summary 281

Key Terms 281

Review Questions 281

Critical Thinking Questions 282

Group Activity 282

Chapter 12 Eucaryotic Microorganisms: Protists and Fungi 283

Taxonomy of Protists and Fungi 284

The Kingdom *Protista* 285

Plant-like Protists 286

Animal-like Protists 292

The Kingdom *Fungi* 299

Fungal Morphology 301

Reproduction in Fungi 301

Classification of Fungi 305

Lichens 307

Slime Molds 309

Summary 311

Key Terms 311

Review Questions 311

Critical Thinking Questions 311

Group Activity 312

Chapter 13 Viruses 313

Structure of Viruses 314

Viral Nucleic Acids 316

Nucleocapsid Structure 317

Viral Envelopes 318

Classification of Viruses 320

Virion Characteristics and Taxonomy 320

The International System for Classifying Viruses 321

Families of Vertebrate Viruses 324

DNA-Containing, Nonenveloped Vertebrate Viruses 324

DNA-Containing, Enveloped Vertebrate Viruses 326

RNA-Containing, Nonenveloped Vertebrate Viruses 327

RNA-Containing, Enveloped Vertebrate Viruses 327

How Viruses Reproduce 331

- Attachment 332
- Penetration 332
- Replication 335
- Maturation 335
- Release 337

Persistence of Viruses in Cells 337

- Slow Virus Infections 338

Viruses and Cancer 338

Growing Viruses in the Laboratory 340

- Individual Host Cells for Virus Propagation 340
- Cell (Tissue) Culture for Virus Propagation 340
- Animal and Plant Inoculation 342

The Concept of a Virus 343

Subviral Agents 343

- Viroids 343
- Prions 343
- Satellites and Deltavirus 345

Summary 345

Key Terms 346

Review Questions 346

Critical Thinking Questions 346

Group Activity 347

Section V Pathogenesis and Immunity 348

Chapter 14 Microbial Pathogenicity 349

Relationships with Microorganisms 351

- Microorganisms Benefit the Body 351
- Virulence and Pathogenicity 353
- Opportunists 354
- Virulence and Survival of Pathogens 355

The Mechanisms of Virulence 355

- Microbial Physiology 357
- Specific Adherence 358
- Escaping the Body's Antimicrobial Controls 362
- Direct Invasion of Cells 362
- Toxins 363

The Genetics of Virulence 368

- Plasmids and Virulence 369
- Phage and Virulence 371

Drug Resistance 373

- The Mechanisms of Drug Resistance 373
- The Genetics of Drug Resistance 374
- Microbial Drug Resistance Is Increasing 375

Summary 377

Key Terms 377

Review Questions 378

Critical Thinking Questions 378

Group Activity 378

Chapter 15 Epidemiology 380

Epidemiology Defined 381

Types of Numerical Data 381

Descriptive Epidemiology 386

- Sources of Microbial Pathogens 386
- Routes of Transmission 391

Analytical Epidemiology 396

- Retrospective Epidemiological Analysis 396
- Prospective Epidemiological Analysis 397

Proving That Microorganisms Cause Disease:

Koch's Postulates 398

- Koch's Postulates and AIDS 399

Summary 401

Key Terms 402

Review Questions 402

Critical Thinking Questions 402

Group Activity 403

Chapter 16 Natural Immunity 404

General Concepts of Immunity 405

Mechanisms of Natural Immunity 405

- Anatomical Barriers 406
- Antimicrobial Chemicals 407
- Phagocytes 411
- Natural Killer (NK) Cells 415
- Inflammation and Fever as Antimicrobial Responses 415

Pathogens Adapt to Natural Immunity 417

Summary 418

Key Terms 418

Review Questions 418

Critical Thinking Questions 418

Group Activity 419

Chapter 17 Acquired Immunity 420

An Overview of Acquired Immunity 421

Acquired Immunity Is Specific 421

Acquired Immunity Is Dynamic 422

Acquired Immunity Is Interactive 422

Lymphocytes 422

B Cells 424

T Cells 424

Origins of B Cells and T Cells 424

Antibody-Mediated Immunity 425

The Structure of Antibodies 425

Antigens Select B Cells to Initiate Antibody-Mediated Immunity 429

Kinetics of Antibody Production 432

Cell-Mediated Immunity 434

How T Cells Respond to Antigens 434

Roles of T Cells in Immune Regulation 437

Superantigens 439

T Cells and Fungal Pathogens 439

Disorders of the Immune System 440

Allergy or Hypersensitivity 440

Autoimmunity and Tolerance 442

Laboratory Applications of Antigen–Antibody Interactions 442

Agglutination 443

Immunofluorescence (Fluorescent Antibody Technique) 444

Enzyme-Linked Immunosorbent Assay (ELISA) 446

Immunization 446

Summary 450

Key Terms 451

Review Questions 451

Critical Thinking Questions 451

Group Activity 453

Section VI The Pathogens 454

Chapter 18 Foodborne and Waterborne Pathogens 455

Overview of Diseases Caused by Foodborne and Waterborne Pathogens 456

Diseases Caused by Foodborne Pathogens 456

Diseases Caused by Waterborne Pathogens 460

Staphylococcus aureus and Staphylococcal (“Staph”) Food Poisoning 460

Staphylococcal (“Staph”) Food Poisoning 460

Preventing Staphylococcal Food Poisoning 461

A Classic Outbreak of Staphylococcal Food Poisoning 461

Clostridium botulinum and Botulism 462

Botulism 462

Preventing Botulism 463

A Classic Outbreak of Botulism 464

Infant Botulism 464

Other Endospore-Forming Bacteria 465

Other Gram-Positive Bacteria 465

Listeria monocytogenes 465

Gram-Negative Facultatively Anaerobic Bacteria 466

Salmonella Bacteria and Gastroenteritis 466

Salmonella typhi and Typhoid Fever 471

Escherichia coli 472

Shigella Species 476

Yersinia enterocolitica 477

Vibrio cholerae 478

Other Gram-Negative Bacteria 480

Campylobacter jejuni 480

Pseudomonas aeruginosa 480

Foodborne and Waterborne Viruses 480

Rotaviruses 480

Picornaviruses 480

Norwalk Agent 483

Foodborne and Waterborne Animal-like Protists (Protozoa) 483

Giardia lamblia 483

Entamoeba histolytica 484

Cryptosporidium parvum 484

Naegleria fowleri 488
Cyclospora cayetanesis 488

Poisonous Fungi 488

Plant-like Protists (Algae) and Paralytic Shellfish
Poisoning 489

Summary 490

Key Terms 490

Review Questions 490

Critical Thinking Questions 491

Group Activity 491

Chapter 19 Airborne Pathogens 493

General Concepts of Airborne Pathogens 494

The Major Airborne Pathogens 495

Airborne Pathogens from Animal
Reservoirs 496

Preventing Diseases Caused by Airborne
Pathogens 496

Airborne Gram-Negative Bacterial
Pathogens 496

Bordetella pertussis and Pertussis (Whooping
Cough) 496

Chlamydia pneumoniae: Pneumonia and
Coronary Heart Disease 498

Haemophilus influenzae Type B (Hib)
and Meningitis 498

Legionella pneumophila and Legionellosis 499

Mycoplasma pneumoniae 502

Airborne Gram-Positive Bacterial Pathogens 502

Mycobacterium tuberculosis
and Tuberculosis 502

Streptococcus pneumoniae and Pneumonia 509

Airborne Viruses 511

Adenoviruses and Coronaviruses 511

Influenza Viruses 511

Measles Virus and Measles 515

Mumps Virus and Mumps 519

Varicella Zoster Virus and Chickenpox 519

Variola Virus and Smallpox 522

Airborne Fungal Pathogens 524

Aspergillus Species 525

Blastomyces dermatitidis 525

Coccidioides immitis 525

Cryptococcus neoformans 526

Histoplasma capsulatum 526

Rhizopus Species and Other Zygomycetes
Fungi 527

Summary 527

Key Terms 528

Review Questions 528

Critical Thinking Questions 528

Group Activity 529

Chapter 20 Sexually Transmitted Pathogens 530

General Concepts of Sexually Transmitted
Pathogens 531

The Major Sexually Transmitted Pathogens 532

Preventing Sexually Transmitted Diseases 532

Bacterial Pathogens Transmitted Sexually 534

Chlamydia trachomatis 534

Neisseria gonorrhoeae and Gonorrhea 535

Treponema pallidum and Syphilis 539

Other Sexually Transmitted Bacterial
Pathogens 542

Sexually Transmitted Viral Pathogens 542

Hepatitis B Virus 542

Herpes Simplex Viruses 546

Human Immunodeficiency Virus (HIV)
and Acquired Immunodeficiency
Syndrome 549

Human Papilloma Viruses: Genital Warts
and Cervical Cancer 562

Other Sexually Transmitted Viruses 563

Sexually Transmitted Protists:

Trichomonas vaginalis 564

Summary 564

Key Terms 565

Review Questions 565

Critical Thinking Questions 565

Group Activity 566

Chapter 21 Pathogens Transmitted by Close, Person-to-Person Contact 567

General Concepts of Pathogens Transmitted by Close Personal Contact 568

The Major Pathogens Transmitted by Direct Contact 569

Preventing Diseases Spread by Close, Person-to-Person Contact 569

Bacterial Pathogens Transmitted by Close, Person-to-Person Contact 571

Chlamydia trachomatis and Trachoma 571

Corynebacterium diphtheriae and Diphtheria 571

Helicobacter pylori and Ulcers 572

Mycobacterium leprae 573

Neisseria meningitidis 575

Propionibacterium acnes 576

Staphylococcus aureus and Skin Infections 577

Streptococcus mutans and Tooth Decay 577

Streptococcus pyogenes (Group A, Beta-Hemolytic Streptococci) 581

Viral Pathogens Transmitted by Close, Person-to-Person Contact 584

Epstein-Barr Virus 584

Human Papilloma Viruses and Warts 586

Polioviruses 587

Respiratory Syncytial Virus (RSV) 591

Rhinoviruses and the Common Cold 592

Rubella Virus and Rubella 593

Fungal Pathogens Transmitted by Close, Person-To-Person Contact 594

Candida albicans 594

Epidermophyton, *Microsporium*, and *Trichophyton* 595

Summary 596

Key Terms 596

Review Questions 596

Critical Thinking Questions 596

Group Activity 597

Chapter 22 Zoonoses and Arthropodborne Pathogens 598

General Concepts of Zoonoses 599

Zoonoses Caused by Bacteria 599

Yersinia pestis and Plague 599

Borrelia burgdorferi and Lyme Disease 604

Zoonoses Caused by Rickettsiae: *Rickettsia*, *Coxiella*, and *Ehrlichia* 608

Other Zoonotic Bacteria 610

Zoonoses Caused by Viruses 611

Rabies 611

Hantavirus Pulmonary Syndrome 613

Encephalitis Viruses Transmitted by Mosquitoes 614

Arenaviruses and Lassa Fever 618

Ebola 619

Animal-like Protists Causing Zoonoses 620

Trypanosoma brucei 620

Trypanosoma cruzi 621

Leishmania species 622

Toxoplasma gondii 622

Plasmodium Species and Malaria 624

Summary 627

Key Terms 628

Review Questions 628

Critical Thinking Questions 628

Group Activity 629

Chapter 23 Wound Infections 630

Types of Wounds 631

Sources of Wound Pathogens 631

Factors Contributing to Wound Infections 631

Virulence Factors of Microorganisms

Contaminating Wounds 632

Number of Microorganisms Contaminating a Wound 633

Extent of Tissue Damage at Wound Site 633

Health Status of Wounded Person 633

Major Wound Pathogens 633

Clostridium Species 634

Staphylococcus aureus Infections 636

Group A, Beta-Hemolytic *Streptococcus* and Skin Infections 638

Alpha-Hemolytic *Streptococcus* Bacteria
and Oral Surgery 639

Pseudomonas aeruginosa and Burn
Infections 639

Bacteroides fragilis and Abdominal Wound
Infections 640

Preventing and Treating Wound Infections 640

Nonsurgical Wound Infections 640

Burn Wound Infections 641

Surgical Wound Infections 641

Anaerobic Wound Infections 642

Risk of Injection (Intravenous) Drug Use 643

Summary 644

Key Terms 644

Review Questions 644

Critical Thinking Questions 645

Group Activity 645

Chapter 24 Nosocomial Diseases 646

Historical Recognition of Hospital-Acquired
Infections 647

The Nature of Nosocomial Infections 647

Bacteria Cause Most Nosocomial
Infections 648

Epidemiology of Nosocomial Infections 650

Health Status of the Patient 650

Pathogens in the Hospital Environment 650

Potential Routes of Transmission of Pathogens
in Hospitals 652

Other Factors Involved in Development of
Nosocomial Infections 654

Controlling Nosocomial Infections 655

Surveillance of Nosocomial Infections 655

Specific Procedure to Control Nosocomial
Infections 655

Laboratory Support for Control of Nosocomial
Infections 657

Summary 658

Key Terms 658

Review Questions 658

Critical Thinking Questions 658

Group Activity 659

Section VII Final Perspectives 660

Chapter 25 Food Microbiology and Industrial Microbiology 661

Food Microbiology 661

Microorganisms in Food Production 662

Food Preservation and Spoilage 672

Industrial Microbiology 676

Industrial Fermentations 676

Types of Industrial Fermentations 676

Products of Industrial Fermentations 677

Summary 684

Key Terms 685

Review Questions 685

Critical Thinking Questions 685

Group Activity 686

Chapter 26 Microbial Ecology 687

Ecological Perspectives 688

Focusing on the Microorganism 688

Focusing on Microbial Habitats 689

Types of Microbial Interactions 690

Neutralism 691

Commensalism 691

Mutualism 692

Antagonism 696

Microbial Habitats 697

Terrestrial Microorganisms 697

Aquatic Microorganisms 698

Biogeochemical Roles of Microorganisms 700

The Carbon Cycle 701

The Nitrogen Cycle 701

Microbiological Aspects of Pollution 704

Microorganisms as Pollutants 704

Microorganisms as Causes of Pollution 704

Microorganisms as Indicators of Pollution 706

Microorganisms that Reduce Pollution 711
