

The Report of the
British Nutrition
Foundation Task Force

BRITISH
Nutrition
FOUNDATION

Adverse Reactions to Food

Edited by
Dr Judith Buttriss

Blackwell
Science

Published by Blackwell Science
for the British Nutrition Foundation

Contents

*This report is the collective work of all the members of the Task Force.
Authors of the first draft of each chapter are given below.*

Foreword	xiv
Terms of Reference	xv
Task Force Membership	xvi
1 Introduction and Definitions	1
<i>Dr Judith Buttriss and Dr Sarah Schenker</i>	
1.1 Introduction	1
1.2 Food intolerance	2
1.2.1 Allergic reactions	2
1.2.2 Enzymic reactions	3
1.2.3 Pharmacological reactions	3
1.2.4 Other non-defined idiosyncratic responses	4
1.3 Food aversion	4
1.3.1 Food avoidance	4
1.4 Food poisoning	5
1.4.1 Chemical food poisoning	5
1.4.2 Foodborne bacterial gastroenteritis	6
1.4.3 Food vehicles	7
1.4.4 Foodborne viral gastroenteritis	8
1.5 Key points	9
Appendix A Classification of adverse reactions to foods	10
2 The Immune System	11
<i>Dr Graham Devereux</i>	
2.1 Introduction	11
2.2 The immune system	11
2.3 Innate immunity	12
2.4 Adaptive immunity	12
2.4.1 Anatomy and cells of adaptive immunity	12
2.4.2 Clonal expansion of lymphocytes	13
2.4.3 B cells, immunoglobulins and humoral immunity	13
2.4.4 T cells and cell mediated immunity	16
2.4.5 The generation of effector T cells	18

2.4.6	Effector CD4 ⁺ T cells	23
2.4.7	Effector mechanisms of Th1 mediated immunity	26
2.4.8	Effector mechanisms of Th2 mediated immunity	27
2.5	Allergy	28
2.5.1	IgE mediated allergy	29
2.5.2	Clinical patterns of IgE mediated allergy	33
2.5.3	Non-IgE/T cell mediated allergy	34
2.6	Why do food antigens fail to produce a detrimental immune response?	34
2.6.1	Oral tolerance/true immunological tolerance	35
2.6.2	Mechanisms of oral tolerance	35
2.6.3	Factors influencing oral tolerance	36
2.6.4	Immunological acceptance	36
2.7	Conclusion	37
3	Nutrition and the Immune System	38
	<i>Dr Philip Calder</i>	
3.1	Introduction	38
3.2	Impact of infection on nutrient status	38
3.2.1	Infection is characterised by anorexia	39
3.2.2	Infection is characterised by nutrient malabsorption and loss	39
3.2.3	Infection is characterised by increased resting energy expenditure	39
3.2.4	Infection is characterised by altered metabolism and redistribution of nutrients	39
3.3	Protein-energy malnutrition and immune function	40
3.4	The influence of individual micronutrients on immune function	40
3.4.1	Vitamin A	40
3.4.2	Carotenoids	41
3.4.3	Vitamin B ₆	41
3.4.4	Vitamin C	41
3.4.5	Vitamin E	41
3.4.6	Zinc	43
3.4.7	Copper	44
3.4.8	Iron	44
3.4.9	Micronutrient combinations and resistance to infection	44
3.4.10	Micronutrients and HIV infection	45
3.4.11	Micronutrients and asthma	45
3.5	Dietary fat and immune function	46
3.5.1	Fatty acids in the human diet	46
3.5.2	Amount of dietary fat and immune function	46
3.5.3	Eicosanoids: a link between fatty acids and the immune system	46
3.5.4	Linoleic acid and immune function	48
3.5.5	α -Linolenic acid and immune function	48
3.5.6	Fish oil and immune function	49
3.5.7	Dietary fat and Th1 skewed immunological diseases	49
3.5.8	Fatty acids and Th2 skewed immunological diseases	50
3.6	Dietary amino acids and related compounds and immune function	51
3.6.1	Sulphur amino acids and glutathione	51
3.6.2	Arginine	51
3.6.3	Glutamine	52
3.7	Probiotics, immune function and allergy	52
3.7.1	The theoretical basis for the use of probiotics	52

3.7.2	Probiotics and immune function	52
3.7.3	Probiotics and allergy	53
3.8	Breast feeding and immune function	53
3.8.1	The composition of breast milk	53
3.8.2	Breast feeding, immune function and infection	54
3.9	General comments	54
3.10	Key points	56
4	Epidemiology of Food Intolerance and Food Allergy	57
	<i>Dr Graham Devereux</i>	
4.1	Introduction	57
4.2	The adequacy of currently available epidemiological data for food intolerance	57
4.2.1	Non-IgE mediated allergy	58
4.3	Infants and children	58
4.3.1	Cows' milk intolerance and allergy	59
4.3.2	Allergy to egg	60
4.3.3	Peanut allergy	60
4.3.4	Intolerance to food additives	61
4.4	Adults	61
4.4.1	Peanut allergy in adults	62
4.4.2	Intolerance to food additives in adults	62
4.5	Time trends and geographic differences	62
4.6	The relationship between IgE mediated food allergy and other IgE mediated allergies	63
4.7	General epidemiology of IgE mediated allergy	64
4.8	Key points	66
5	Pre- and Postnatal Sensitisation to Foods	67
	<i>Professor Mike Kemeny, Dr Anita MacDonald and Professor Ian Kimber</i>	
5.1	Introduction and definition of terms	67
5.1.1	IgE mediated allergy	67
5.2	Factors that influence neonatal sensitisation to food	67
5.2.1	Genetic background	67
5.2.2	Prenatal exposure	68
5.2.3	Antibody responses	69
5.3	Assessment of abnormal immune response	69
5.3.1	Cord blood or term IgE concentration	70
5.3.2	CD4 ⁺ T cell responses to allergens in cord blood	70
5.3.3	CD4 ⁺ T cell responses and IgG antibodies to constituents of food	70
5.4	Trigger foods	70
5.5	Dietary factors in the development of atopy in infants	71
5.6	Maternal diet during pregnancy	71
5.7	Breast feeding	72
5.7.1	Evidence supporting the protective effect of breast milk	72
5.7.2	Evidence against breast feeding	73
5.8	Maternal diet during lactation	74
5.9	Use of protein hydrolysate formula	75
5.10	Introduction of solids	76
5.11	Key points	76

6	Common Food Allergies	77
	<i>Professor Maurice Lessof</i>	
6.1	Introduction	77
6.2	Allergens involved	77
6.3	Diagnosis	78
6.3.1	Misdiagnoses and misconceptions	79
6.4	Clinical features of atopic disease	80
6.4.1	Clinical features of food allergy	80
6.4.2	Childhood eczema	80
6.4.3	Childhood asthma	80
6.4.4	Clinical features in adults	81
6.4.5	The oral allergy syndrome	81
6.5	Foods that cause allergic reactions	82
6.5.1	Allergic reactions to food in young children	83
6.5.2	Peanut allergy	83
6.5.3	Can genetic modification influence allergenicity?	85
6.6	Management of food allergy in childhood	85
6.7	Difficulties in diagnosis and management	87
6.8	Key points	88
7	Other Manifestations of Food Intolerances	89
	<i>Professor Stephan Strobel, Professor Maurice Lessof and Professor Ian Kimber</i>	
7.1	Introduction	89
7.2	Reactions affecting the skin	89
7.2.1	Urticaria and angio-oedema	89
7.3	Reactions affecting the gastrointestinal tract	91
7.3.1	Vomiting	91
7.3.2	Gastro-oesophageal reflux	91
7.3.3	Abdominal pain, distension and flatulence	92
7.3.4	Diarrhoea	92
7.3.5	Bacterial overgrowth	92
7.3.6	Constipation	92
7.4	Enteropathies	92
7.4.1	Allergic eosinophilic gastroenteropathy	92
7.4.2	Infantile colic	93
7.4.3	Irritable bowel syndrome	93
7.5	Respiratory system effects	94
7.5.1	Asthma	94
7.5.2	Rhinitis and conjunctivitis (hay fever)	95
7.5.3	Serous otitis media	95
7.5.4	Milk-induced pulmonary haemosiderosis (Heiner's syndrome)	95
7.6	The central nervous system and behaviour	95
7.6.1	Migraine and food intolerance	95
7.6.2	Migraine and diet	95
7.6.3	Food allergy and migraine	96
7.6.4	Migraine and non-immunologic effects	96
7.6.5	Foods commonly associated with migraine	97
7.7	Evidence of reactions to food in teenagers and adults with mental disorders	98
7.7.1	Children and adolescents	98
7.8	Hyperactivity and attention deficit hyperactivity disorder (ADHD)	98

7.8.1	Studies on attention deficit hyperactivity disorder	99
7.8.2	Studies on the Feingold diet	99
7.8.3	Clinical studies of wider food exclusions	100
7.8.4	Mental illness and gluten sensitivity; schizophrenia	100
7.8.5	Autism	101
7.8.6	Cot death (sudden infant death syndrome, SIDS)	101
7.9	Other clinical symptoms that may be related to adverse effects of foods	102
7.9.1	Enuresis and cystitis	102
7.9.2	Vaginitis/vaginal discharge	102
7.9.3	Athropathy, arthritis	102
7.10	Key points	103
8	Enzyme Defects and Food Intolerance	104
	<i>Dr Judith Buttriss and Dr Ritta Korpela</i>	
8.1	Introduction	104
8.2	The nature of lactose intolerance	104
8.3	Types of lactose intolerance	105
8.3.1	Congenital lactase deficiency	105
8.3.2	Late onset lactase deficiency/lactase non-persistence	105
8.3.3	Secondary lactose intolerance	106
8.4	Prevalence of lactose intolerance	106
8.5	Clinical features of lactose intolerance	107
8.6	Diagnosis of lactose intolerance	107
8.6.1	Lactose maldigestion – reducing substances in stools	107
8.6.2	Lactose maldigestion – breath test	107
8.6.3	Tissue lactase activity	108
8.6.4	Other tests	108
8.7	Treatment of lactose intolerance	108
8.7.1	Secondary lactose intolerance	108
8.7.2	Late onset lactase deficiency	108
8.7.3	Potential for adaptation	110
8.8	Nutritional adequacy of low lactose diets	110
8.9	Hereditary fructose intolerance	111
8.10	Key points	111
9	Coeliac Disease and other Gluten Sensitive Disorders	112
	<i>Dr Julia Ellis</i>	
9.1	Gluten	112
9.2	Manifestations of gluten sensitivity	112
9.3	Gluten sensitive enteropathy	112
9.3.1	Subclinical or silent coeliac disease	113
9.3.2	Latent coeliac disease	113
9.3.3	Transient gluten intolerance	113
9.4	Dermatitis herpetiformis	113
9.5	Prevalence of coeliac disease	114
9.6	Presentation of coeliac disease	114
9.6.1	Infants and children	114
9.6.2	Adults	114
9.7	Diagnosis of coeliac disease	115
9.7.1	Small intestinal biopsy	115

9.7.2	Serum antibody tests	115
9.8	Disease associations	117
9.8.1	Dermatitis herpetiformis	117
9.8.2	Type I (insulin dependent) diabetes and other autoimmune disorders	117
9.8.3	Malignancy	117
9.8.4	Neurological disorders	118
9.8.5	Down's syndrome	119
9.8.6	Epilepsy	119
9.9	Genetics	119
9.10	Epidemiology of coeliac disease	120
9.11	Pathogenesis of coeliac disease	120
9.12	The immune system and coeliac disease	120
9.12.1	Antibody production in the small intestine	120
9.12.2	Cell mediated immunity	121
9.13	Treatment	122
9.14	Compliance with a gluten-free diet	122
9.15	Legislation relating to gluten-free food	123
9.16	The cereals: taxonomy and chemistry	123
9.16.1	Definition of prolamins	123
9.17	Methods for assessing suitability of cereal proteins for gluten sensitive individuals	124
9.17.1	<i>In vivo</i> gluten challenge	124
9.17.2	<i>In vitro</i> tissue culture	124
9.17.3	Tests based on non-human tissue	125
9.18	Which cereals contain gluten?	125
9.19	Which cereals are gluten-free?	125
9.20	What about oats?	125
9.21	Other problematic substances	125
9.21.1	Malt, malt extract, beer and lager	125
9.21.2	Communion wafers	126
9.21.3	Glutenins	126
9.22	Methods of measurement of gluten in foods	126
9.23	The gluten-free diet and new technologies	127
9.24	Does the possibility of immune therapy for coeliac disease exist?	127
9.25	Conclusion	127
9.26	Key points	128
	Appendix A Cereal chemistry	129
	Appendix B Cell mediated immunity and coeliac disease	130
10	Clinically Validated Diagnostic Tests and Non-validated Procedures of Unproven Value	131
	<i>Professor Stephan Strobel</i>	
10.1	Introduction	131
10.2	Procedures of proven value	131
10.2.1	Double-blind placebo-controlled food challenge	131
10.2.2	Skin prick tests	132
10.2.3	Radioallergosorbent test (RAST)	133
10.2.4	Cross-reactivities	133
10.2.5	Summary	133
10.3	Other procedures of proven value for the diagnosis of adverse reactions to foods	133
10.3.1	Endoscopic studies with and without intestinal biopsy	133
10.3.2	Intestinal permeability test	134

10.4	Other tests applied in the diagnosis of food intolerances	134
10.4.1	Respiratory function tests	134
10.5	Non-validated procedures of unproven value	134
10.5.1	Food specific IgG and IgG subclass antibodies	135
10.5.2	Cytotoxicity tests	135
10.5.3	Sublingual, subcutaneous and intradermal provocation and neu	ests 135
10.5.4	Immune complex measurements	135
10.5.5	Electro acupuncture	135
10.5.6	Applied kinesiology and the DRIA test	136
10.5.7	Hair analysis	136
10.5.8	Urine injections	136
10.6	Non-immunologically mediated reactions to foods	136
10.7	Costs of inappropriate treatment to the patient and community	137
10.8	Key points	137
11	Diagnosis and Management of Food Intolerance by Diet	138
	<i>Dr Anita MacDonald</i>	
11.1	Introduction	138
11.2	History and clinical assessment	138
11.3	Clinical and laboratory tests	138
11.4	Diagnostic diets	138
11.4.1	Exclusion diet	139
11.4.2	Empirical diet	139
11.4.3	Few-foods diet	140
11.4.4	Elemental diet	141
11.4.5	Rotation diets	142
11.5	Food challenges	142
11.5.1	Open challenges	142
11.5.2	Double-blind placebo-controlled food challenge (DBPCFC) tests	43
11.6	Milk-free diets	143
11.6.1	Milk substitutes	144
11.7	Egg-free diets	147
11.8	Peanut-free diet	148
11.9	Nutritional hazards of diet therapies	149
11.10	Other pitfalls and problems of diet therapy	150
11.10.1	Risk of anaphylactic reaction during food challenge	150
11.10.2	Cost of diet therapies	150
11.10.3	Psychosocial effects	150
11.10.4	Munchausen's syndrome by proxy	150
11.11	Conclusion	150
11.12	Key points	151
12	Food Allergens and the Food Industry	152
	<i>Johanna Hignett</i>	
12.1	Handling food allergens in manufacturing	152
12.2	Identification of allergens	153
12.3	Good manufacturing practice	153
12.3.1	Allergens and GMP	153
12.3.2	Hazard analysis critical control point studies	154
12.3.3	Cross-contamination	155

12.3.4	Confirmation of the presence of allergens	155
12.3.5	Labelling and communicating the presence of allergens in food	156
12.3.6	Legislation	156
12.4	Food safety legislation	156
12.4.1	Food labelling legislation	156
12.4.2	The 25% rule	157
12.4.3	International trade	157
12.4.4	'May contain' statements	158
12.5	Brand extensions	158
12.6	Promotional activities	158
12.7	Labelling and handling allergens in the catering environment	159
12.8	Additional communication initiatives	159
12.8.1	Food intolerance databanks	161
12.9	Manufacturing foods with reduced levels of allergens	161
12.9.1	Foods inherently free of an allergen	161
12.9.2	Foods manufactured to be free from an allergen	161
12.9.3	Hypoallergenic foods	162
12.10	Summary	163
12.11	Key points	164
13	Immunomodulation of Food Allergies	165
	<i>Dr Gideon Lack</i>	
13.1	Background	165
13.2	Immunology	166
13.3	Novel treatment strategies	167
13.3.1	Exploiting cross-reactivity between allergens	167
13.3.2	Monoclonal antibody to IgE	167
13.3.3	Immunomodulatory cytokines	167
13.3.4	DNA vaccines	168
13.3.5	Engineered allergens	168
13.3.6	Peptide vaccines	168
13.4	Conclusions	169
13.5	Key points	169
14	Conclusions of the Task Force	170
14.1	Chapter 1	170
14.2	Chapter 2	171
14.3	Chapter 3	171
14.4	Chapter 4	172
14.5	Chapter 5	172
14.6	Chapter 6	173
14.7	Chapter 7	173
14.8	Chapter 8	173
14.9	Chapter 9	174
14.10	Chapter 10	175
14.11	Chapter 11	175
14.12	Chapter 12	175
14.13	Chapter 13	176

15 Recommendations of the Task Force	177
15.1 General recommendations	177
15.2 Recommendations for research priorities	178
15.2.1 Sensitisation to food allergens and understanding food allergy	178
15.2.2 Epidemiology of food intolerance	178
15.2.3 Coeliac disease	179
15.2.4 Other forms of food intolerance	179
15.2.5 Diagnosis	180
15.2.6 Dietary management of food intolerance	180
16 Questions on Food Allergy and Intolerance	181
Definitions of food allergy and intolerance	181
Prevalence of food allergy and intolerance	183
Common causes of food allergy and food intolerance	184
Diagnosis and treatment	185
Appendix 1 Food Additives	189
Glossary	191
Abbreviations	194
References	195
