

# **AUTOMATIC CONTROL FOR FOOD PROCESSING SYSTEMS**

**ROSANA G. MOREIRA**

AN ASPEN PUBLICATION

# Contents

|                                                            |           |
|------------------------------------------------------------|-----------|
| <b>Foreword</b> .....                                      | <b>ix</b> |
| <b>Preface</b> .....                                       | <b>xi</b> |
| <b>Chapter 1—Introduction</b> .....                        | <b>1</b>  |
| The State of the Food Industry .....                       | 1         |
| Control Schemes in the Food Processing Industry .....      | 4         |
| Automatic Control Strategies for the Food Industry .....   | 4         |
| Future Trends .....                                        | 6         |
| Conclusion .....                                           | 7         |
| <b>Chapter 2—Food Processing Systems</b> .....             | <b>9</b>  |
| Food Extrusion Process .....                               | 9         |
| Continuous Deep-Fat Frying Process .....                   | 17        |
| High-Capacity Continuous-Flow Grain-Drying Process .....   | 21        |
| Multi-Effect Evaporators .....                             | 24        |
| Brew Kettle Operations .....                               | 26        |
| Pasteurization Systems .....                               | 28        |
| Conclusion .....                                           | 31        |
| <b>Chapter 3—Background</b> .....                          | <b>34</b> |
| Definitions of Basic Concepts .....                        | 34        |
| The Control Problem .....                                  | 36        |
| Laplace Transform .....                                    | 38        |
| Block Diagram and Transfer Functions .....                 | 39        |
| Closed-Loop and Feedback Control Systems .....             | 40        |
| Open-Loop and Feedforward Control Systems .....            | 56        |
| Closed-Control System Design for Linear SISO Systems ..... | 66        |
| Advanced Control .....                                     | 79        |
| Conclusion .....                                           | 86        |
| Appendix 3-A: Laplace Transform .....                      | 89        |
| Appendix 3-B: Routh's Stability Criterion .....            | 97        |
| Appendix 3-C: Root Locus .....                             | 103       |

|                                                                          |            |
|--------------------------------------------------------------------------|------------|
| <b>Chapter 4—Process Dynamics Modeling</b>                               | <b>106</b> |
| Types of Processes                                                       | 106        |
| Discrete-Time Variables and Models                                       | 110        |
| Process Dynamics Modeling and Identification                             | 114        |
| Nonlinear Modeling                                                       | 134        |
| Conclusion                                                               | 135        |
| Appendix 4-A: Discrete Time Variables                                    | 137        |
| Appendix 4-B: The z-Transform                                            | 140        |
| Appendix 4-C: Recursive Parameter Estimation in an Open Loop             | 148        |
| Appendix 4-D: Pseudorandom Binary Signals (PRBSs)                        | 154        |
| <b>Chapter 5—Multivariable Systems</b>                                   | <b>158</b> |
| Interacting Loops                                                        | 158        |
| Bristol's Relative Gain Array                                            | 161        |
| Reducing Interactions                                                    | 166        |
| Decoupling                                                               | 169        |
| Multivariable Control                                                    | 172        |
| State-Space Representation of Systems                                    | 172        |
| Optimal Control                                                          | 176        |
| Conclusion                                                               | 179        |
| <b>Chapter 6—Model Predictive Control</b>                                | <b>182</b> |
| Introduction                                                             | 182        |
| The MPC Idea                                                             | 184        |
| The Model                                                                | 186        |
| The Control Problem                                                      | 186        |
| Process Constraints                                                      | 187        |
| Dynamic Matrix Control (DMC)                                             | 189        |
| The Generalized Predictive Control (GPC)                                 | 195        |
| The Internal Model Control (IMC)                                         | 202        |
| Nonlinear Model Predictive Control (NMPC)                                | 212        |
| Conclusion                                                               | 215        |
| Appendix 6-A: Convolution Model                                          | 217        |
| <b>Chapter 7—Adaptive Control</b>                                        | <b>222</b> |
| Introduction                                                             | 222        |
| Self-Tuning Controllers (STCs)                                           | 223        |
| Model Reference Adaptive Controllers (MRACs)                             | 225        |
| Parameter Adaptive Controller Design                                     | 225        |
| Performance Monitoring                                                   | 237        |
| Applications of Adaptive Control                                         | 241        |
| Commercially Available Adaptive Controllers                              | 246        |
| Conclusion                                                               | 248        |
| <b>Chapter 8—Statistical Process Control and Intelligent Controllers</b> | <b>251</b> |
| Statistical Process Control                                              | 252        |

|                              |     |
|------------------------------|-----|
| Fuzzy Controllers .....      | 260 |
| Neural Network Control ..... | 279 |
| Expert Control .....         | 289 |
| Conclusion .....             | 291 |

|                                        |            |
