

Diffusion of Reactive Molecules in Solids and Melts

ROBERT H. DOREMUS

CONTENTS

Preface	xi
1 Introduction	1
1.1 Importance	1
1.2 Defects	2
1.3 Diffusion–Reaction Mechanisms	3
1.4 Outline of the Book	4
1.5 Omissions	7
References	8
2 Diffusion Without Chemical Reaction	9
2.1 Introduction	9
2.2 Fundamental Diffusion Equations	9
2.3 <i>Infinite and Semi-Infinite Geometries</i>	12
2.4 Plane Sheet	14
2.5 Permeation Through a Membrane	16
2.6 Diffusion Coefficient a Function of Concentration	19
References	22
3 Diffusion and Reaction with Local Equilibrium	23
3.1 Introduction	23
3.2 Reaction Experiments	24
3.3 Exchange Experiments	27
3.4 Pressure Effects	29

3.5 Moving Boundary-Tarnishing Reactions	30
References	35
4 Diffusion and Nonequilibrium Reactions	36
4.1 Introduction	36
4.2 No Local Equilibrium, Forward Reaction Only	37
4.3 No Local Equilibrium, First-Order Forward and Reverse Reactions	42
4.4 No Equilibrium, First-Order Forward Reaction, Second-Order Reverse Reaction	49
4.5 No Local Equilibrium, Tracer Diffusion	52
4.6 Time Ranges of Validity of Equations	54
4.7 Surface Exchange	55
References	57
Appendix: Error Functions of Complex Argument	57
5 Structure and Sizes of Atoms and Molecules	59
5.1 Introduction	59
5.2 Electron Distributions Around Atoms and Molecules	60
5.3 Sizes of Gaseous Atoms and Molecules Dissolved in Solids and Melts	62
5.4 Sizes of Ions in Solids and Melts, and Openness of Solid Structures	68
5.5 Monoxides	70
References	72
6 Diffusion and Reaction of Water in Silica Glass	74
6.1 Introduction	74
6.2 Structure of Silica Glass	76
6.3 Gas Solubility in Silica Glass	78
6.4 Experiments of Roberts and Co-Workers at Temperatures of 700 to 1200°C	80
6.5 Experiments of Spitzer and Ligenza at 650°C, and Rigo <i>et al.</i> from 400 to 900°C	86
6.6 Experiments of Wakabayashi and Tomozawa at 350 and 450°C	90
6.7 Experiments of Rauch <i>et al.</i> and Lanford <i>et al.</i> at Temperatures of 200 to 90°C	91
6.8 Discussion	93
References	94
7 Diffusion, Reaction, and Exchange of Water in Quartz	96
7.1 Introduction	96
7.2 Structure of Quartz	97

7.3 Experiments of Kats on Hydrogen–Deuterium Exchange	98
7.4 Experiments on ^{18}O – ^{16}O Exchange	101
7.5 Experiments of Dersch and Rauch at Temperatures of 200°C and Lower	104
7.6 Discussion	106
References	107
8 Diffusion and Reaction of Water in Rhyolite Glass (Obsidian)	108
8.1 Introduction	108
8.2 Diffusion–Reaction Model	109
8.3 Analysis of High-Temperature Diffusion Profiles	111
8.4 Analysis of Low-Temperature Profiles	114
8.5 Discussion	117
References	118
Appendix	118
9 Diffusion and Reaction of Water in Oxides	120
9.1 Introduction	120
9.2 Equations	121
9.3 Diffusion of Water in Pyrope and Calcite	122
9.4 Comparison of Experimental Activation Energies for Diffusion of Water in Oxides with Ionic Porosity	124
References	127
10 Speciation of Water in Silicate Glasses and Melts	129
10.1 Introduction	129
10.2 Langmuir Model for Speciation	130
10.3 Comparison with Experiment	132
10.4 Solubility of Water	136
10.5 Partial Molar Volume	140
10.6 Discussion	145
References	145
11 Hydrogen in Oxides	148
11.1 Introduction	148
11.2 Hydrogen in Silica Glass	149
11.3 Hydrogen in Fiber Optic Cables of Silica	154
11.4 Hydrogen in Multicomponent Silicate Glasses	158
11.5 Hydrogen in Crystalline Oxides	159
References	160
12 Diffusion of Oxygen in Nominally Dry Oxides	163
12.1 Introduction	163
12.2 Diffusion of Oxygen in Silica Glass	164

12.3	Molecular Transport of Oxygen	170
12.4	Oxygen Transport by Ions	172
12.5	Experimental Activation Energies	175
12.6	Further Considerations of Mechanisms	177
12.7	Diffusion of Oxygen in Nominally Dry Silicate Melts	180
	References	182
13	Oxidation State	185
13.1	Introduction	185
13.2	Dissolved Gases	186
13.3	Metals and Oxygen	193
13.4	Ions with Multiple Valence States and the Phase Rule	193
13.5	Oxidation with Transport of Cations	197
	References	198
14	Diffusion in Silicon: Fast and Intermediate Diffusers	199
14.1	Introduction	199
14.2	Classification of Diffusing Atoms	200
14.3	Interstitials, Vacancies, and Fast Diffusers in Silicon	202
14.4	Exchange or Kick-Out Mechanism and Diffusion of Intermediate Diffusers in Single-Crystal, Dislocation-Free Silicon	205
14.5	Influence of Dislocations in Silicon on Intermediate Diffusers	214
14.6	Diffusion in Amorphous Silicon	215
14.7	Summary and Subsequent Chapters	216
	References	217
15	Diffusion of Hydrogen in Silicon	219
15.1	Introduction	219
15.2	Mechanisms of Hydrogen Diffusion in Silicon	220
15.3	Equations	223
15.4	Comparison with Experiments	229
15.5	Discussion	237
	References	239
16	Diffusion of Oxygen and Silicon in Silicon: Silicon Monoxide Model	241
16.1	Introduction	241
16.2	Structure of Dissolved SiO	244
16.3	Infrared Spectra and Dichroism	245
16.4	Diffusion of Oxygen, Infrared Dichroism, and Internal Friction	246
16.5	Fast Diffusion of Oxygen	247
16.6	Diffusion of Silicon	248

16.7 Conclusions	250
References	250
17 Diffusion of Group III, IV, and V Elements in Silicon	253
17.1 Introduction	253
17.2 Diffusion Coefficients and Activation Energies for Group III, IV, and V Elements	254
17.3 Mechanisms of Diffusion and Reaction	258
17.4 Concentration Dependence of Effective Diffusion Coefficients of Group III and V Elements in Silicon	262
17.5 Internal Friction of Silicon	267
17.6 Influence of Other Factors on Dopant Diffusion in Silicon	268
References	270
18 Diffusion in Germanium	273
18.1 Introduction	273
18.2 Measurements of Diffusion Coefficients in Germanium and Silicon	274
18.3 Diffusion Profiles in Germanium	275
18.4 Mechanisms of Diffusion in Germanium	279
References	281
Appendix	283
Author Index	285
Subject Index	291
