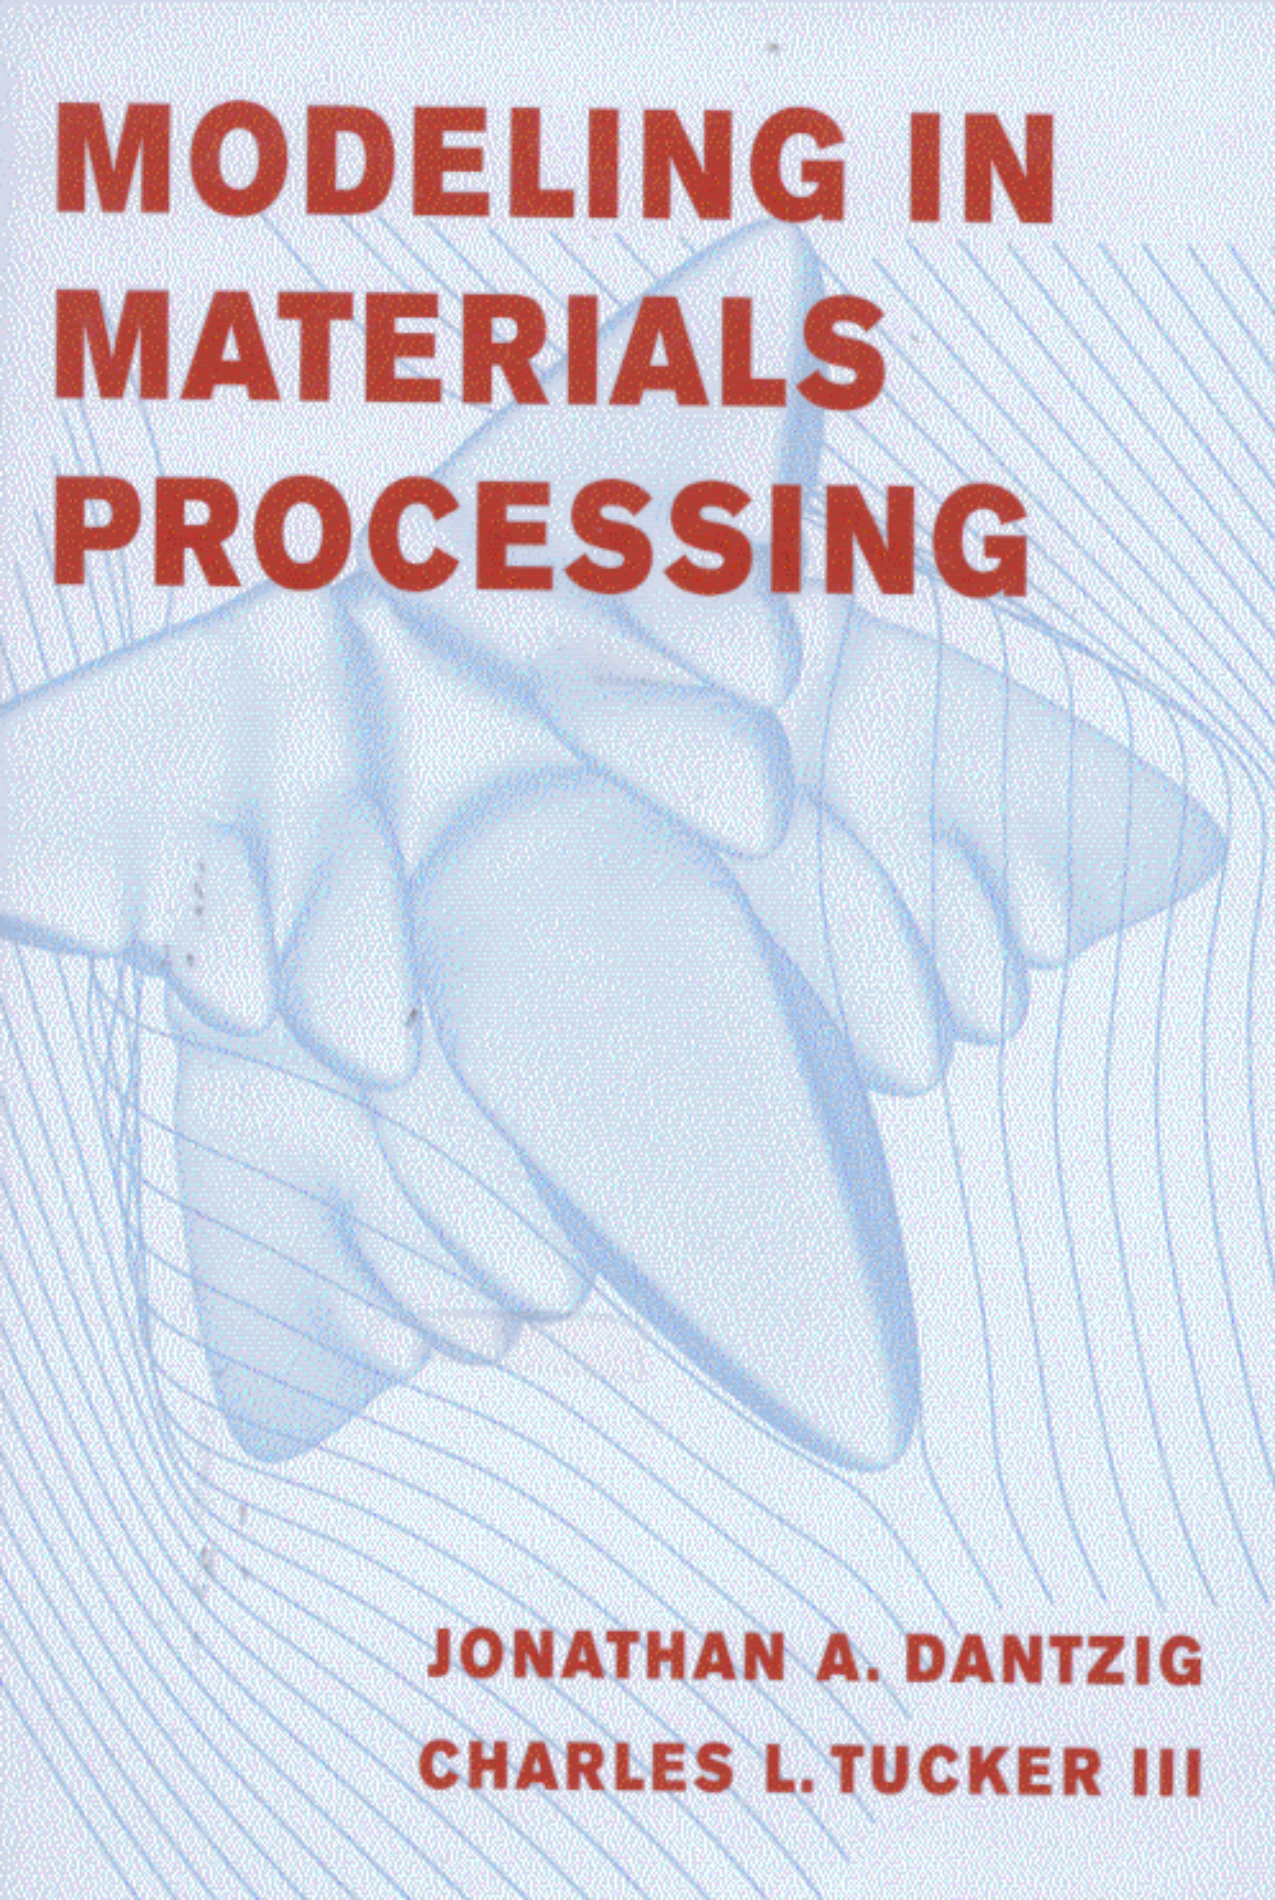
MODELING IN MATERIALS PROCESSING



JONATHAN A. DANTZIG
CHARLES L. TUCKER III

Contents

Preface *page* ix

Principal Nomenclature xi

1 Introduction 1
- 1.1 What Is a Model? 1
- 1.2 A Simple Pendulum 2
- 1.3 One-Dimensional Traffic Flow 6
- 1.4 Summary 19
- Bibliography 19
- Exercises 20

2 Governing Equations 24
- 2.1 Preliminaries 24
- 2.2 Mass Balance 29
- 2.3 Momentum Balance 33
- 2.4 Energy Balance 45
- 2.5 Summary 52
- Bibliography 53
- Exercises 53
- Appendix 58

3 Scaling and Model Simplification 60
- 3.1 Introduction 60
- 3.2 Basic Scaling Analysis 62
- 3.3 Small Parameters and Boundary Layers 69
- 3.4 Classical Dimensionless Groups 76
- 3.5 Nondimensionalization for Numerical Solutions (Advanced) 78
- 3.6 Summary 81
- Bibliography 81
- Exercises 81

4 Heat Conduction and Materials Processing 87
- 4.1 Steady Heat Conduction in Solids 90
- 4.2 Transient Heat Conduction 93
- 4.3 Conduction with Phase Change 106

4.4 Summary 120
Bibliography 121
Exercises 121
Appendix 130

5 Isothermal Newtonian Fluid Flow 132
5.1 Newtonian Flow in a Thin Channel 132
5.2 Other Slow Newtonian Flows 143
5.3 Free Surfaces and Moving Boundaries 149
5.4 Flows with Significant Inertia 161
5.5 Summary 177
Bibliography 178
Exercises 178

6 Non-Newtonian Fluid Flow 190
6.1 Non-Newtonian Behavior 190
6.2 The Power Law Model 192
6.3 Power Law Solutions for Other Simple Geometries 200
6.4 Principles of Non-Newtonian Constitutive Equations 202
6.5 More Non-Newtonian Constitutive Equations 209
6.6 The Generalized Hele–Shaw Approximation 217
6.7 Summary 228
Bibliography 228
Exercises 229

7 Heat Transfer with Fluid Flow 239
7.1 Uncoupled Advection 239
7.2 Temperature-Dependent Viscosity and Viscous Dissipation 250
7.3 Buoyancy-Driven Flow 259
7.4 Summary 275
Bibliography 275
Exercises 276

8 Mass Transfer and Solidification Microstructures 282
8.1 Governing Equations for Diffusion 282
8.2 Solid-State Diffusion 285
8.3 Solidification Microstructure Development 295
8.4 Summary 319
Bibliography 320
Exercises 321

A Mathematical Background 327
A.1 Scalars, Vectors, and Tensors: Definitions and Notation 327
A.2 Vector and Tensor Algebra 331
A.3 Differential Operations in Rectangular Coordinates 335
A.4 Vectors and Tensors in Cylindrical and Spherical Coordinates 337
A.5 The Divergence Theorem 339
A.6 Curvature of Curves and Surfaces 339
A.7 The Gaussian Error Function 343
Bibliography 345
Exercises 345

B Balance and Kinematic Equations 348
B.1 Continuity Equation: General Form 348
B.2 Continuity Equation: Constant ρ 348

B.3 Rate-of-Deformation Tensor 349
B.4 Vorticity Tensor 350
B.5 General Equation of Motion 350
B.6 Navier–Stokes Equation: Constant ρ and μ 352
B.7 Heat Flux Vector: Isotropic Material 353
B.8 Energy Balance: General Form 354
B.9 Energy Balance: Constant ρ, k, and μ 355
Bibliography 356
