

FERMENTATION AND FOOD SAFETY

MARTIN R. ADAMS • M. J. ROBERT NOUT

AN ASPEN PUBLICATION

Contents

Contributors	vii
Foreword	ix
Preface	xi
Chapter 1— Fermented Foods and Their Production	1
<i>M.J. Robert Nout</i>	
Fermentation and Food Safety	1
Food Fermentation Components	4
Diversity of Fermented Foods	13
Process Unit Operations	15
Process Conditions	17
Appendix 1–A: Flow Diagrams for Selected Food Fermentations	20
Chapter 2— Why Fermented Foods Can Be Safe	39
<i>Martin R. Adams</i>	
Introduction	39
Physical Processing	39
Microbial Activity	41
Overall Significance of Different Antimicrobial Factors	48
Chapter 3— An Introduction to the Hazard Analysis and Critical Control Point (HACCP) System and Its Application to Fermented Foods	53
<i>Yasmine Motarjemi</i>	
Introduction	53
Historical Development	53
The Need for Change	54
What Is the HACCP System?	55
Benefits of the HACCP System	56
Areas of Application	56

The HACCP System in Food Hygiene	57
Application of the HACCP Approach to Food Preparation	58
Application of the HACCP System to Gari	60
Appendix 3—A: HACCP Principles and Guidelines for Its Application	67
Chapter 4— Chemical Hazards and Their Control: Endogenous Compounds	71
<i>Leon Brimer</i>	
Introduction	71
Toxic and Antinutritional Glycosides in Food and Feed	71
Risks Associated with the Occurrence of Toxic Glycosides in Different Commodities	77
Variation in Toxin Concentration among Varieties and Cultivars: The Influence of Traditional Domestication and Modern Breeding	83
Removal of Toxins through Processing	84
Conclusion	88
Chapter 5— Chemical Hazards and Their Control: Toxins	101
<i>Maurice O. Moss</i>	
Microbial Toxins	101
Aflatoxins	102
Ochratoxin A	105
Patulin	107
<i>Fusarium</i> Toxins	108
<i>Alternaria</i> Toxins	111
Bacterial and Algal Toxins	112
Chapter 6— Toxic Nitrogen Compounds Produced during Processing: Biogenic Amines, Ethyl Carbamides, Nitrosamines	119
<i>M. Hortensia Silla-Santos</i>	
Introduction	119
Biogenic Amines	119
Ethyl Carbamides	126
Nitrosamines	129
Chapter 7— Microbiological Hazards and Their Control: Bacteria	141
<i>R.R. Beumer</i>	
Introduction	141
Outbreaks Related to Fermented Products	141
Bacterial Pathogens of Concern in Fermented Products	142
Presence of Pathogens in Raw Materials	146
Effect of Fermentation Processes on the Survival of Bacterial Pathogens	147
The Control of Microbial Hazards	148
HACCPs	150
Validation of the Sausage Fermentation Process for the Control of Pathogens	152

Chapter 8— Microbiological Hazards and Their Control: Viruses	159
<i>Michael J. Carter and Martin R. Adams</i>	
Introduction	159
Food-Borne Viruses	160
Potentially Food-Borne Viruses	163
Assessment of Virus Risk	168
Chapter 9— Microbiological Hazards and Their Control: Parasites	175
<i>Mike Taylor</i>	
Introduction	175
Nematodes	175
Cestodes (Tapeworms)	187
Trematodes (Flukes)	192
Protozoa	200
Conclusion	211
Chapter 10— Biotechnology and Food Safety: Benefits of Genetic Modifications	219
<i>T. Verrips</i>	
Introduction	219
Supply Chain of Fermented Foods and Its Importance To Ensure Safe Products	221
Two Sets of Examples of Safety Evaluation of Fermented Foods for Which Recombinant DNA Is Used	229
Conclusion	236
Chapter 11— Safety Assessment of Probiotics and Starters	239
<i>Seppo J. Salminen, Atte J. von Wright, Arthur C. Ouwehand, and Wilhelm H. Hozapfel</i>	
Safety Aspects for Probiotics and Biotechnology	239
Safety of Current Probiotics	242
Relevance of a Sound Taxonomic Basis	242
Transfer of Antibiotic Resistance	246
Genetically Modified Organisms	246
Conclusion	247
Chapter 12— Practical Applications: Prospects and Pitfalls	253
<i>Yasmine Motarjemi, A. Asante, Martin R. Adams, and M.J. Robert Nout</i>	
Introduction	253
Benefits of Lactic Acid Fermentation	254
Pitfalls of Fermentation	255
Importance of Food Fermentation in Public Health	257

Practical Intervention To Enhance Safety of Fermented Foods	259
Research Needs	271
Conclusion	271
List of Sources	275
Index	279
