CONTENTS

PREFACE	<i>vii</i>
INTRODUCTION	<i>xiii</i>
BASIC CONCEPTS AND NOTATION	<i>xvii</i>
1 FUNCTION SPACES	1
1.1 Admissible Topologies	1
1.2 Compact-Open Topology	2
1.3 The Exponential Law	3
2 CONNECTEDNESS AND ALGEBRAIC INVARIANTS	9
2.1 Path Connectedness	9
2.2 Homotopy Classes	10
2.3 Topological Groups	13
2.4 Homotopy of Mappings of the Circle into Itself	15
2.5 The Fundamental Group	28
2.6 The fundamental Group of the Circle	41
2.7 H -Spaces	45
2.8 Loop Spaces	48
2.9 H -Cospaces	50
2.10 Suspensions	53

3	HOMOTOPY GROUPS	59
3.1	Attaching Spaces; Cylinders and Cones	59
3.2	The Seifert-van Kampen Theorem	63
3.3	Homotopy Sequences I	72
3.4	Homotopy Groups	80
3.5	Homotopy Sequences II	84
4	HOMOTOPY EXTENSION AND LIFTING PROPERTIES	89
4.1	Cofibrations	89
4.2	Some Results on Cofibrations	95
4.3	Fibrations	101
4.4	Pointed and Unpointed Homotopy Classes	119
4.5	Locally Trivial Bundles	125
4.6	Classification of Covering Maps over Paracompact Spaces .	138
5	CW-COMPLEXES AND HOMOLOGY	149
5.1	CW-Complexes	149
5.2	Infinite Symmetric Products	167
5.3	Homology Groups	176
6	HOMOTOPY PROPERTIES OF CW-COMPLEXES	189
6.1	Eilenberg-Mac Lane and Moore Spaces	189
6.2	Homotopy Excision and Related Results	193
6.3	Homotopy Properties of the Moore spaces	201
6.4	Homotopy Properties of the Eilenberg-Mac Lane spaces . .	217

7 COHOMOLOGY GROUPS AND RELATED TOPICS	227
7.1 Cohomology Groups	227
7.2 Multiplication in Cohomology	238
7.3 Cellular Homology and Cohomology	243
7.4 Exact Sequences in Homology and Cohomology	252
8 VECTOR BUNDLES	259
8.1 Vector Bundles	259
8.2 Projections and Vector Bundles	268
8.3 Grassmann Manifolds and Universal Bundles	271
8.4 Classification of Vector Bundles of Finite Type	276
8.5 Classification of Vector Bundles over Paracompact Spaces	279
9 K-THEORY	289
9.1 Grothendieck Construction	289
9.2 Definition of $K(B)$	292
9.3 $\tilde{K}(B)$ and Stable Equivalence of Vector Bundles	295
9.4 Representations of $K(B)$ and $\tilde{K}(B)$	299
9.5 Bott Periodicity and Applications	302
10 ADAMS OPERATIONS AND APPLICATIONS	309
10.1 Definition of the Adams Operations	309
10.2 The Splitting Principle	313
10.3 Normed Algebras	315
10.4 Division Algebras	317
10.5 Multiplicative Structures on $\mathbb{R}^n$ and on $\mathbb{S}^{n-1}$	319
10.6 The Hopf Invariant	321

11 RELATIONS BETWEEN COHOMOLOGY AND VECTOR BUNDLES	331
11.1 Contractibility of S^∞	332
11.2 Description of $K(\mathbb{Z}/2, 1)$	334
11.3 Classification of Real Line Bundles	337
11.4 Description of $K(\mathbb{Z}, 2)$	340
11.5 Classification of Complex Line Bundles	343
11.6 Characteristic Classes	345
11.7 Thom Isomorphism and Gysin Sequence	349
11.8 Construction of Characteristic Classes and Applications	366
 12 COHOMOLOGY THEORIES AND BROWN REPRESENTABILITY	 383
12.1 Generalized Cohomology Theories	383
12.2 Brown Representability Theorem	394
12.3 Spectra	406
 A PROOF OF THE DOLD-THOM THEOREM	 421
A.1 Criteria for Quasifibrations	421
A.2 Symmetric Products	431
A.3 Proof of the Dold-Thom Theorem	434
 B PROOF OF THE BOTT PERIODICITY THEOREM	 437
B.1 A Convenient Description of $BU \times \mathbb{Z}$	437
B.2 Proof of the Bott Periodicity Theorem	440
