INTERNATIONAL EDITION

ETAILED CONTENTS

Summary List of Special Features: Chemical Connections; Tools of the Laboratory; Galleries; Animations; and Margin Notes xiv

About the Author and Consultants xvii

Preface xix

Guided Tour xxii

Acknowledgments xxix

A Note to the Student: How to Do Well in This

Course xxxii

Keys to the Study of Chemistry 1

Some Fundamental Definitions 3

The Properties of Matter 3 The Three States of Matter 4

The Central Theme in Chemistry 6

The Importance of Energy in the Study of Matter 6

1.2 Chemical Arts and the Origins of Modern Chemistry 8

Prechemical Traditions 8

The Phlogiston Fiasco and the Impact of Lavoisier 10

The Scientific Approach: Developing 1.3 a Model 11

Chemical Problem Solving 13

Units and Conversion Factors in Calculations 13 A Systematic Approach to Solving Chemistry Problems 15

Measurement in Scientific Study 17 1.5

General Features of SI Units 17

Some Important SI Units in Chemistry 18

Uncertainty in Measurement: Significant 1.6 Figures 27

> Determining Which Digits Are Significant 28 Working with Significant Figures in Calculations 28 Precision, Accuracy, and Instrument Calibration 31

> > CHEMISTRY PROBLEM

SOLVING IN THE REAL WORLD 32

Chapter Perspective 33 For Review and Reference 34 Problems 35

The Components of Matter 40

Elements, Compounds, and Mixtures: An Atomic Overview 41

2.2 The Observations That Led to an Atomic View of Matter 43

Mass Conservation 43 Definite Composition 44 Multiple Proportions 45

2.3 **Dalton's Atomic Theory 46**

Postulates of the Atomic Theory 46 How the Theory Explains the Mass Laws 46 The Relative Masses of Atoms 47

2.4 The Observations That Led to the Nuclear Atom Model 48

> Discovery of the Electron and Its Properties 48 Discovery of the Atomic Nucleus 50

2.5 The Atomic Theory Today 51

Structure of the Atom 51

Atomic Number, Mass Number, and Atomic Symbol 52 Isotopes and Atomic Masses of the Elements 52

Tools of the Laboratory MASS SPECTROMETRY 54

A Modern Reassessment of the Atomic Theory 55

2.6 Elements: A First Look at the Periodic Table 56

2.7 Compounds: Introduction to Bonding 59 The Formation of Ionic Compounds 59

> The Formation of Covalent Compounds 62 Polyatomic Ions: Covalent Bonds Within Ions 63

2.8 Compounds: Formulas, Names, and Masses 63

Types of Chemical Formulas 64

Some Advice About Learning Names and Formulas 64

Names and Formulas of Ionic Compounds 65 Names and Formulas of Binary Covalent Compounds 70

Molecular Masses from Chemical Formulas 71

MOLECULES 73

Mixtures: Classification and Separation 74

Tools of the Laboratory BASIC SEPARATION TECHNIQUES 75

> Chapter Perspective 77 For Review and Reference 78 Problems 79

Stoichiometry: Mole-Mass-Number Relationships in Chemical Systems 86

The Mole 87

Defining the Mole 87

Molar Mass 89

Interconverting Moles, Mass, and Number of Chemical Entities 90

Mass Percent from the Chemical Formula 93

Determining the Formula of an Unknown Compound 95

Empirical Formulas 95

Molecular Formulas 96 Combustion Analysis 98

Chemical Formulas and the Structures of Molecules 99

Writing and Balancing Chemical Equations 101 Calculating Amounts of Reactant and 3.4

Product 105

Stoichiometrically Equivalent Molar Ratios from the Balanced Equation 106

Chemical Reactions That Occur in a Sequence 108

Chemical Reactions That Involve a Limiting Reactant 110

Chemical Reactions in Practice: Theoretical, Actual, and Percent Yields 112

3.5 Fundamentals of Solution Stoichiometry 114

Expressing Concentration in Terms of Molarity 114 Mole-Mass-Number Conversions Involving Solutions 115 Preparing and Diluting Molar Solutions 116

Stoichiometry of Chemical Reactions in Solution 118

Chapter Perspective 120

For Review and Reference 120 Problems 123

The Major Classes of Chemical Reactions 131

- 4.1 The Role of Water as a Solvent 132 The Solubility of Ionic Compounds 132 The Polar Nature of Water 134
- Writing Equations for Aqueous Ionic 4.2 Reactions 137
- Precipitation Reactions 138

The Driving Force for a Precipitation Reaction 138 Predicting Whether a Precipitation Reaction Will Occur 139

Acid-Base Reactions 140

The Driving Force and Net Change: Formation of H2O from H⁺ and OH⁻ 141 Acid-Base Titrations 143

Acid-Base Reactions as Proton-Transfer Processes 144

Oxidation-Reduction (Redox) Reactions 146

The Driving Force for Redox Processes 147 Some Essential Redox Terminology 148 Using Oxidation Numbers to Monitor the Movement of Electron Charge 148

Balancing Redox Equations 150

Redox Titrations 152

- Elemental Substances in Redox Reactions 154
- Reversible Reactions: An Introduction to Chemical Equilibrium 162

Chapter Perspective 164 For Review and Reference 164 Problems 166

Gases and the Kinetic-Molecular Theory 173

- An Overview of the Physical States of 5.1
- Gas Pressure and Its Measurement 176 5.2 Laboratory Devices for Measuring Gas Pressure 176 Units of Pressure 178
- The Gas Laws and Their Experimental 5.3 Foundations 180

The Relationship Between Volume and Pressure: Boyle's Law 180

The Relationship Between Volume and Temperature: Charles's Law 181

The Relationship Between Volume and Amount: Avogadro's Law 183

Gas Behavior at Standard Conditions 184 The Ideal Gas Law 185

Solving Gas Law Problems 186

Further Applications of the Ideal Gas Law 189 5.4 The Density of a Gas 189

The Molar Mass of a Gas 191 The Partial Pressure of a Gas in a Mixture of Gases 192

- 5.5 The Ideal Gas Law and Reaction Stoichiometry 195
- The Kinetic-Molecular Theory: A Model for 5.6 Gas Behavior 197

How the Kinetic-Molecular Theory Explains the Gas Laws 197

Effusion and Diffusion 201

The Chaotic World of Gases: Mean Free Path and Collision Frequency 203

Chemistry in Planetary Science: STRUCTURE AND COMPOSITION OF THE EARTH'S ATMOSPHERE 204

Real Gases: Deviations from Ideal 5.7 Behavior 207

Effects of Extreme Conditions on Gas Behavior 207 The van der Waals Equation: The Ideal Gas Law Redesigned 209

Chapter Perspective 210 For Review and Reference 210 Problems 212

Thermochemistry: Energy Flow and Chemical Change 220

Forms of Energy and Their Interconversion 221 The System and Its Surroundings 221

Energy Flow to and from a System 222 Heat and Work: Two Forms of Energy Transfer 223

The Law of Energy Conservation 225

Units of Energy 225
State Functions and the Path Independence of the Energy
Change 226

2 Enthalpy: Heats of Reaction and Chemical Change 228

Comparing ΔE and ΔH 228 Exothermic and Endothermic Processes 229 Some Important Types of Enthalpy Change 230

Changes in Bond Strengths, or Where Does the Heat of Reaction Come From? 230

6.3 Calorimetry: Laboratory Measurement of Heats of Reaction 233

Specific Heat Capacity 233
The Practice of Calorimetry 234

The Meaning of Enthalpy 228

6.4 Stoichiometry of Thermochemical Equations 236

6.5 Hess's Law of Heat Summation 238

6.6 Standard Heats of Reaction (ΔH_{rxn}^0) 240

Formation Equations and Their Standard Enthalpy Changes 240

Determining $\Delta H_{\rm rxn}^0$ from $\Delta H_{\rm f}^0$ Values of Reactants and Products 241

Chemistry in Environmental

Science: THE FUTURE OF ENERGY USE 243 Chapter Perspective 245

Chapter Perspective 245 For Review and Reference 246 Problems 247

Quantum Theory and Atomic Structure 254

7.1 The Nature of Light 255
The Wave Nature of Light 256
The Particle Nature of Light 260

7.2 Atomic Spectra 262
The Bohr Model of the Hydrogen Atom 263
Limitations of the Bohr Model 264

The Energy States of the Hydrogen Atom 264

Tools of the Laboratory SPECTROPHOTOMETRY IN CHEMICAL ANALYSIS 267

7.3 The Wave-Particle Duality of Matter and Energy 269

The Wave Nature of Electrons and the Particle Nature of Photons 269

The Heisenberg Uncertainty Principle 272

7.4 The Quantum-Mechanical Model of the Atom 273

The Atomic Orbital and the Probable Location of the Electron 273

Quantum Numbers of an Atomic Orbital 275

Shapes of Atomic Orbitals 278

Energy Levels of the Hydrogen Atom 281

Chapter Perspective 281

For Review and Reference 281 Problems 283

Electron Configuration and Chemical Periodicity 288

8.1 Development of the Periodic Table 289

8.2 Characteristics of Many-Electron Atoms 290
The Electron-Spin Quantum Number 290
The Exclusion Principle 291
Electrostatic Effects and the Splitting of Energy
Levels 292

8.3 The Quantum-Mechanical Model and the Periodic Table 295

Building Up Periods 1 and 2 295

Building Up Period 3 298

Electron Configurations Within Groups 299

The First d-Orbital Transition Series: Building Up Period 4 299

General Principles of Electron Configurations 301 Complex Patterns: The Transition and Inner Transition Elements 302

8.4 Trends in Some Key Periodic Atomic Properties 304

Trends in Atomic Size 304 Trends in Ionization Energy 307 Trends in Electron Affinity 310

8.5 The Connection Between Atomic Structure and Chemical Reactivity 311

Trends in Metallic Behavior 311 Properties of Monatomic Ions 314 Chapter Perspective 320

For Review and Reference 320 Problems 321

9.1 Atomic Properties and Chemical Bonds 327 Types of Chemical Bonding 327 Lewis Electron-Dot Symbols: Depicting Atoms in Chemical Bonding 329

9.2 The Ionic Bonding Model 330

Compounds 335

Energy Considerations in Ionic Bonding: The Importance of Lattice Energy 331
Periodic Trends in Lattice Energy 333
How the Model Explains the Properties of Ionic

9.3 The Covalent Bonding Model 337

The Formation of a Covalent Bond 337

The Properties of a Covalent Bond: Bond Energy and Bond Length 338

How the Model Explains the Properties of Covalent Compounds 341

Tools of the Laboratory INFRARED SPECTROSCOPY 343

Bond Polarity 344

Electronegativity 344

Polar Covalent Bonds and Bond Polarity 346
The Partial Ionic Character of Polar Covalent Bonds 347
The Continuum of Bonding Across a Period 348

9.5 An Introduction to Metallic Bonding 349 The Electron-Sea Model 349

How the Model Explains the Properties of Metals 350

Chapter Perspective 351
For Review and Reference 352 Problems 353

The Shapes of Molecules 357

10.1 Depicting Molecules and Ions with Lewis Structures 358

Using the Octet Rule to Write Lewis Structures 358 Resonance: Delocalized Electron-Pair Bonding 362 Formal Charge: Selecting the Best Resonance

Structure 364
Lewis Structures for Exceptions to the Octet Rule 365

10.2 Using Lewis Structures and Bond Energies to Calculate Heats of Reaction 368

10.3 Valence-Shell Electron-Pair Repulsion (VSEPR)

Theory and Molecular Shape 370 Electron-Group Arrangements and Molecular Shapes 371

The Molecular Shape with Two Electron Groups (Linear Arrangement) 372

Molecular Shapes with Three Electron Groups (Trigonal Planar Arrangement) 372

Molecular Shapes with Four Electron Groups (Tetrahedral Arrangement) 373

Molecular Shapes with Five Electron Groups (Trigonal Bipyramidal Arrangement) 375

Molecular Shapes with Six Electron Groups (Octahedral Arrangement) 376

Using VSEPR Theory to Determine Molecular Shape 377

Molecular Shapes with More Than One Central Atom 378

Deauty: ODD SHAPES WITH USEFUL FUNCTIONS 380

Molecular Shape and Molecular Polarity 381 Bond Polarity, Bond Angle, and Dipole Moment 381 The Effect of Molecular Polarity on Behavior 383

Chapter Perspective 383

Chemistry in Sensory
Physiology: MOLECULAR SHAPE, BIOLOGICAL
RECEPTORS, AND THE SENSE OF SMELL 384

For Review and Reference 386 Problems 387

Theories of Covalent Bonding 392

11.1 Valence Bond (VB) Theory and Orbital Hybridization 393

The Central Themes of VB Theory 393 Types of Hybrid Orbitals 394

11.2 The Mode of Orbital Overlap and the Types of Covalent Bonds 400 The VB Treatment of Single and Multiple Bonds 400

Orbital Overlap and Molecular Rotation 403

11.3 Molecular Orbital (MO) Theory and Electron

Delocalization 404
The Central Themes of MO Theory 404

Under Homonuclear Diatomic Molecules of the Period 2 Elements 407

MO Description of Some Heteronuclear Diatomic Molecules 412

MO Descriptions of Ozone and Benzene 413

Chapter Perspective 414
For Review and Reference 414 Problems 416

Intermolecular Forces: Liquids, Solids, and Phase Changes 419

12.1 An Overview of Physical States and Phase Changes 420

12.2 Quantitative Aspects of Phase Changes 423. Heat Involved in Phase Changes: A Kinetic-Molecular

Approach 423
The Equilibrium Nature of Phase Changes 425
Phase Diagrams: The Effect of Pressure and Temperature

12.3 Types of Intermolecular Forces 431

Ion-Dipole Forces 432 Dipole-Dipole Forces 432 The Hydrogen Bond 434

on Physical State 430

Polarizability and Charge-Induced Dipole Forces 436 Dispersion (London) Forces 436

12.4 Properties of the Liquid State 439

Surface Tension 439 Capillarity 439 Viscosity 440

ALES OF LIQUIDS 441

12.5 The Uniqueness of Water 442

Solvent Properties of Water 442
Thermal Properties of Water 442
Surface Properties of Water 443
The Density of Solid and Liquid Water 443

12.6 The Solid State: Structure, Properties, and Bonding 445

Structural Features of Solids 445

ANALYSIS AND SCANNING TUNNELING
MICROSCOPY 451

Types and Properties of Crystalline Solids 452

Amorphous Solids 456

Bonding in Solids: Molecular Orbital Band Theory 456

12.7 Advanced Materials 460

Electronic Materials 460 Liquid Crystals 462 Ceramic Materials 465 Polymeric Materials 468

Nanotechnology: Designing Materials Atom by Atom 473

Chapter Perspective 475

For Review and Reference 476 Problems 477

The Properties of Mixtures: Solutions and Colloids 484

13.1 Types of Solutions: Intermolecular Forces and Predicting Solubility 486

Intermolecular Forces in Solution 486 Liquid Solutions and the Role of Molecular Polarity 487

Chemistry in Pharmacology:

THE MODE OF ACTION OF SOAPS AND ANTIBIOTICS 490

Gas Solutions and Solid Solutions 492

13.2 Energy Changes in the Solution Process 493
Heats of Solution and Solution Cycles 493
Heats of Hydration: Ionic Solids in Water 494
The Solution Process and the Tendency Toward

Disorder 496

13.3 Solubility as an Equilibrium Process 497
Effect of Temperature on Solubility 498
Effect of Pressure on Solubility 500

13.4 Quantitative Ways of Expressing Concentration 501

Molarity and Molality 501
Parts of Solute by Parts of Solution 502
Converting Units of Concentration 504

13.5 Colligative Properties of Solutions 506
Colligative Properties of Nonvolatile Nonelectrolyte
Solutions 506

CATIVE PROPERTIES IN INDUSTRY

AND BIOLOGY 512

Using Colligative Properties to Find Solute Molar Mass 514

Colligative Properties of Volatile Nonelectrolyte Solutions 515

Colligative Properties of Electrolyte Solutions 516

13.6 The Structure and Properties of Colloids 517

Chapter Perspective 519

Engineering: SOLUTIONS AND COLLOIDS
IN WATER PURIFICATION 520

For Review and Reference 522 Problems 524

A Perspective on the Properties of the Elements 531

Topic 1 The Key Atomic Properties 532

Topic 2 Characteristics of Chemical Bonding 534

Topic 3 Metallic Behavior 536

Topic 4 Acid-Base Behavior of the Element Oxides 537

Topic 5 Redox Behavior of the Elements 538
Topic 6 Physical States and Phase Changes 540

Periodic Patterns in the. Main-Group Elements: Bonding, Structure, and Reactivity 542

- 14.1 Hydrogen, the Simplest Atom 543 Where Does Hydrogen Fit in the Periodic Table? 543 Highlights of Hydrogen Chemistry 544
- 14.2 Trends Across the Periodic Table: The Period 2
 Flements 545
- 14.3 Group 1A(1): The Alkali Metals 548
 Why Are the Alkali Metals Soft, Low Melting, and Lightweight? 548
 Why Are the Alkali Metals So Reactive? 548
 The Anomalous Behavior of Lithium 549
- 14.4 Group 2A(2): The Alkaline Earth Metals 552

 How Do the Physical Properties of the Alkaline Earth
 and Alkali Metals Compare? 552

 How Do the Chemical Properties of the Alkaline Earth
 and Alkali Metals Compare? 552

and Alkali Metals Compare? 552
The Anomalous Behavior of Beryllium 553
Diagonal Relationships: Lithium and Magnesium 553
Looking Backward and Forward: Groups 1A(1), 2A(2).

and 3A(13) 553

14.5 Group 3A(13): The Boron Family 556

How Do the Transition Elements Influence Group 3A(13)
Properties? 556

What New Features Appear in the Chemical Properties of Group 3A(13)? 556

Highlights of Boron Chemistry 560

Diagonal Relationships: Beryllium and Aluminum 562

14.6 Group 4A(14): The Carbon Family 562

How Does the Bonding in an Element Affect Physical Properties? 562

How Does the Type of Bonding Change in Group 4A(14) Compounds? 566

Highlights of Carbon Chemistry 566

Highlights of Silicon Chemistry 568

Diagonal Relationships: Boron and Silicon 569

Looking Backward and Forward: Groups 3A(13), 4A(14), and 5A(15) 569

MAINERALS AND SILICONE

POLYMERS 570

14.7 Group 5A(15): The Nitrogen Family 573

What Accounts for the Wide Range of Physical Behavior in Group 5A(15)? 573

What Patterns Appear in the Chemical Behavior of Group 5A(15)? 576

Highlights of Nitrogen Chemistry 577

Highlights of Phosphorus Chemistry: Oxides and Oxoacids 580

Group 6A(16): The Oxygen Family 581

How Do the Oxygen and Nitrogen Families Compare Physically? 581

How Do the Oxygen and Nitrogen Families Compare Chemically? 584

Highlights of Oxygen Chemistry: Range of Oxide Properties 586

Highlights of Sulfur Chemistry: Oxides, Oxoacids, and Sulfides 586

Looking Backward and Forward: Groups 5A(15), 6A(16), and 7A(17) 588

Group 7A(17): The Halogens 588

What Accounts for the Regular Changes in the Halogens' Physical Properties? 588

Why Are the Halogens So Reactive? 588 Highlights of Halogen Chemistry 592

4.10 Group 8A(18): The Noble Gases 595

How Can Noble Gases Form Compounds? 595 Looking Backward and Forward: Groups 7A(17), 8A(18), and 1A(1) 595

Chapter Perspective 597 For Review and Reference 597 Problems 598

Organic Compounds and the **Atomic Properties of Carbon 606**

15.1 The Special Nature of Carbon and the Characteristics of Organic Molecules 607

The Structural Complexity of Organic Molecules 608 The Chemical Diversity of Organic Molecules 608

15.2 The Structures and Classes

of Hydrocarbons 610

Carbon Skeletons and Hydrogen Skins 610 Alkanes: Hydrocarbons with Only Single Bonds 613 Constitutional Isomerism and the Physical Properties of Alkanes 615

Chiral Molecules and Optical Isomerism 617 Alkenes: Hydrocarbons with Double Bonds 618

Chemistry in Sensory

Physiology: GEOMETRIC ISOMERS AND THE

CHEMISTRY OF VISION 620

Alkynes: Hydrocarbons with Triple Bonds 621 Aromatic Hydrocarbons: Cyclic Molecules with

Delocalized π Electrons 622

Variations on a Theme: Catenated Inorganic Hydrides 623

Tools of the Laboratory NUCLEAR MAGNETIC **RESONANCE (NMR) SPECTROSCOPY 624**

15.3 Some Important Classes of Organic Reactions 624

Types of Organic Reactions 624

The Redox Process in Organic Reactions 627

15.4 Properties and Reactivities of Common

Functional Groups 627

Functional Groups with Single Bonds 628 Functional Groups with Double Bonds 633 Functional Groups with Both Single and Double Bonds 635

Functional Groups with Triple Bonds 640

15.5 The Monomer-Polymer Theme I: Synthetic Macromolecules 641

Addition Polymers 642 Condensation Polymers 643

15.6 The Monomer-Polymer Theme II: Biological Macromolecules 644

Sugars and Polysaccharides 644 Amino Acids and Proteins 646 Nucleotides and Nucleic Acids 650

Chapter Perspective 654 For Review and Reference 654 Problems 656

Kinetics: Rates and Mechanisms of Chemical Reactions 663

16.1 Factors That Influence Reaction Rate 665

16.2 Expressing the Reaction Rate 667

Average, Instantaneous, and Initial Reaction Rates 668 Expressing Rate in Terms of Reactant and Product Concentrations 669

16.3 The Rate Law and Its Components 671

Tools of the Laboratory MEASURING REACTION RATES 672

Determining the Initial Rate 672 Reaction Order Terminology 672 **Determining Reaction Orders 675** Determining the Rate Constant 677

16.4 Integrated Rate Laws: Concentration Changes over Time 677

Integrated Rate Laws for First-, Second-, and Zero-Order Reactions 677

Determining the Reaction Order from the Integrated Rate Law 679

Reaction Half-Life 680

16.5 The Effect of Temperature on Reaction Rate 682

16.6 Explaining the Effects of Concentration and Temperature 685

Collision Theory: Basis of the Rate Law 685
Transition State Theory: Molecular Nature of the
Activated State 688

16.7 Reaction Mechanisms: Steps in the Overall Reaction 691

Elementary Reactions and Molecularity 692
The Pate Determining Step of a Reaction

The Rate-Determining Step of a Reaction Mechanism 693

Correlating the Mechanism with the Rate Law 694

16.8 Catalysis: Speeding Up a Chemical Reaction 697

Homogeneous Catalysis 698 Heterogeneous Catalysis 699

Chemistry in Enzymology: KINETICS AND FUNCTION OF BIOLOGICAL CATALYSTS 700

Science: DEPLETION OF THE EARTH'S OZONE LAYER 702

Chapter Perspective 703 For Review and Reference 703 Problems 705

Equilibrium: The Extent of Chemical Reactions 713

- 17.1 The Dynamic Nature of the Equilibrium State 714
- 17.2 The Reaction Quotient and the Equilibrium Constant 717
 Writing the Reaction Quotient 718

Variations in the Form of the Reaction Quotient 719

- 17.3 Expressing Equilibria with Pressure Terms: Relation Between K_c and K_p 724
- 17.4 Reaction Direction: Comparing Q and K 725
- 17.5 How to Solve Equilibrium Problems 727
 Using Quantities to Determine the Equilibrium
 Constant 727
 Using the Equilibrium Constant to Determine

Quantities 730

17.6 Reaction Conditions and the Equilibrium States
Le Châtelier's Principle 736

The Effect of a Change in Concentration 737
The Effect of a Change in Pressure (Volume) 739
The Effect of a Change in Temperature 741
The Lack of Effect of a Catalyst 743

Chemistry in Industrial
Production: THE HABER PROCESS FOR THE
SYNTHESIS OF AMMONIA 744

Metabolism: DESIGN AND CONTROL OF A METABOLIC PATHWAY 745

Chapter Perspective 747
For Review and Reference 747 Problems 749

Acid-Base Equilibria 756

18.1 Acids and Bases in Water 758

Proton or Hydroxide Ion Release and the Classical Acid-Base Definition 759

Variation in Acid Strength: The Acid-Dissociation Constant (K_a) 759

Classifying the Relative Strengths of Acids and Bases 762

18.2 Autoionization of Water and the pH Scale 764
The Equilibrium Nature of Autoionization: The IonProduct Constant for Water (K_w) 764

Expressing the Hydronium Ion Concentration: The pH Scale 765

18.3 Proton Transfer and the Brønsted-Lowry Acid-Base Definition 768

The Conjugate Acid-Base Pair 769
Relative Acid-Base Strength and the Net Direction
of Reaction 770

18.4 Solving Problems Involving Weak-Acid Equilibria 772

Finding K_a Given Concentrations 773
Finding Concentrations Given K_a 775
The Effect of Concentration on the Extent of Acid
Dissociation 776

The Behavior of Polyprotic Acids 776

18.5 Weak Bases and Their Relation to Weak Acids 779

Molecules as Weak Bases: Ammonia and the Amines 773

Anions of Weak Acids as Weak Bases 782

The Relation Between K_a and K_b of a Conjugate

Acid-Base Pair 782

18.6 Molecular Properties and Acid Strength 784

Trends in Acid Strength of Nonmetal Hydrides 784

Trends in Acid Strength of Oxoacids 785

Acidity of Hydrated Metal Ions 786

- 18.7 Acid-Base Properties of Salt Solutions 787 Salts That Yield Neutral Solutions 787 Salts That Yield Acidic Solutions 787 Salts That Yield Basic Solutions 788 Salts of Weakly Acidic Cations and Weakly Basic
- 18.8 Generalizing the Brønsted-Lowry Concept: The Leveling Effect 790
- 18.9 Electron-Pair Donation and the Lewis Acid-Base Definition 791

Molecules as Lewis Acids 792 Metal Cations as Lewis Acids 793

An Overview of Acid-Base Definitions 794

Chapter Perspective 795 For Review and Reference 795 Problems 797

- 19.1 Equilibria of Acid-Base Buffer Systems 806 How a Buffer Works: The Common-Ion Effect 806
 - The Henderson-Hasselbalch Equation 811
 - Buffer Capacity and Buffer Range 812 Preparing a Buffer 813
- **Acid-Base Titration Curves 815**
 - Monitoring pH with Acid-Base Indicators 815 Strong Acid-Strong Base Titration Curves 816 Weak Acid-Strong Base Titration Curves 818
 - Weak Base-Strong Acid Titration Curves 821 Titration Curves for Polyprotic Acids 822
- Amino Acids as Biological Polyprotic Acids 823 **Equilibria of Slightly Soluble Ionic**
 - Compounds 824 The Ion-Product Expression (Q_{sp}) and the Solubility-Product Constant (K_{sp}) 824

Calculations Involving the Solubility-Product Constant 826

The Effect of a Common Ion on Solubility 828 The Effect of pH on Solubility 829 Predicting the Formation of a Precipitate: $Q_{\rm sp}$ vs. $K_{\rm sp}$ 830

Chemistry in Geology:

CREATION OF A LIMESTONE CAVE 831

Chemistry in Environmental

Science: THE ACID-RAIN PROBLEM 833

- 19.4 Equilibria Involving Complex Ions 835 Formation of Complex Ions 835 Complex Ions and the Solubility of Precipitates 837 Complex Ions of Amphoteric Hydroxides 838
- 19.5 Application of Ionic Equilibria to Chemical Analysis 840

Selective Precipitation 840 Qualitative Analysis: Identifying Ions in Complex

Mixtures 841 Chapter Perspective 846

For Review and Reference 846 Problems 848

Thermodynamics: Entropy, Free Energy, and the Direction of Chemical Reactions 855

- 20.1 The Second Law of Thermodynamics: Predicting Spontaneous Change 856 Limitations of the First Law of Thermodynamics 857 The Sign of ΔH Cannot Predict Spontaneous Change 858 Disorder and Entropy 859
 - Entropy and the Second Law of Thermodynamics 861 Standard Molar Entropies and the Third Law 861
- 20.2 Calculating the Change in Entropy of a Reaction 866 Entropy Changes in the System: The Standard Entropy of Reaction (ΔS_{rxn}^{o}) 866
 - Entropy Changes in the Surroundings: The Other Part of the Total 867
 - Chemistry in Biology: DO LIVING THINGS OBEY THE LAWS OF THERMODYNAMICS? 869

The Entropy Change and the Equilibrium State 870 Spontaneous Exothermic and Endothermic Reactions: A Summary 870

- 20.3 Entropy, Free Energy, and Work 872 Free Energy Change and Reaction Spontaneity 872 Calculating Standard Free Energy Changes 873 ΔG and the Work a System Can Do 874
 - Coupling of Reactions to Drive a Nonspontaneous Change 878 Chemistry in Biological

The Effect of Temperature on Reaction Spontaneity 876

- Energetics: THE UNIVERSAL ROLE OF ATP 879
- 20.4 Free Energy, Equilibrium, and Reaction Direction 880

Chapter Perspective 884 For Review and Reference 884 Problems 886

21.1 Half-Reactions and Electrochemical Cells 893 A Quick Review of Oxidation-Reduction Concepts 893

> Half-Reaction Method for Balancing Redox Reactions 894 An Overview of Electrochemical Cells 898

21.2 Voltaic Cells: Using Spontaneous Reactions to Generate Electrical Energy 900

Construction and Operation of a Voltaic Cell 900 Notation for a Voltaic Cell 903 Why Does a Voltaic Cell Work? 904

21.3 Cell Potential: Output of a Voltaic Cell 905
Standard Cell Potentials 906
Relative Strengths of Oxidizing and Reducing
Agents 908

21.4 Free Energy and Electrical Work 914

Standard Cell Potential and the Equilibrium Constant 914
The Effect of Concentration on Cell Potential 916
Cell Potential and the Relation Between Q and K 918
Concentration Cells 919

21.5 Electrochemical Processes in Batteries 922

MES AND THEIR APPLICATIONS 923

21.6 Corrosion: A Case of Environmental Electrochemistry 926
The Corrosion of Iron 926

Protecting Against the Corrosion of Iron 927

21.7 Electrolytic Cells: Using Electrical Energy to Drive a Nonspontaneous Reaction 929

Construction and Operation of an Electrolytic Cell 929 Predicting the Products of Electrolysis 931 The Stoichiometry of Electrolysis: The Relation Between

Amounts of Charge and Product 935

Energetics: CELLULAR ELECTROCHEMISTRY AND THE PRODUCTION OF ATP 937

Chapter Perspective 939
For Review and Reference 939 Problems 942

The Elements in Nature and Industry 950

22.1 How the Elements Occur in Nature 951
Earth's Structure and the Abundance of the Elements 951
Sources of the Elements 955

22.2 The Cycling of Elements Through the Environment 956

The Carbon Cycle 956
The Nitrogen Cycle 958
The Phosphorus Cycle 960

22.3 Metallurgy: Extracting a Metal from Its Ore 963

Pretreating the Ore 963 Converting Mineral to Element 964 Refining and Alloying the Element 967

22.4 Tapping the Crust: Isolation and Uses of the Elements 968

Producing the Alkali Metals: Sodium and Potassium 968
The Indispensable Three: Iron, Copper, and
Aluminum 970

Mining the Sea: Magnesium and Bromine 977
The Many Sources and Uses of Hydrogen 978
A Group at a Glance: Sources, Isolation, and Uses of the Elements 981

22.5 Chemical Manufacturing: Two Case Studies 987

Sulfuric Acid, the Most Important Chemical 987 The Chlor-Alkali Process 990

Chapter Perspective 991

For Review and Reference 992 Problems 993

The Transition Elements and Their Coordination Compounds 998

23.1 Properties of the Transition Elements 1000
Electron Configurations of the Transition Metals and

Their Ions 1000

Atomic and Physical Properties of the Transition Elements 1002

Chemical Properties of the Transition Metals 1003

23.2 The Inner Transition Elements 1006
The Lanthanides 1006
The Actinides 1007

23.3 Highlights of Selected Transition Metals 1008
Chromium 1008
Manganese 1009
Silver 1010

Mercury 1012

23.4 Coordination Compounds 1013

Structures of Complex Ions: Coordination Numbers,
Geometries, and Ligands 1014
Formulas and Names of Coordination Compounds 1016

A Historical Perspective: Alfred Werner and Coordination
Theory 1018

Isomerism in Coordination Compounds 1020

23.5 Theoretical Basis for the Bonding and Properties of Complexes 1023

Application of Valence Bond Theory to Complex Ions 1023 Crystal Field Theory 1025

Chapter Perspective 1031

Science: TRANSITION METALS AS ESSENTIAL DIETARY TRACE ELEMENTS 1032

For Review and Reference 1034 Problems 1035

Nuclear Reactions and Their Applications 1040

24.1 Radioactive Decay and Nuclear Stability 1042

The Components of the Nucleus: Terms and Notation 1042

The Discovery of Radioactivity and the Types of Emissions 1042 Types of Radioactive Decay; Balancing Nuclear

Equations 1044

Nuclear Stability and the Mode of Decay 1046

Tools of the Laboratory COUNTERS FOR THE **DETECTION OF RADIOACTIVE** EMISSIONS 1051 Radioisotopic Dating 1053

Nuclear Transmutation: Induced Changes Nuclei 1055

> arly Transmutation Experiments; Discovery of the Neutron 1055

Particle Accelerators and the Transuranium Elements 1056

24.4 The Effects of Nuclear Radiation on Matter 1058

> The Effects of Radioactive Emissions: Excitation and Ionization 1058 Effects of Ionizing Radiation on Living Matter 1058

Applications of Radioisotopes 1062

Radioactive Tracers: Applications of Nonionizing Radiation 1062

Applications of Ionizing Radiation 1065

The Interconversion of Mass and Energy 1066 The Mass Defect 1066

Nuclear Binding Energy 1067

24.7 Applications of Fission and Fusion 1069

The Process of Nuclear Fission 1069 The Promise of Nuclear Fusion 1073

Chemistry in Cosmology:

ORIGIN OF THE ELEMENTS IN THE STARS 1074

Chapter Perspective 1076

For Review and Reference 1077 Problems 1079

Appendix A Common Mathematical Operations in Chemistry A-1

Manipulating Logarithms A-1

Using Exponential (Scientific) Notation A-2

Solving Quadratic Equations A-3

Graphing Data in the Form of a Straight Line A-4

Appendix B Standard Thermodynamic Values for Selected Substances at 298 K A-5

Appendix C Solubility-Product Constants (K_{sp}) of Slightly Soluble Ionic Compounds at 298 K A-8

Appendix D Standard Electrode (Half-Cell) Potentials at 298 K A-9

Appendix E Answers to Selected Problems A-10

Glossary G-1 Credits C-1 Index I-1

SUMMARY LIST OF SPECIAL FEATURES

Chemistry Problem Solving in the Real World 32

Chemistry in Planetary Science: Structure and Composition of the Earth's Atmosphere 204

hemistry in Environmental Science: The Future of Energy Use 243

hemistry in Sensory Physiology: Molecular Shape, Biological Receptors, and the Sense of Smell 384

demistry in Pharmacology: The Mode of Action of Soaps and Antibiotics 490

mistry in Sanitary Engineering: Solutions and Colloids in Water Purification 520

Chemistry in Sensory Physiology: Geometric Isomers and the Chemistry of Vision 620

anstry in Enzymology: Kinetics and Function of Biological Catalysts 700

Chemistry in Atmospheric Science: Depletion of the Earth's Ozone Layer 702

Cheraistry in Industrial Production: The Haber Process for the Synthesis of Ammonia 744

Chemistry in Cellular Metabolism: Design and Control of a Metabolic Pathway 745

Chemistry in Geology: Creation of a Limestone Cave 831 Themistry in Environmental Science: The Acid-Rain

Problem 833

Themistry in Biology: Do Living Things Obey the Laws of Thermodynamics? 869

Chemistry in Biological Energetics: The Universal Role of ATP 879

Chemistry in Biological Energetics: Cellular Electrochemistry and the Production of ATP 937

Chemistry in Nutritional Science: Transition Metals as Essential Dietary Trace Elements 1032

Chemistry in Cosmology: Origins of the Elements in the Stars 1074

Tools of the Laboratory

Mass Spectrometry 54

Basic Separation Techniques 75

Spectrophotometry in Chemical Analysis 267

Infrared Spectroscopy 343

X-Ray Diffraction Analysis and Scanning Tunneling Microscopy 451

Nuclear Magnetic Resonance (NMR) Spectroscopy 624 Measuring Reaction Rates 672

Counters for the Detection of Radioactive Emissions 1051

Picturing Molecules 73

Molecular Beauty: Odd Shapes with Useful Functions 380

Properties of Liquids 441

Colligative Properties in Industry and Biology 512 Silicate Minerals and Silicone Polymers 570

Batteries and Their Applications 923
