

WILEY SERIES IN POLYMER SCIENCE

POLYMER-CLAY NANOCOMPOSITES

Edited by **T. J. Pinnavaia**
and **G. W. Beall**

Contents

Contributors	xiii
Series Preface	xvii
Preface	xix

I POLYMER-CLAY INTERCALATES

1 Layered Silicate-Polymer Intercalation Compounds.	3
<i>Y. Komori and K. Kuroda</i>	
1 Introduction	3
2 Variation in Host Materials for Polymer Intercalation	6
2.1 Layered Polysilicate	6
2.1.1 Various reaction routes in layered polysilicates	6
2.1.2 Layered polysilicate-polymer systems	7
2.2 Kaolinite	8
2.2.1 Intercalation of kaolinite—effective use of guest displacement	8
2.2.2 Kaolinite-polymer systems	9
2.3 Layered Double Hydroxide	10
2.3.1 Intercalation property of layered double hydroxide	10
2.3.2 LDH-polymer systems	11
3 Some Examples of the Role of Polymers in Interlayers	12
3.1 Modification of Interlayer Environment	12
3.2 Carbothermal Reduction	12
3.3 Ordered Graphite	14
3.4 Control of Transformation of Silicate Layers	15
4 Conclusions	16
5 References	16

2	Electroactive Polymers Intercalated in Clays and Related Solids	19
	<i>E. Ruiz-Hitzky and P. Aranda</i>	
1	Introduction	19
2	Conducting Polymers.	21
2.1	Ion-Conducting Polymers	21
2.2	Electronically Conducting Polymers	22
3	Polymer Electrolyte-Clay Nanocomposites	23
4	Electronically Conducting Polymer Intercalation in Clays	30
5	Conducting Polymer Nanocomposites Based on Clay-Related Solids	34
5.1	Inorganic Layered Solids	34
5.2	Silica and Zeolites	37
6	Conclusions	40
7	References	41
3	Polymer-Clay Nanocomposites Derived from Polymer-Silicate Gels	47
	<i>K. A. Carrado, L. Xu, S. Seifert, R. Csencsits and C. A. A. Bloomquist</i>	
1	Introduction	47
2	Experimental	49
2.1	Clay Synthesis	49
2.2	Characterization	50
3	Results	55
4	Discussion	59
5	Conclusions	61
6	Acknowledgements	62
7	References and Notes	62
4	Polymerization of Organic Monomers and Biomolecules on Hectorite	65
	<i>M. P. Eastman and T. L. Porter</i>	
1	Introduction	65
2	Important Properties of the Clay Matrix	66
3	Scanning Force Microscopy and Clay Films	67
4	Redox Reactions and Polymerization of Organic Compounds . .	70
5	Acid-Initiated Polymerization	80
6	Reactions of Amino Acids and Activated Nucleotides with Hectorite	86
7	Conclusions	91
8	References	92

II NANOCOMPOSITE SYNTHESIS AND PROPERTIES

5	Polymer–Clay Nanocomposites	97
	<i>M. Kato and A. Usuki</i>	
1	Introduction	97
2	Synthesis Methods	98
2.1	Monomer Intercalation Method	98
2.2	Monomer Modification Method	102
2.3	Covulcanization Method	103
2.4	Common Solvent Method	104
2.5	Polymer Melt Intercalation Method	105
3	Conclusions	109
4	References	109
6	<i>In Situ</i> Polymerization Route to Nylon 6–Clay Nanocomposites 111	
	<i>K. Yasue, S. Katahira, M. Yoshikawa and K. Fujimoto</i>	
1	Introduction	111
2	Swellable Clay Minerals	112
3	Nylon 6–Clay Nanocomposites	112
4	<i>In Situ</i> Polymerization Methods	114
5	Properties of the Nylon 6–Clay Nanocomposite	119
5.1	Crystallization of the Nanocomposite	119
5.2	Rheological Properties	119
5.3	Effect of Silicate Sheets as a Reinforcing Filler	120
5.4	Typical Properties of the Nanocomposite	120
5.4.1	Flexural modulus	120
5.4.2	Tensile elongation	121
5.4.3	Distortion temperature under load	123
5.4.4	Barrier property	123
5.4.5	Recycle property	123
6	Application of the Nanocomposite	124
6.1	Injection Molded Articles	124
6.2	Films	124
6.3	Fibers	124
7	Conclusion	125
8	References	125
7	Epoxy–Clay Nanocomposites	127
	<i>Z. Wang, J. Massam and T. J. Pinnavaia</i>	
1	Introduction	127
1.1	Nanocomposite Concept	127

1.2	Smectite and Layered Silicate Clays for Nanocomposite Formation	128
1.3	Types of Polymer–Clay Nanocomposite.	129
2	Nanocomposite Synthesis and Characterization	131
2.1	Epoxy–Smectite Clay Nanocomposites	131
2.2	Epoxy Nanocomposite Derived from Organocation Intercalates of Layered Silicic Acid	136
3	Nanocomposite Properties	137
3.1	Tensile Properties	137
3.2	Compressive Properties	140
3.3	Dynamic Mechanical Analysis Measurements	141
3.4	Dimensional Stability.	143
3.5	Chemical Stability and Solvent Resistance.	144
3.6	Thermal Stability.	145
3.7	Optical Transparency	146
4	Conclusions.	147
5	Acknowledgements	148
6	References.	148
8	Polypropylene–Clay Nanocomposites	151
	<i>A. Oya</i>	
1	Introduction	151
2	Method Using Mechanical Shear.	152
2.1	Preparation Procedure	152
2.2	Structure of Composite	
3	Method Using Solvent.	154
3.1	Preparation Procedure	155
3.2	Structure and Properties of the Composite.	157
3.2.1	Methyltrimethoxysilane treatment.	157
3.2.2	Separation of the stacked layer structure in a solvent	157
3.2.3	Structure of the composite	159
3.2.4	Mechanical properties of the composite.	160
4	Newly Developed Methods.	161
4.1	Preparation Procedures.	162
4.2	Composite Structure and Properties	163
4.2.1	Structures of pristine clays	163
4.2.2	Structures of nanocomposites	165
4.2.3	Behavior of diacetone acrylamide.	166
4.2.4	Properties of nanocomposites	167
5	Acknowledgements	171
6	References.	172

9 Polyethylene Terephthalate–Clay Nanocomposites	173
<i>T.-Y. Tsai</i>	
1 Introduction	173
2 Development Review and Patent Analysis of PET/Clay Nanocomposites	174
2.1 Ion Exchange Methods	178
2.2 Synthetic Clay Methods	179
2.3 Diffusion Methods	179
3 Characterization and Modification of the Clays	182
3.1 High-Purity Clays	183
3.2 Modification of the Pure Clays	183
4 Conclusion	188
5 Acknowledgments	188
6 References	188

III SPECIAL PROPERTIES AND APPLICATIONS

10 Polymer–Layered Silicate Nanocomposites with Conventional Flame Retardants	193
<i>J. W. Gilman and T. Kashiwagi</i>	
1 Introduction	193
1.1 Nanocomposites	193
1.2 Thermal Stability and Flammability Properties	195
2 Nanocomposite Flame Retardant Mechanism	196
3 Nanocomposites and Conventional Flame Retardants	198
3.1 Nanocomposites and Intumescent Flame Retardant	199
3.2 Nanocomposites with Brominated Polycarbonate/Sb ₂ O ₃ and Polytetrafluoroethylene	200
3.3 Polyethylene–Layered Silicate Nanocomposites and Conventional Flame Retardant	200
3.4 Nanocomposites and Melamine	203
4 Summary	204
5 Acknowledgments	204
6 References and Notes	205
11 Nanocomposite Technology for Enhancing the Gas Barrier of Polyethylene Terephthalate	207
<i>J. C. Matayabas Jr and S. R. Turner</i>	
1 Introduction	207
2 Barrier Enhancement from Platelet Materials	208
2.1 Theory	208

2.2	Exfoliated Nanocomposites	208
3	Preparation and Properties of PET Nanocomposites	211
3.1	<i>In situ</i> Incorporation of Clay into PET	212
3.2	Melt Compounding Approaches to PET Nanocomposites	215
3.3	Expanded Organoclays	216
3.4	Mechanism for <i>In situ</i> Exfoliation in PET	218
4	Multilayer Nanocomposite Containers	222
4.1	PET Nanocomposites	222
4.2	High-Barrier Nylon Nanocomposites	223
5	Nanocomposite Coatings	224
6	Summary	224
7	Acknowledgements	225
8	References	225

IV STRUCTURE AND RHEOLOGY

12	Structural Characterization of Polymer-Layered Silicate Nanocomposites	229
	<i>R. A. Vaia</i>	
1	Introduction	229
2	Background	230
2.1	Layered Silicates	231
2.2	Polymer-Layered Silicate Fabrication	233
3	Nanoscale Morphologies	235
3.1	Models	236
3.2	Transmission Electron Microscopy	238
3.3	General Classification	242
4	Powder Diffraction	245
4.1	Experimental Factors	246
4.2	Density Projection: Electron (X-Ray) and Nucleus (Neutron)	249
5	Small-Angle Scattering: Neutron and X-Ray	251
5.1	Dispersion of Layered Silicates	252
5.2	Polymer Structure in PLSNs	256
6	Conclusion	261
7	Acknowledgements	263
8	References	263
13	New Conceptual Model for Interpreting Nanocomposite Behavior	267
	<i>G. W. Beall</i>	
1	Introduction	267
2	Barrier Model	268

3	Conceptual Model.	270
4	Conclusion	276
5	References.	278
14	Modeling the Phase Behavior of Polymer-Clay Nanocomposites	281
	<i>A. Balazs, V. V. Ginzburg, Y. Lytetskaya, C. Singh and E. Zhulina</i>	
1	Introduction	281
2	Polymers Penetrating the Closely Spaced Sheets	285
2.1	Self-Consistent Field Calculations	285
2.1.1	Tailoring the surfactants	285
2.1.2	Tailoring the polymer melt	290
2.1.3	Tailoring the clay substrate	291
3	Modeling the Macroscopic Phase Behavior	294
3.1	Onsager-Type Approach: Orientational Ordering of Clay Sheets	294
3.1.1	Isotropic-nematic phase diagrams: the role of shape anisotropy and polymer chain length	295
3.2	Combining Density Functional and Self-Consistent Field Theory	297
3.2.1	SCF input data	303
3.2.2	Phase diagrams: the role of ρ_{gr} and N_{gr}	305
3.3	Combining Thermodynamics with Kinetics	309
4	Conclusions	310
5	Acknowledgements	311
6	References and Notes	311
15	Rheological Properties of Polymer-Layered Silicate Nanocomposites	315
	<i>R. Krishnamoorti and A. S. Silva</i>	
1	Introduction	315
2	Linear Viscoelastic Properties	316
2.1	End-Tethered Exfoliated Nanocomposites	317
2.2	Intercalated PSPI Nanocomposites	322
2.3	Structural Origins of Linear Viscoelasticity	327
3	Non-linear Viscoelastic Properties	331
3.1	Alignment by Large-Amplitude Oscillatory Shear	331
3.2	Non-linear Dynamic Moduli	333
3.3	Steady Shear Response.	338
4	Summary.	340
5	Acknowledgements	341
6	References and Notes	341
	Index	345
