

PARASITIC NEMATODES

MOLECULAR BIOLOGY,
BIOCHEMISTRY AND
IMMUNOLOGY

Edited by
M.W. Kennedy and W. Harnett

CABI Publishing

Contents

Contributors	xvii
Preface	xxi
Access to Colour Illustrations	xxiii
Part I Genetics and Phylogeny	
1 Molecular Analysis of Nematode Evolution	1
<i>Mark L. Blaxter</i>	
Introduction	1
The Molecular Revolution	2
Molecular Markers	3
The Structure of the Nematoda and the Origins of Parasitism	4
Strongylid Evolution Revealed by Three Different Genes	9
Resolution of Species Complexes by Molecular Phylogenetics	11
The Evolution of Parasitic Phenotypes	13
Concluding Remarks	18
References	18
2 The <i>Wolbachia</i> Endosymbionts of Filarial Nematodes	25
<i>Claudio Bandi, Timothy J.C. Anderson, Claudio Genchi and Mark L. Blaxter</i>	

Introduction	25
The Discovery and Rediscovery of Intracellular Symbiosis in Filarial Nematodes	25
Background Information on Bacterial Symbiosis in Invertebrates	26
Phylogenetic positionings of <i>Wolbachia</i> and other intracellular bacteria	26
<i>Wolbachia</i> , vertical transmission, mutualistic symbiosis and reproductive parasitism	27
Distribution of <i>Wolbachia</i> in arthropods	28
Distribution of <i>Wolbachia</i> in Filarial Worms	28
Phylogeny of <i>Wolbachia</i> in Filarial Worms	31
Interphylum transmission	32
Is <i>Wolbachia</i> monophyletic?	32
Horizontal transmission of <i>Wolbachia</i> between nematodes	32
Should Nematode <i>Wolbachia</i> Behave Differently from Arthropod <i>Wolbachia</i> ?	33
The <i>Wolbachia</i> –Filaria Relationship: an Obligate Mutualism?	33
The <i>Wolbachia</i> Catalase	35
Genomics and Proteomics	35
Implications for the Pathogenesis of Filarial Diseases	36
Implications for Treatment	37
Concluding Remarks	38
References	38
3 Forward Genetic Analysis of Plant-parasitic Nematode–Host Interactions	45
<i>Charles H. Opperman</i>	
Introduction	45
Soybean Cyst Nematode Biology	46
Genetic Analysis of Parasitism	47
Concluding Remarks	50
References	50
4 Identification of Parasitic Nematodes and Study of Genetic Variability Using PCR Approaches	53
<i>Robin B. Gasser</i>	
Introduction	53
Technical Aspects and Choice of the DNA Target for PCR	54
Template preparation	54
PCR: precautions, optimization and errors	55
Target region	56
Approaches to the Identification of Nematode Species and Strains	58
Amplification from specific DNA regions	58

PCR-linked restriction fragment length polymorphism (PCR-RFLP) analysis	59
Arbitrarily primed PCR	60
Analysis of mini- and microsatellites, and other repetitive elements	61
DNA sequencing approaches	62
Analysis of Genetic Variability by PCR-coupled Mutation	
Detection Methods	63
Denaturing gradient gel electrophoresis (DGGE)	64
Single-strand conformation polymorphism (SSCP) analysis	65
SSCP protocol	67
Concluding Remarks	70
Acknowledgements	71
References	71
5 Diversity in Populations of Parasitic Nematodes and its Significance	83
<i>Mark E. Viney</i>	
Introduction	83
A Developmental Choice for <i>Strongyloides ratti</i>	83
Diversity in Developmental Route	85
Artificial Selection for Developmental Route	86
The Environment and Developmental Route	87
Phenotypic Plasticity in Response to Temperature	87
The Molecular Basis of Variation in Sensitivity	89
Developmental Route and Host Immunity	90
Interaction of Host Immunity and Temperature on Developmental Route	91
Phenotypic Diversity and Arrested Development	93
Phenotypic Diversity and Immunology	94
Summary So Far	96
Parasite Modulation of Host Immune Responses	97
Consequences of Laboratory Maintenance	98
Concluding Remarks	99
References	100
Part II Host Modulation and Manipulation – Making Themselves at Home	
6 New Insights into the Intestinal Niche of <i>Trichinella spiralis</i> <i>Judith A. Appleton</i>	103
Introduction	103
Excretory/Secretory and Surface Glycoproteins of <i>T. spiralis</i> L1 Larvae	104

	Tyvelose and <i>Trichinella</i> Glycoprotein Function	104
	Function of ES Products	105
	Protective Activity of Anti-Tyvelose IgG	106
	Mucus Trapping and Expulsion	107
	Invasion of Epithelia <i>in vitro</i>	108
	Tyvelose and Invasion	112
	Cell Wounding and Pore Formation	113
	Interference with the Epithelial Niche of <i>T. spiralis</i> by Anti-Tyvelose IgG <i>in vitro</i>	114
	Concluding Remarks	116
	Acknowledgements	116
	References	116
7	Genetic Reprogramming of Mammalian Skeletal Muscle Cells by <i>Trichinella spiralis</i> <i>Douglas P. Jasmer</i>	121
	Introduction	121
	Genetic Reprogramming of the Host Muscle Cell	123
	Repositioning of the Host Cell in the Cell Cycle	123
	Repression of the Differentiated Skeletal Muscle Phenotype	125
	Acquisition of the Infected Cell Phenotype	126
	Parasite Regulation of the Infected Cell Phenotype	128
	General Consideration of Parasite Products	129
	Nuclear Antigens	130
	Other Possible <i>T. spiralis</i> Regulators of Host Muscle Cells	131
	Concluding Remarks	132
	References	133
8	Plant-parasitic Nematodes <i>David McK. Bird and Alan F. Bird</i>	139
	Introduction	139
	Root-knot and Cyst Nematodes	140
	The Impact of Plant-parasitic Nematodes	140
	Nematode Adaptations for Plant Parasitism	142
	Mouthparts	142
	Pharynx and Pharyngeal Glands	143
	Rectal Glands	145
	Developmental Changes	145
	Niches Occupied by Plant-parasitic Nematodes	147
	An Aerial Plant Parasite	149
	Root Parasites	149
	Feeding Sites of Sedentary Endoparasites	150
	Feeding Site Induction	151
	Induction of Giant Cells	151

Genes Expressed in Feeding Cells	153
Cell Cycle Regulation	154
Evolution of Parasitism: an Ancient Symbiosis?	155
Acquisition of Parasitism Genes by Horizontal Gene Transfer	156
Clade IV Nematode–Bacterial Associations	156
Concluding Remarks	159
References	159

Part III Specialist Products and Activities

9	The Nematode Cuticle: Synthesis, Modification and Mutants	167
	<i>Antony P. Page</i>	
	Nematode Cuticle: Structure	167
	Moultling	168
	Control of moultling	169
	The Cuticle Collagens	170
	Collagen Gene Expression	172
	<i>C. elegans</i> Cuticle Collagen-related Mutants	173
	Collagen Folding	174
	Catalysts of Collagen Folding, Co- and Post-translational Modification	175
	Peptidyl-prolyl <i>cis</i> – <i>trans</i> isomerase (PPI, cyclophilins/FKBPs) (EC 5.3.4.1)	177
	Prolyl 4-hydroxylase (PHY) (EC 1.14.11.2)	179
	Protein disulphide isomerase (PDI) (EC 5.2.1.8)	181
	Lysyl hydroxylase (LHY) (EC 1.14.11.4)	182
	Non-collagenous Cuticle Structural Components: the Cuticulins	183
	Cuticle Collagen/Cuticulin Cross-linking Enzymes	184
	Tyrosinase (EC 1.14.18.1) and phenol oxidase (EC 1.10.3.1)	184
	Transglutaminases (TGA) (EC 2.3.2.13)	184
	Concluding Remarks	185
	Acknowledgements	185
	References	186
10	Chitinases of Filarial Nematodes	195
	<i>Ralf Adam, Birgit Drabner and Richard Lucius</i>	
	Introduction	195
	The Role of Filarial Chitinases in Microfilariae	195
	The Role of Chitinases in the Infective Larva Stage	198
	Biochemistry and Molecular Biology of Filarial Chitinases	200
	Chitinase-like Proteins in Vertebrates	201
	Immunological Aspects of Filarial Chitinases	204

Acknowledgements	207
References	207
11 Acetylcholinesterase Secretion by Nematodes	211
<i>Murray E. Selkirk, Siân M. Henson, Wayne S. Russell and Ayman S. Hussein</i>	
Introduction and Historical Perspective	211
Cholinesterase Structure and Function	211
Nematode Acetylcholinesterases	212
Acetylcholinesterase Secretion by Parasitic Nematodes	213
Forms and Properties of the Secreted Enzymes	215
Putative Functions for Secreted Acetylcholinesterases	217
Regulation of intestinal peristalsis or local spasm	217
Regulation of intestinal transport processes	218
Regulation of lymphoid/myeloid cell functions	219
Hydrolysis of alternative substrates	220
Binding to ingested AChE inhibitors	220
Acetylcholine Receptor Expression in the Intestinal Tract	221
Nematode Acetylcholinesterases as Drug Targets	222
Concluding Remarks	223
Acknowledgements	224
References	224
12 The Surface and Secreted Antigens of <i>Toxocara canis</i>. Genes, Protein Structure and Function	229
<i>Rick M. Maizels and Alex Loukas</i>	
Introduction	229
Developmental Biology of <i>Toxocara</i>	230
Immune Evasion	230
Excreted/Secreted Glycoproteins (TES)	231
Recombinant Excreted/Secreted Proteins	231
TES-26, Tc-PEB-1, phosphatidylethanolamine-binding protein	232
TES-32, Tc-CTL-1, G-type lectin-1	233
TES-45 and TES-55	236
TES-70, Tc-CTL-4, G-type lectin-4	236
TES-120, Tc-MUC-1, MUC-2 and MUC-3 mucins	237
TES-400	237
Novel ES proteins?	238
Secreted Enzymes	238
Proteases	238
Superoxide dismutases	238
The Surface Coat	239
The NC6/SXC Domain in <i>T. canis</i>	239

Venom Allergen Homologues: Tc-CRISP (Tc-VAH-1) and Tc-VAH-2	240
Carbohydrate Moieties	241
Concluding Remarks	242
Acknowledgements	242
References	243
13 Nematode Gut Peptidases, Proteins and Vaccination	247
<i>David P. Knox, Philip J. Skuce, George F. Newlands and Diane L. Redmond</i>	
Introduction	247
The Nematode Gut	248
Proteins at the Microvillar Surface	248
Contortin	248
H11	251
GA1 antigens	252
P150	253
H-gal-GP	253
Cysteine proteases	257
Gut Antigen-based Vaccination and Non-blood-feeders	260
Glycosylation of Parasite Protein	262
Integral Membrane Proteins and Membrane Anchors	262
Concluding Remarks	264
References	265
14 Metabolic Transitions and the Role of the Pyruvate Dehydrogenase Complex During Development of <i>Ascaris suum</i>	269
<i>Richard Komuniecki and Patricia R. Komuniecki</i>	
Introduction	269
Anaerobic Mitochondrial Metabolism	270
The Role of the PDC During Development	273
PDC and Metabolic Transitions	277
Concluding Remarks	279
References	279
15 Novel Carbohydrate Structures	285
<i>Anne Dell, Stuart M. Haslam and Howard R. Morris</i>	
Introduction	285
Glycoproteins	286
The biosynthesis of N-glycans	287
The biosynthesis of O-glycans	289
Glycolipids	291

<i>Toxocara</i> Methylated O-glycans†	292
Novel Fucosylated N-glycan Core Structures in <i>Haemonchus contortus</i>	293
Multi-antennary Lewis ^x N-glycans in <i>Dictyocaulus viviparus</i>	296
Phosphorylcholine-substituted N-glycans of Filarial Nematodes	297
The Tyvelose Immunodominant Epitope of <i>Trichinella spiralis</i>	299
Concluding Remarks	300
Acknowledgements	301
References	301
16 Structurally Novel Lipid-binding Proteins	309
<i>Malcolm W. Kennedy</i>	
Introduction	309
The Importance of Lipid-binding Proteins	310
The Different Types of Lipid-binding Protein	311
The Polyproteins of Nematodes: NPAs	313
NPA Biosynthesis and the Gene	314
Structure of NPAs	317
Functions of NPAs	317
Polyfunctional Polyproteins?	318
The LBP-20 Proteins	319
The β -Barrel FABPs	320
As-p18, the First Secreted Cytoplasmic Lipid-binding Protein	320
Sticky Finger Interaction Sites?	323
Concluding Remarks	324
References	325
Part IV Immunology and Immunomodulation	
17 T Helper Cell Cytokine Responses During Intestinal Nematode Infection: Induction, Regulation and Effector Function	331
<i>David Artis and Richard K. Grencis</i>	
Introduction	331
T Cell and Cytokine Regulation of Host Protective Immunity	333
Resistance to Infection Requires a Type 2 Response	334
Type 1 Cytokine Responses Promote Susceptibility	338
Nematode Cytokines?	339
Regulation of Th Responses During Nematode Infection	341
Genetic control of Th responses	341
Professional antigen-presenting cells	342
Non-professional antigen-presenting cells	343
Co-stimulatory molecules	344

Nature of antigens	346
Antigen dose and affinity	347
Cytokine environment	347
Generic pathogen recognition	348
Chemokines	349
Immune effector mechanisms	349
Immune effectors: antibody	350
Immune effectors: mast cells	351
Immune effectors: eosinophils	353
Immune effectors: cytokines and enterocytes	354
Concluding Remarks	356
Acknowledgements	357
References	357
18 Gut Immunopathology in Helminth Infections – Paradigm Lost?	373
<i>Catherine E. Lawrence, Malcolm W. Kennedy and Paul Garside</i>	
Introduction	373
Pathology of Nematode Infections	374
Enteropathies of Other Aetiologies	375
The Paradox	376
Pathology and Nematode Expulsion	376
Tumour Necrosis Factor Induces Pathology via iNOS	379
Th2 Involvement in Pathological Responses in Other Helminth Infections	380
Effector Cells in Induction of Enteropathy	381
Pathophysiological Effects of Helminth-induced Cytokines	382
Goblet Cells in Enteropathy	384
Matrix Metalloproteases in Enteropathy	385
Role of Microbial Flora in the Development of Enteropathy	386
Parasite Advantage in Induction of Pathology	386
Concluding Remarks	387
References	388
19 Immunomodulation by Filarial Nematode Phosphorylcholine-containing Glycoproteins	399
<i>William Harnett and Margaret M. Harnett</i>	
Introduction	399
Finding a Role for PC on Secreted Filarial Nematode Glycoproteins	400
Immunological Defects Associated with Human Filarial Nematode Infection: a Role for PC?	401
Inhibition of Lymphocyte Proliferation by PC on ES-62	402
Mechanism of Action of ES-62/PC	403

Effects of PC on Antibody and Cytokine Responses	406
Concluding Remarks	410
Acknowledgements	410
References	410
Part V Neurobiology	
20 Nematode Neuropeptides	415
<i>Aaron G. Maule, Nikki J. Marks and David W. Halton</i>	
Introduction	415
Neuropeptide Localization	417
Distribution of FMRFamide-related Peptides (FaRPs) in Nematodes	418
FaRP distribution in <i>Ascaris suum</i>	418
FaRP distribution in <i>Caenorhabditis elegans</i>	419
FaRP distribution in other nematodes	421
Distribution of Other Neuropeptides in Nematodes	422
Neuropeptide Structure	422
<i>A. suum</i> neuropeptides	423
<i>C. elegans</i> neuropeptides	424
Other nematode neuropeptides	425
Neuropeptide Function	427
The effects of known <i>A. suum</i> FaRPs	427
The effects of other nematode FaRPs	430
FaRP effects on <i>C. elegans</i>	431
FaRP effects on <i>H. contortus</i>	432
<i>flp</i> -Gene Expression and Processing	433
Nematode Neuropeptide Receptors	433
Concluding Remarks	435
Acknowledgements	435
References	436
21 Neurobiology of Nematode Muscle: Ligand-gated Ion-channels and Anti-parasitic Drugs	441
<i>Richard J. Martin, Alan P. Robertson, Momtchil A. Valkanov, Jenny Purcell and S. Lowden</i>	
Introduction	441
Ligand-gated Ion Channels	442
The two-micropipette current-clamp technique for examining the massed responses of ion channels on <i>Ascaris</i> body muscle	443
Muscle-vesicle for recording single-channel properties of levamisole receptors	446

<i>Oesophagostomum dentatum</i> as a Model Nematode for Anthelmintic Resistance	448
Receptor Heterogeneity	451
Variation in conductance	451
Variation in <i>P-open</i>	453
Differences between Sensitive and Resistant Isolates	455
Possible Explanations for Receptor Heterogeneity	455
Multiple alleles	456
Glutamate-gated Chloride Channels	459
GABA-gated Chloride Channel Receptors	461
Concluding Remarks	463
References	464
Index	467
