

# Principles of Tropical Agronomy

S.N. Azam-Ali  
and G.R. Squire

CABI Publishing

# Contents

---

<b>Preface</b>	<b>vii</b>
<b>Acknowledgements</b>	<b>viii</b>
<b>1 Contexts</b>	<b>1</b>
1.1 The boundaries, scale and scope of agronomy	1
1.2 The broad dominance of climate	3
1.3 The influence of soil and topography	12
1.4 Climates, crops, soils, people	16
1.5 Agronomic experiment and analysis	17
<b>Part I: Resource Flows and Currencies</b>	
<b>2 Solar Radiation</b>	<b>23</b>
2.1 The solar spectrum and plant processes	23
2.2 The fate of radiation in crop systems	29
2.3 Conclusions	36
<b>3 Water</b>	<b>37</b>
3.1 The hydrological cycle	37
3.2 Soil water energy	38
3.3 Plant water energy	44
3.4 Evaporation	45
3.5 The fate of water in crop systems	49
3.6 Conclusions	52
<b>Part II: Essential Choices: Genotype, Timing, Configuration</b>	
<b>4 Genotype (What?)</b>	<b>53</b>
4.1 Evolution and genetic manipulation	54
4.2 Characteristics of the main crop types	66
4.3 Genetic modification within species	74
4.4 Conclusions	83
<b>5 Timing (When?)</b>	<b>85</b>
5.1 Characteristics of timing in crops	85

5.2 Development and resource capture	88
5.3 Environmental control of timing	89
5.4 Regulation of timing by management and choice of cultivar	98
5.5 Conclusions	104
<b>6 Configuration (How?)</b>	<b>107</b>
6.1 Plant population	108
6.2 Mixed cropping	115
6.3 Calculating the performance of intercrops	124
6.4 Conclusions	127
<b>Part III: Integration</b>	
<b>7 Manipulating fluxes</b>	<b>129</b>
7.1 A simple frame of reference	129
7.2 Empirical input–yield responses	132
7.3 Understanding the input–yield response	137
7.4 Scale and integration: extending the principles	146
<b>8 Synthesis</b>	<b>151</b>
8.1 Some major developments in agricultural research	151
8.2 Assessing the potential of underutilized crops: a case study of bambara groundnut	170
8.3 The status and contribution of agronomy	186
<b>References</b>	<b>197</b>
<b>Appendix I</b>	<b>211</b>
<b>Index</b>	<b>233</b>
