# DETAILED CONTENTS

Preface	xix
Acknowledgments	xxi

## CHAPTER 1

---

### **Pests, People, and Integrated Pest Management 1**

Introduction	1
Definition of pest	3
Applied ecology	5
Pest Status	5
Pest organisms	7
Crop (host plants)	7
Environment	8
Time	8
Importance of Pests	8
Overall losses caused by pests	9
Pest Management	10
IPM defined	11
Our concept	11
Historical perspective	13
Human population perspective	13
Pesticide perspective	13

## CHAPTER 2

---

### **Pests and Their Impacts 15**

General Impact of Pests	15
Consumption of plant parts	15
Chemical toxins, elicitors, and signals	16
Physical damage	16
Loss of harvest quality	16
Cosmetic damage/aesthetics	17
Vectoring of pathogens	17
Direct contamination	17

Costs incurred to implement control measures	17
Environmental and social costs	17
Embargo, quarantines, and shipment costs	17
Plant Pathogens	19
Description of organisms	19
Special problems caused by plant pathogens	21
Weeds	22
Description of organisms	22
Special problems caused by weeds	22
Nematodes	27
Description of organisms	27
Special problems caused by nematodes	31
Mollusks	32
Description of organisms	32
Special problems caused by mollusks	32
Arthropods	33
Description of organisms	33
Special problems caused by arthropods in relation to plants	42
Vertebrates	43
Description of organisms	43
Special problems caused by vertebrates	44

## **CHAPTER 3**

---

### **Historical Development of Pest Management 47**

<i>Introduction</i>	47
Ancient Times (10,000 B.C.E. to 0)	48
Summary of events	48
Important dates during ancient times	48
C.E. 1 to Middle Ages	51
Summary of events	51
Important dates	52
Seventeenth Century	52
Summary of events	52
Important dates in the seventeenth century	53
Eighteenth Century	53
Summary of events	53
Important dates in the eighteenth century	54
Nineteenth Century	54
Summary of events	54
Important dates in the nineteenth century	55
Early Twentieth Century (1900 to 1950)	58
Summary of events	58
Important dates in the early twentieth century	59
Late Twentieth Century (1951 to 2000)	62
Summary of events	62
Important dates in the late twentieth century	63

## **CHAPTER 4**

---

### **Ecosystems and Pest Organisms 66**

Introduction 66

Ecosystem Organization and Succession 67

    Concept of succession 68

Definitions and Terminology 71

    Herbivore and herbivory 71

    Carnivore 71

    Omnivore 71

    Monophagous 72

    Oligophagous 72

    Polyphagous 72

    Host 72

    Prey 72

    Predators 72

    Parasites and parasitoids 72

    Hyperparasites and hyperparasitoids 72

Trophic Dynamics 72

    General concepts 72

    Bottom-up versus top-down processes 74

    Basic food chain (arthropods, nematodes, vertebrates) 75

    Pathogen food chain 76

    Weed food chain 77

    Food webs 77

    Animal-based food web 79

    Summary of trophic relationships 80

Limiting Resources and Competition 80

    Carrying capacity and logistic growth 80

    r-selected versus K-selected organisms 84

    Competition 85

    Density-dependent phenomena 86

## **CHAPTER 5**

---

### **Comparative Biology of Pests 90**

Introduction 90

Concepts Involved in Pest Population Regulation 91

    Reproduction 91

    Fecundity and fertility 95

    Population generation time 98

    Cycles per season 98

    Longevity and mortality 99

    Quiescence and dormancy 103

    Heat summation and degree-days 106

    Molting and metamorphosis 108

    Life tables 110

    Basic life cycle models 113

Dissemination, Invasion, and Colonization Processes	115
Mechanisms of dissemination	116
Seasonal migration and movements	121
Pest Genetics	122
Genetic variability	122
Pathogens	123
Weeds	124
Nematodes	124
Mollusks and vertebrates	126
Arthropods	126
Pest genetics summary	127

## **CHAPTER 6**

---

<b>Ecology of Interactions Between Categories of Pests</b>	<b>128</b>
Introduction	128
Energy/Resource Flow (Trophic Dynamics) Interactions	130
Multiple primary consumer attack	131
Direct interactions	132
Indirect interactions	137
Polytrophic interactions (direct and indirect)	141
Tritrophic interactions	142
Habitat Modification	142
Altered resource concentration	142
Altered apparency	143
Microenvironment alteration	143
Summaries and Importance of Interactions Driven by Food Source or Habitat Modification	146
Pathogens	146
Nematodes	147
Mollusks	147
Arthropods	147
Vertebrates	148
Interactions Due to Physical Phenomena	148
Physical damage to host	148
Physical external transport	149
Physical internal transport	149
IPM Implications and Economic Analysis of Pest Interactions	151

## **CHAPTER 7**

---

<b>Ecosystem Biodiversity and IPM</b>	<b>155</b>
Introduction	155
Biodiversity and Agriculture	155
Scales of diversity	157
Benefits of biodiversity	158
Biodiversity Explained	159
Significance of Biodiversity to IPM	162
Pathogen management	162

Weed management	163
Nematode management	163
Mollusk management	164
Arthropod management	164
Vertebrate pest management	167
Using Biodiversity in IPM Systems	168
The cost-benefit approach	168
Special considerations/applicability	169

## **CHAPTER 8**

---

### **Pest Management Decisions 172**

Introduction	172
Diagnosis of the Problem	174
Pest identity	174
Monitoring	176
Spatial pattern of pests	177
Statistics of sampling	181
Techniques for Assessing Pest Populations	183
Pest monitoring	183
Overall monitoring considerations	184
Specific monitoring devices and techniques	185
Sampling considerations	193
Sequential sampling	195
Crop sampling	195
Sampling patterns	196
Record keeping	196
Training	197
Thresholds	197
The damage concept	197
Economic injury level	199
Types of thresholds	200
Examples of thresholds	202
Limitations of thresholds	202
Other Factors that Affect Pest Management Decisions	203
Cropping history	203
Field location and size	204
Weather monitoring	204
Models for forecasting events	205
Cosmetic standards	205
Risk assessment/safety	206
Economics	206
Summary	207

## **CHAPTER 9**

---

### **Introduction to Strategies and Tactics for IPM 209**

Introduction	209
Major IPM Strategies	209

**Detailed Contents**

IPM Tactics	210
Pest manipulation	210
Crop plant manipulation	212
Environmental manipulation	212
Additional Concepts	212
Pest resistance	213
Selectivity of control	213

**CHAPTER 10**

---

**Pest Invasions and Legislative Prevention 214**

Introduction	214
Historical Perspectives	214
Wheat rust story	215
Overview of exotic pests	216
Extent and costs	218
Invasion and Introduction Mechanisms	224
Ecological perspective	224
Intentional introductions	224
Accidental introductions	226
Introductions by unknown mechanism	228
The Regulatory Premise	228
Legal Aspects of Preventing Invasions	229
Legislation to regulate pest transport	229
International regulations	230
National regulations	231
Major laws in the USA	231
Pest Risk Assessment	232
Definition difficulties	232
Pest risk analysis	232
Regulatory options	233
Exclusion	234
Pest interception tactics	234
Enforcement actions	236
Early Detection	237
Containment, Control, or Eradication	237
Containment	237
Control	237
Eradication	238
Summary	239

**CHAPTER 11**

---

**Pesticides 242**

Introduction	242
Advantages of pesticides	243
Disadvantages of pesticides	244
Current use	245

Types of Pesticides	249
Historical Aspects	250
Inorganic chemicals	250
Synthetic organic chemicals	255
Biopesticides	255
Pesticide Discovery Process	257
Chemical Characteristics	259
Pesticide nomenclature	259
Chemical relationships	262
Modes of action of synthetic organic pesticides	264
Pesticide acquisition by pests	266
Classification of pesticides by application timing	269
Application Technology	270
Formulations	270
Adjuvants	272
Application equipment/technology	273
Environmental Considerations	280
Volatility	280
Drift	281
Pesticide behavior in soil	284
Interactions Between Pesticides	290
Formulation incompatibility	290
Altered crop tolerance	290
Alteration of efficacy	290
Toxicity of Pesticides	291
Dose/response relationship	291
Acute toxicity	292
Chronic toxicity	294
Types of exposure	295
Hazard	295
Residues	297
Tolerance	297
Reentry interval	298
Preharvest interval	298
Legal Aspects of Pesticide Use	298
<i>Overview of pesticide regulations</i>	298
History of pesticide regulation	299
Codes and regulations	300
Major requirements of FIFRA	301
Restricted-use pesticides	301
Requirements for federal registration of a pesticide with the EPA	302
The pesticide label	303
State and local pesticide regulation	306
Pesticide users	307
Pesticide use reporting	308
Protection of pesticide users	308
Illnesses from pesticides	310
Consumer Protection	311
Surveys of pesticide residues in food	311

**CHAPTER 12**

---

***Resistance, Resurgence, and Replacement* 314**

- Introduction 314
- Resistance 315
  - Historical development and extent 317
  - Resistance terminology 318
  - Development of resistance 319
  - Fitness 321
  - Intensity of resistance 321
  - Rate of resistance development 321
  - Mechanisms of resistance 323
  - Measuring resistance 324
  - Resistance management 325
  - Implementation problems 327
  - Examples of resistance/management 328
- Resurgence 332
- Replacement 333
- Warning About the Three Rs 335

**CHAPTER 13**

---

**Biological Control 337**

- Introduction 337
- Why Biological Control? 339
- Biological Control Concepts 340
  - Definitions 340
  - The concept 340
  - Trophic relations revisited 341
  - Additional concepts and terms 344
  - Fundamental principles 345
  - Constraints to biocontrol 349
- Types of Biological Control and Implementation 353
  - Classical biological control 353
  - Inoculative biological control 353
  - Augmentative biological control 353
  - Inundative biological control 354
  - Conservation biological control 354
  - Competitive exclusion 355
  - Induction of suppressive soils 355
- Examples of Biocontrol Using Various Agents 355
  - Pathogenic parasites as natural enemies 356
  - Plants, including weeds, as agents 360
  - Nematodes as agents 361
  - Mollusks as agents 362
  - Arthropods as agents 363
  - Vertebrates as agents 368
- Summary 370

## **CHAPTER 14**

---

### **Behavioral Control 373**

#### Introduction 373

Advantages and disadvantages of behavioral control 374

Animal behavior 374

Modalities of behavioral control methods 375

#### Vision-Based Tactics 376

Vision-based tactics for arthropods 376

Vision-based tactics for vertebrates 377

#### Auditory-Based Tactics 378

#### Olfaction-Based Tactics 379

Definitions and principles 379

Chemistry and synthesis of semiochemicals 382

Delivery technology 383

Application of semiochemicals in IPM 384

#### Food-Based Tactics 387

## **CHAPTER 15**

---

### **Physical and Mechanical Tactics 389**

#### Introduction 389

#### Environmental Modification 390

Temperature 390

Water 394

Light 396

#### Physical Exclusion of Pests 398

Barriers 398

Physical traps 400

#### Direct Control of Pests 402

Shooting 402

Hand labor 402

Mechanical tillage/cultivation 404

Specialized mechanical tactics 411

## **CHAPTER 16**

---

### **Cultural Management of Pests 413**

#### Introduction 413

#### Prevention 415

Possibilities 415

Prevent transport of pests 415

Plant crop free of pests 416

Limitations 418

#### Sanitation 418

Possibilities 418

Limitations 419

Crop Host-Free Periods	419
Possibilities	419
Limitations	421
Controlling Alternative Hosts	421
Possibilities	421
Limitations	423
Rotations	423
Possibilities	423
Limitations	424
Fallow	425
Planting Dates	425
Possibilities	425
Limitations	428
Crop Density/Spacing	428
Possibilities	428
Limitations	429
Priming or Pregerminating the Crop	429
Possibilities	429
Limitations	430
Deep Planting	430
Transplanting	430
Possibilities	430
Limitations	431
Soil Conditions	431
Possibilities	431
Limitations	433
Fertility	433
Possibilities	433
Limitations	434
Nurse Crops	434
Possibilities	434
Limitations	435
Trap Crops	435
Possibilities	435
Trap crop as preferred hosts	435
Trap crop as hatch/germination stimulant	437
Limitations	437
Antagonistic Plants	437
Possibilities	437
Limitations	438
Modifying Harvest Schedules	438
Possibilities	438
Limitations	440
Crop Varieties	440
Intercropping	440
Possibilities	440
Limitations	441
Hedgerows, Field Margins, and Refugia	441
Summary	441

## **CHAPTER 17**

---

### **Host-Plant Resistance and Other Genetic Manipulations of Crops and Pests 443**

- Introduction 443
- Host-Plant Resistance 444
  - Advantages of host-plant resistance for pest management 444
- Conventional Plant Breeding 446
  - Principles 446
  - Mechanisms of resistance 447
  - Physiological bases of resistance 448
  - Genetics of resistance 449
  - Examples of conventional plant breeding for resistance 451
  - Limitations 456
- Genetic Engineering 457
  - Principles 457
  - Examples of genetic engineering for pest management 459
  - Adoption of transgenic crops 465
  - Limitations 466
- Applications of Pest Genetics in IPM 468
- Summary 469

## **CHAPTER 18**

---

### **IPM Programs: Development and Implementation 471**

- IPM Revisited 471
  - Definitions 471
  - Goals of IPM 472
  - IPM strategies 473
  - Levels of IPM and integration 478
- IPM Program Development 480
  - Key aspects of IPM programs 481
  - General considerations 483
- Examples of IPM Programs 483
  - IPM for lettuce 484
  - IPM for cotton 486
  - IPM for pome fruits 490
- IPM Program Implementation 491
  - Critical issues 493
  - IPM practitioners 493
  - Sources of IPM information 495
  - Adoption of IPM programs 497
- Summary 499

## **CHAPTER 19**

---

### **Societal and Environmental Limitations to IPM Tactics 501**

- Societal Constraints and Public Attitudes 501
  - Involvement in agricultural production 502

Pest invasions	503
Cosmetic standards	503
Preferences, food quality, and pesticide use in IPM	504
Pest management alternatives to the use of pesticides	506
Conflict of interest	506
Environmental Issues	506
Soil erosion	506
Air pollution	507
Endangered species	507
Food chain considerations	507
Wetlands	509
Groundwater contamination	509
Significance of release of genes	510
Significance of release of biological control agents	511
Impacts on biodiversity	511
Summary	512

## **CHAPTER 20**

---

### **IPM in the Future 514**

Introduction	514
How to Measure Progress in IPM	515
Directions of Possible Changes	516
Pest biology and ecology	516
Pest monitoring and decision making	516
Legislative controls	517
Pesticides	518
Managing resistance, resurgence, and replacement	518
Biological control	518
Behavioral controls	518
Cultural tactics	519
Physical and mechanical controls	519
Host-plant resistance/plant breeding	519
IPM systems	520
Pest control advising	520
Strategic Developments	520
Summary	521

### **Sources and References 523**

### **Pest Organisms 533**

### **Glossary 543**

### **Index 575**
