

Coleman Brosilow/Babu Joseph

Techniques of Model-Based Control

Prentice Hall International Series
in the Physical and Chemical
Engineering Sciences

T A B L E O F C O N T E N T S

Preface xv

Acknowledgements xxi

1 Introduction 1

- 1.1 Nature of the Process Control Problem 2*
- 1.2 Overview of Model-Based Control 9*
- 1.3 Summary 10*

2 Continuous-Time Models 13

- 2.1 Introduction 13*
- 2.2 Process Model Representations 14*
- 2.3 Time Domain Models 16*
- 2.4 Laplace Domain Models 18*
- 2.5 The First-Order Plus Dead Time Process 28*
- 2.6 Summary 31*

3 One-Degree of Freedom Internal Model Control 39

- 3.1 *Introduction* 40
- 3.2 *Properties of IMC* 41
- 3.3 *IMC Designs for No Disturbance Lag* 44
- 3.4 *Design for Processes with No Zeros Near the Imaginary Axis or in the Right Half of the s -Plane* 46
- 3.5 *Design for Processes with Zeros Near the Imaginary Axis* 47
- 3.6 *Design for Processes with Right Half Plane Zeros* 49
- 3.7 *Problems with Mathematically Optimal Controllers* 53
- 3.8 *Modifying the Process to Improve Control System Performance* 58
- 3.9 *Software Tools for IMC Design* 59
- 3.10 *Summary* 60

4 Two-Degree of Freedom Internal Model Control 65

- 4.1 *Introduction* 66
- 4.2 *Structure of 2DF IMC* 68
- 4.3 *Design for Stable Processes* 70
- 4.4 *Design for Unstable Processes* 76
- 4.5 *Software Tools for 2DF IMC Designs* 81
- 4.6 *Summary* 82

5 Model State Feedback Implementations of IMC 85

- 5.1 *Motivation* 86
- 5.2 *MSF Implementations of 1DF IMC* 93
- 5.3 *SIMULINK Realizations of MSF Implementations of IMC* 99
- 5.4 *Finding A Safe Lower Bound on the MSF Filter Time Constant* 104
- 5.5 *MSF Implementations of 2DF IMC* 110
- 5.6 *Summary* 112

6 PI and PID Parameters From IMC Designs 113

- 6.1 *Introduction* 114
- 6.2 *The PID Controller* 115
- 6.3 *1DF PID Parameters from 1DF IMC* 115
- 6.4 *Algorithms and Software for Computing PID Parameters* 124
- 6.5 *Accommodating Negative Integral and Derivative Time Constants* 126
- 6.6 *2DF PID Parameters from 2DF IMC* 129
- 6.7 *Saturation Compensation* 131
- 6.8 *Summary* 133

7 Tuning and Synthesis of 1DF IMC for Uncertain Processes 135

- 7.1 Introduction 136*
- 7.2 Process Uncertainty Descriptions 139*
- 7.3 Mp Tuning 144*
- 7.4 Conditions For Existence of Solutions to The Mp Tuning Problem 155*
- 7.5 Robust Stability 163*
- 7.6 Mp Synthesis 167*
- 7.7 Software for Mp Tuning and Synthesis 175*
- 7.8 Summary 175*

8 Tuning and Synthesis of 2DF IMC for Uncertain Processes 179

- 8.1 Introduction 180*
- 8.2 Mp Tuning for Stable, Overdamped Uncertain Processes 181*
- 8.3 Mp Synthesis for Stable, Overdamped Processes 188*
- 8.4 Tuning for Underdamped and Unstable Processes 193*
- 8.5 Mp Synthesis for Underdamped and Unstable Processes 210*
- 8.6 Summary 218*

9 Feedforward Control 221

- 9.1 Introduction 222*
- 9.2 Controller Design when Perfect Compensation Is Possible 224*
- 9.3 Controller Design when Perfect Compensation Is Not Possible 225*
- 9.4 Controller Design for Uncertain Processes 228*
- 9.5 Summary 238*

10 Cascade Control 241

- 10.1 Introduction 242*
- 10.2 Cascade Structures and Controller Designs 244*
- 10.3 Saturation Compensation 263*
- 10.4 Summary 267*

11 Output Constraint Control (Override Control) 269

- 11.1 Introduction 270*
- 11.2 Override and Cascade Constraint Control Structures 270*
- 11.3 Cascade Constraint Control 272*
- 11.4 Summary 281*

12 Single Variable Inferential Control (IC) 283

- 12.1 Introduction 284*
- 12.2 Classical Control Strategies 286*
- 12.3 Inferential Control 291*
- 12.4. Summary 304*

13 Inferential Estimation Using Multiple Measurements 311

- 13.1 Introduction and Motivation 312*
- 13.2 Derivation of the Steady-State Estimator 314*
- 13.3 Selection of Secondary Measurements 319*
- 13.4 Adding Dynamic Compensation to the Estimators 325*
- 13.5 Optimal Estimation 333*
- 13.6 Summary 337*

14 Discrete-Time Models 343

- 14.1 The Z-Transform Representation 344*
- 14.2 Models of Computer-Controlled Systems 348*
- 14.3 Discrete-Time FIR Models 352*
- 14.4 Discrete-Time FSR Models 354*
- 14.5 Summary 358*

15 Identification: Basic Concepts 363

- 15.1 Introduction 363*
- 15.2 Least-Squares Estimation of Parameters 365*
- 15.3 Properties of the Least-Squares Estimator 369*
- 15.4 General Procedure For Process Identification 378*
- 15.5 Summary 382*

16 Identification: Advanced Concepts 387

- 16.1 Design of Input Signals: PRBS Signals 387*
- 16.2 Noise Prefiltering 394*
- 16.3 Modifications to the Basic Least-Squares Identification 399*
- 16.4 Multiple Input, Multiple Output (MIMO) Systems 401*
- 16.5 A Comprehensive Example 402*
- 16.6 Effect of Prefilter on Parameter Estimates 410*
- 16.7 Software for Identification 412*
- 16.8 Summary 412*

17 Basic Model-Predictive Control 417

- 17.1 Introduction 417*
- 17.2 SISO MPC 420*
- 17.3 Unconstrained Multivariable Systems 436*
- 17.4 State-Space Formulation of Unconstrained SOMPC 439*
- 17.5 Summary 444*

18 Advanced Model-Predictive Control 449

- 18.1 Incorporating Constraints 450*
- 18.2 Incorporating Economic Objectives: The LP-MPC Algorithm 463*
- 18.3 Extension to Nonlinear Systems 473*
- 18.4 Extension to Batch Processes 476*
- 18.4 Summary 480*

19 Inferential Model-Predictive Control 485

- 19.1 Inferential Model Predictive Control (IMPC) 485*
- 19.2 Simple Regression Estimators 491*
- 19.3 Data-Driven Dynamic Estimators 495*
- 19.4 Nonlinear Data-Driven Estimators 498*
- 19.5 Summary 500*

Appendices**A Review of Basic Concepts 503**

- A.1 Block Diagrams 504*
- A.2 Laplace Transform and Transfer Functions 507*
- A.3 P, PI, and PID Controller Transfer Functions 510*
- A.4 Stability of Systems 512*
- A.5 Stability of Closed-Loop Systems 516*
- A.6 Controller Tuning 520*
- A.7 Regulatory Issues Introduced by Constraints 525*

B Review of Frequency Response Analysis 535

- B.1 Introduction 535*
- B.2 Frequency Response from Transfer Functions 539*
- B.3 Disturbance Suppression in SISO Systems: Effect of Constraints 543*
- B.4 Stability in the Frequency Domain 545*
- B.5 Closed-Loop Frequency Response Characteristics 549*

C Review of Linear Least-Squares Regression 557

- C.1 Derivation of the Linear Least-Squares Estimate 557*
- C.2 Properties of the Linear Least-Squares Estimate 559*
- C.3 Measures of Model Fit 561*
- C.4 Weighted Least-Squares 561*
- C.5 Robustness 562*
- C.6 Principal Component Regression 564*

D Review of Random Variables and Random Processes 569

- D.1 Introduction To Random Variables 569*
- D.2 Random Processes and White Noise 572*
- D.3 Spectral Decomposition of Random Processes 573*
- D.4 Multidimensional Random Variables 575*

E MATLAB and Control Toolbox Tutorial 577

- E.1 MATLAB Resources 578*
- E.2 Basic Commands 578*
- E.3 Control System Toolbox Tutorial 585*

F SIMULINK Tutorial 597

- F.1 Basics 597*
- F.2 Creating a Block Diagram in SIMULINK 599*
- F.3 Laplace Transform Models 601*
- F.3 Simulation of Discrete Systems Using SIMULINK 602*

G Tutorial on IMCTUNE Software 609

- G.1 Introduction 610*
- G.2 Getting Started on 1DF Systems 610*
- G.3 Menu Bar for 1DF Systems 616*
- G.4 Getting Started on 2DF Systems 621*
- G.5 Menu Bar for 2DF Systems 624*
- G.6 Getting Started on Cascade Control Systems 625*
- G.7 Menu Bar for Cascade Systems 627*
- G.8 Other Useful .m Files Included with IMCTUNE 628*

H Identification Software 631

- H.1 Introduction 631*
- H.2 POLYID: Description 632*
- H.3 MODELBUILDER 637*
- H.4 PIDTUNER 638*

I SIMULINK Models for Projects 641

- I.1 Naphtha Cracker 641*
- I.2 Shell Heavy Oil Fractionator 650*
- I.3 Temperature and Level Control in a Mixing Tank 656*
- I.4 Pressure and Level Control Experiment 658*
- I.5 Temperature and Level Control 660*
- I.6 Heat Exchanger 661*
- I.7 The Tennessee Eastman Project 663*

INDEX 671
