

# REACTIVE POLYMER BLENDING

Edited by  
W. Baker, C. Scott, G.-H. Hu

Series Editor: Kun Sup Hyun

HANSER

# Contents

<b>1 Introduction</b>	<b>1</b>
1.1 Background	2
1.2 Important Blending Principles	3
1.3 A Historical Perspective on Reactive Blending	7
1.4 The Evolution of Commercial Practice	9
1.4.1 Patents and Products	9
1.4.2 Processing	10
1.5 Summary	11
References	11
<b>2 Types of Reactive Polymers Used in Blending</b>	<b>13</b>
2.1 Introduction	14
2.2 Compatibility in Polymer Blends	15
2.2.1 Basic Concepts	15
2.2.2 Strategies for Blend Compatibilization	15
2.2.2.1 Addition of Block and Graft Copolymers	15
2.2.2.2 Utilization of Non-Bonding Specific Interactions	16
2.2.2.3 Addition of Low Molecular Weight Coupling Agents	16
2.2.2.4 Reactive Compatibilization	17
2.3 Preparation of Reactive Polymers	17
2.4 Types of Compatibilizing Reactions	19
2.5 Types of Reactive Polymers and Their Applications	19
2.5.1 Reactive Polymers Having MAn Functionality	20
2.5.2 Reactive Polymers with Carboxylic Acid Functionality	22
2.5.3 Reactive Polymers Capable of Interchange Reactions	24
2.5.4 Reactive Polymers Containing Primary and Secondary Amines	26
2.5.5 Reactive Polymers Containing Hydroxyl Groups	26
2.5.6 Reactive Polymers Containing Heterocyclic Groups	29
2.5.7 Reactive Polymers Capable of Ionic Interactions	31
2.5.8 Miscellaneous Reactive Polymers	31
2.6 Concluding Remarks	32
List of Abbreviations	34
References	35
<b>3 Reactive Blending with Immiscible Functional Polymers: Molecular, Morphological, and Interfacial Aspects</b>	<b>43</b>
3.1 Introduction	44
3.2 Reactive Versus Physical Blending with Respect to Compatibilization	44
3.2.1 Similarities and Differences	44
3.2.2 Industrial Feasibility and Current Trends	46

<b>5</b>	<b>Morphological and Rheological Aspects of Reactive Polymer Blending</b>	113
5.1	Morphology Development During Blending of Immiscible Polymers	114
5.1.1	The Melting Regime	116
5.1.2	The Melt Flow Regime	120
5.1.3	Final Morphology of Reactive Blends	127
5.1.4	Miscible Reactive Polymer Blends	132
5.2	Rheological Aspects of Reactive Polymer Blending	132
5.2.1	Rheological Changes During Blending	132
5.2.2	Rheology of Reactively Compatibilized Polymer Blends	134
5.3	Conclusions	138
5.4	Future Challenges	139
	References	139
<b>6</b>	<b>Reactive Blending in Screw Extruders</b>	142
6.1	Introduction	143
6.2	Reactive Blending in Mixers	144
6.2.1	Copolymer Formation at Polymer/Polymer Interfaces	145
6.2.1.1	Chemical Considerations	145
6.2.1.2	Copolymer Architecture Considerations	145
6.2.1.3	Kinetics Considerations	145
6.2.1.4	Experimental Assessment of Reaction Kinetics at Polymer-Polymer Interfaces	151
6.2.2	Batch Mixers for Reactive Blending	154
6.2.2.1	Reactive Compatibilization vs. Physical Compatibilization	154
6.2.2.2	Morphology Development	155
6.2.3	Reactive Blending in Screw Extruders	158
6.2.3.1	Non-Reactive vs. Reactive PP/PA6 Blends	163
6.2.3.2	Influence of Screw Configuration	164
6.2.3.3	Influences of Feed Rate and Screw Speed	165
6.2.3.4	Influence of the Maleic Anhydride Modified PP Content	166
6.2.3.5	Correlation Between Morphology and Mechanical Properties	167
6.4	One-Step and Two-Step Reactive Blending Processes	170
6.4.1	PP/PA6 Blends	171
6.4.2	PP/PBT Blends	174
6.5	Concluding Remarks	177
	References	178
<b>7</b>	<b>Extrusion Equipment for Reactive Blending</b>	180
7.1	Extruders Used for Reactive Blending	181
7.2	Mixing Mechanism	185
7.2.1	Distributive and Dispersive Mixing	186
7.2.1.1	Distributive Mixing	186
7.2.1.2	Dispersive Mixing	187
7.2.1.3	Viscosity Ratio and Surface Tension	187
7.2.1.4	Extensional Flow	188
7.2.2	Dissipative Melting	188
7.3	Residence Time and Residence Time Distribution	193

7.4	Devolatilization	194
7.5	Microstructure Development and Monitoring in Reactive Blending	197
7.6	Hybridized Polymer Processing Systems	201
7.7	Conclusions	204
	References	205
<b>8</b>	<b>Rubber Toughening of Polyamides by Reactive Blending</b>	<b>207</b>
8.1	Introduction	208
8.2	Evolution of Polyamide Impact Modification Technology	211
8.3	Comparison of Reactivity vs. Toughening Efficiency of Various Functional Rubbers	216
8.4	Toughening Efficiency of Maleated EP Rubbers	224
	8.4.1 Effect of Maleic Anhydride Content	224
	8.4.2 Effect of Polyamide End Groups	226
8.5	Toughening Efficiency of Maleated Styrene-Ethylene/Butylene-Styrene (M-SEBS) Block Copolymer Rubbers	231
8.6	Effect of Mixtures of Reactive and Non-Reactive (Maleated and Unmaleated) Rubbers	236
8.7	Reactive Toughening of PA6 with Acyllactam-Grafted EP Rubbers	237
8.8	Toughening of Polyamides with Maleated LDPE	239
8.9	High Impact Polyamide/ABS Blend	241
8.10	Toughening Mechanisms in Rubber Modified Polyamides	243
	8.10.1 Role of Rubber Particle Size on Polyamide Toughness	243
	8.10.2 Role of Rubber Particle Cavitation on the PA Matrix Toughening	245
8.11	Rubber Toughening of Reinforced Polyamides	246
8.12	Applications of Rubber Toughened Polyamide	247
8.13	High Rubber/Polyamide Blends	248
8.14	Polyamide/Reactive Rubber Blending Process	250
8.16	Future Directions in Rubber Toughened Polyamides	251
