

 WILEY

an introduction to

# ATM networks

HARRY G. PERROS

# Contents

<b>Preface</b>	<b>xi</b>
<b>List of Abbreviations</b>	<b>xv</b>
<b>Part 1: Introduction and Background</b>	<b>1</b>
<b>1 Introduction</b>	<b>3</b>
1.1 The Asynchronous Transfer Mode	3
1.2 Standards Committees	4
Problems	9
<b>2 Basic Concepts from Computer Networks</b>	<b>11</b>
2.1 Communication Networking Techniques	11
2.2 The Open System Interconnection (OSI) Reference Model	13
2.3 Data Link Layer	14
2.4 The High Data Link Control (HDLC) Protocol	18
2.5 Synchronous Time Division Multiplexing (TDM)	20
2.6 The Logical Link Control (LLC) Layer	22
2.7 Network Access Protocol X.25	24
2.8 The Internet Protocol (IP)	26
2.8.1 The IP Header	26
2.8.2 IP Addresses	28
2.8.3 ARP, RARP and ICMP	30
2.8.4 IP Version 6 (IPv6)	31
Problems	31
<b>3 Frame Relay</b>	<b>33</b>
3.1 Motivation and Basic Features	33
3.2 The Frame Relay UNI	35
3.3 Congestion Control	38
Problems	41
<b>Part 2: The ATM Architecture</b>	<b>43</b>
<b>4 Main Features of ATM Networks</b>	<b>45</b>

4.1	Introduction	45
4.2	Structure of the ATM Cell Header	48
4.2.1	Generic Flow Control (GFC)	48
4.2.2	Virtual Path Identifier/Virtual Channel Identifier (VPI/VCI)	48
4.2.3	Payload Type Indicator (PTI)	50
4.2.4	Cell Loss Priority (CLP) Bit	51
4.2.5	Header Error Control (HEC)	51
4.3	The ATM Protocol Stack	52
4.3.1	The Physical Layer	52
4.3.2	The ATM Layer	53
4.3.3	The ATM Adaptation Layer	55
4.3.4	Higher Level Layers	56
4.4	ATM Interfaces	56
4.5	The Physical Layer	58
4.5.1	The Transmission Convergence (TC) Sublayer	58
4.5.2	The Physical Medium-Dependent (PMD) Sublayer	59
4.5.3	ATM Physical Layer Interfaces	60
4.6	UTOPIA and WIRE	64
	Problems	64
<b>5</b>	<b>The ATM Adaptation Layer</b>	<b>67</b>
5.1	Introduction	67
5.2	ATM Adaptation Layer 1 (AAL 1)	69
5.2.1	The AAL 1 SAR sublayer	69
5.2.2	The AAL 1 CS sublayer	71
5.3	ATM Adaptation Layer 2 (AAL 2)	73
5.4	ATM Adaptation Layer 3/4 (AAL 3/4)	76
5.5	ATM Adaptation Layer 5 (AAL 5)	79
	Problems	80
<b>6</b>	<b>ATM Switch Architectures</b>	<b>81</b>
6.1	Introduction	81
6.2	Space-Division Switch Architectures	83
6.2.1	The Cross-Bar Switch	83
6.2.2	Banyan Networks	86
6.2.3	Clos Networks	93
6.2.4	Switch Architectures with $N^2$ Disjoint Paths	93
6.3	Shared Memory ATM Switch Architectures	94
6.4	Shared Medium ATM Switch Architectures	96
6.5	Nonblocking Switches with Output Buffering	98
6.6	Multicasting in an ATM Switch	99
6.7	Scheduling Algorithms	100
6.8	The Lucent AC120 Switch	103
6.9	Performance Evaluation of an ATM Switch	105
	Problems	106
	Appendix: A Simulation Model of an ATM Multiplexer—Part 1	107

<b>7 Congestion Control in ATM Networks</b>	<b>111</b>
7.1 Traffic Characterization	111
7.1.1 Standardized Traffic Descriptors	114
7.1.2 Empirical Models	114
7.1.3 Probabilistic Models	115
7.2 Quality of Service (QoS) Parameters	117
7.3 ATM Service Categories	120
7.4 Congestion Control	122
7.5 Preventive Congestion Control	122
7.6 Call Admission Control (CAC)	123
7.6.1 Equivalent Bandwidth	125
7.6.2 The ATM Block Transfer (ABT) Scheme	128
7.6.3 Virtual Path Connections	129
7.7 Bandwidth Enforcement	131
7.7.1 The Generic Cell Rate Algorithm (GCRA)	132
7.7.2 Packet Discard Schemes	135
7.8 Reactive Congestion Control	136
7.8.1 The Available Bit Rate (ABR) Service	136
Problems	141
Appendix: A Simulation Model of an ATM Multiplexer—Part 2	142
Appendix: Estimating the ATM Traffic Parameters of a Video Source	144
 <b>Part 3: Deployment of ATM</b>	 <b>147</b>
 <b>8 Transporting IP Traffic Over ATM</b>	 <b>149</b>
8.1 Introduction	149
8.2 LAN Emulation (LE)	150
8.3 Classical IP and ARP over ATM	154
8.3.1 ATMARP	155
8.3.2 IP Multicasting over ATM	156
8.4 Next Hop Resolution Protocol (NHRP)	160
8.5 IP Switching	163
8.6 Tag Switching	166
8.7 Multi-Protocol Label Switching (MPLS)	172
Problems	174
 <b>9 ADSL-Based Access Networks</b>	 <b>175</b>
9.1 Introduction	175
9.2 The ADSL Technology	178
9.2.1 The Discrete Multi-Tone (DMT) Technique	180
9.2.2 Bearer Channels	181
9.2.3 The ADSL Super Frame	182
9.3 Schemes for Accessing Network Service Providers	182
9.3.1 The L2TP Access Aggregation Scheme	184
9.3.2 The PPP Terminated Aggregation Scheme	185
Problems	186

<b>Part 4: Signaling in ATM Networks</b>	<b>187</b>
<b>10 Signaling over the UNI</b>	<b>189</b>
10.1 Connection Types	189
10.2 The Signaling Protocol Stack	190
10.3 The Signaling ATM Adaptation Layer (SAAL)	190
10.3.1 The SSCOP	191
10.3.2 Primitives	192
10.4 The Signaling Channel	194
10.5 ATM Addressing	195
10.6 The Format of the Signaling Message	197
10.7 The Signaling Protocol Q.2931	199
10.7.1 Information Elements (IE)	199
10.7.2 Q.2931 Messages	202
10.8 The Signaling Protocol Q.2971	204
10.9 Leaf Initiated Join (LIJ) Capability	206
10.10 ATM Anycast Capability	208
Problems	209
<b>11 The Private Network-Network Interface (PNNI)</b>	<b>211</b>
11.1 Introduction	211
11.2 The PNNI Routing Protocol	212
11.2.1 The Lowest-Level Peer Groups	212
11.2.2 The Next Level of Peer Groups	214
11.2.3 Uplinks	215
11.2.4 Information Exchange in the PNNI Hierarchy	216
11.2.5 The Highest-Level Peer Group	217
11.2.6 A Node's View of the PNNI Hierarchy	219
11.2.7 Address Summarization	220
11.2.8 Level Indicators	222
11.2.9 Path Selection	222
11.3 The PNNI Signaling Protocol	223
Problems	224
<b>Appendix: List of standards</b>	<b>227</b>
<b>Index</b>	<b>229</b>
