

*Special Edition*  
**Using**  
**Visual C++® .NET**

que

Kate Gregory

# CONTENTS

## **Introduction 1**

Who Should Read This Book? 1

Before You Start Reading 2

What This Book Covers 2

Windows Applications 3

Dialogs and Controls 3

Messages and Commands 4

The View/Document Paradigm 4

Printing on Paper and Saving on  
Disk 4

The Component Object Model 4

The Internet 5

Database Access 5

Advanced Windows Material 5

.NET Programming 5

Getting Started 5

Inter-Language Development 6

Managed and Unmanaged Code 6

Web Services 6

Database Programming 6

COM Interop 6

Security 6

Conventions Used in This Book 7

Time to Get Started 8

## **1 .NET Background 9**

What Is .NET? 10

Why Write an XML Web Service? 13

What About Existing MFC  
Applications? 15

What About COM Developers? 16

Will C++ Be the Right Language for  
.NET? 17

What Should a New .NET Programmer  
Learn? 19

From Here 20

## **2 Building Your First Windows Application 21**

Creating a Windows Application 22

Deciding How Many Documents the  
Application Supports 23

Compound Document Support 25

Document Template Strings 26

Database Support 27

Specify User Interface Features 28

Advanced Features 29

Filenames and Classnames 30

Creating the Application 31

Try It Yourself 31

Creating a Dialog-Based Application 33

Creating DLLs, Console Applications, and  
More 37

Project Templates 37

Win32 Project 38

Changing Your MFC Application Wizard  
Decisions 39

Understanding the MFC Application  
Wizard's Code 39

A Single Document Interface  
Application 40

Other Files 44

Understanding a Multiple Document  
Interface Application 44

Understanding the Components of a  
Dialog-Based Application 46

From Here 48

**3 Interacting with Your Application 49**

Understanding Dialog Boxes 50

Creating a Dialog Resource 50

Defining Dialog Box and Control  
IDs 52

Creating the Sample Dialog Box 53

Writing a Dialog Class 54

Using the Dialog Class 55

Arranging to Display the Dialog  
Box 56

Entering Code 56

Behind the Scenes 58

Using a List Box Control 59

Using Radio Buttons 63

Understanding Message Routing 64

Understanding Message Loops 66

Reading Message Maps 68

Message Map Macros 69

How Message Maps Work 70

Polymorphism 70

Messages Caught by MFC Code 71

Learning How MFC Class Wizard

Helps You Catch Messages 72

The Class View Window 72

The Messages Button in the

Properties Window 73

Which Class Should Catch the  
Message? 74

Recognizing Messages 74

Understanding Commands 76

Understanding Command

Updates 77

Learning How Visual Studio Helps

You Catch Commands and Command

Updates 78

From Here 80

**4 Displaying Information 81**

Understanding the Document Class 82

CPoint 84

Understanding the View Class 84

Creating the Rectangles Application 86

Other View Classes 90

Document Templates, Views, and Frame  
Windows 92

Understanding Device Contexts 94

Introducing the Paint1 Application 95

Building the Paint1 Application 96

Painting in an MFC Program 96

Switching the Display 97

Using Fonts 99

Sizing and Positioning the Window 103

Using Pens 104

Using Brushes 106

Scrolling Windows 109

Building the Scroller Application 110

Adding Code to Increase Lines 112

Adding Code to Decrease Lines 113

From Here 115

**5 Printing and Saving 117**Understanding Basic Printing  
and Print Preview with MFC 118

Scaling 120

Printing Multiple Pages 122

Setting the Origin 127

MFC and Printing 128

Understanding Saving and  
Persistence 132

Examining the File Demo Application	132
A Review of Document Classes	132
Building the FileDemo Application	133
Creating a Persistent Class	138
The MultiString Application	139
Looking at the CMessages Class	139
Using the CMessages Class in the Program	142
Reading and Writing Files Directly	143
The CFile Class	144
Creating Your Own CArchive Objects	146
Using the Registry	147
How the Registry Is Set Up	147
The Predefined Keys	149
Using the Registry in an MFC Application	149
The Sample Applications	
Revisited	150
From Here	151
<b>6 Building a Complete Application:</b>	
<b>ShowString</b>	153
Building an Application That Displays a String	154
Creating an Empty Shell with AppWizard	154
Displaying a String	155
Building the ShowString Menus	157
Building the ShowString Dialog Boxes	161
ShowString's About Dialog Box	161
ShowString's Options Dialog Box	163
Making the Menu Work	164
The Dialog Class	164
Catching the Message	166
Making the Dialog Box Work	168
Adding Appearance Options to the Options Dialog Box	169
Changing the Options Dialog Box	169
Adding Member Variables to the Dialog Box Class	171
Adding Member Variables to the Document	172
Changing OnToolsOptions()	173
Changing OnDraw()	174
From Here	175
<b>7 Status Bars, Toolbars, and Common Controls</b>	177
Working with Toolbars	178
Deleting Toolbar Buttons	178
Adding Buttons to a Toolbar	180
The CToolBar Class's Member Functions	185
Working with Status Bars	186
Creating a New Command ID	188
Creating the Default String	189
Adding the ID to the Indicators Array	189
Creating the Pane's Command-Update Handler	190
Setting the Status Bar's Appearance	192
Working with Rebars	194
Common Controls	197
The Progress Bar Control	199
The Slider Control	202
Manipulating the Slider	203
The Up-Down Control	204
The Image List Control	206
Creating the Image List	207
The List View Control	208
Creating the List View's Columns	211
The Tree View Control	218
The Rich Edit Control	223

- Manipulating the Rich Edit Control 225
- IP Address Control 227
- The Date Picker Control 228
- Month Calendar Control 230
- Scrolling the View 230

From Here 232

## **8 Help, Property Pages, and Wizards 233**

Online Help 234

- Different Kinds of Help 234
  - Getting Help 234
  - Presenting Help 235
  - Using Help 236
  - Programming Help 236

Components of the Help System 237

Help Support from the Application Wizard 238

- Planning Your Help Approach 239
  - Planning Help for ShowString 240

Programming for Command Help 240

Programming for Context Help 242

- Writing Help Text 245
  - Changing Placeholder Strings 248
  - Adding Topics 248
  - Changing the How to Modify the Document Topic 254

- Adjustments to the Contents 254
  - Creating the Property Sheet Demo Application 255
  - Creating the Basic Files 256
  - Editing the Resources 256
  - Adding New Resources 258
  - Associating Your Resources with Classes 259
  - Creating a Property Sheet Class 260
  - Running the Property Sheet Demo Application 263

Adding Property Sheets to Your Applications 264

- Changing Property Sheets to Wizards 265
  - Running the Wizard Demo Application 266
  - Creating Wizard Pages 267
  - Displaying a Wizard 268
  - Setting the Wizard's Buttons 268
  - Responding to the Wizard's Buttons 269

From Here 270

## **9 Building COM+ Components with ATL 273**

- Fundamental COM Concepts 274
  - What Is COM? 274
  - What Is Automation? 275
  - What Are ActiveX Controls? 276
  - What Is DCOM? 277

- ATL, the Active Template Library 278
  - What's New in ATL for .NET? 279
  - A Sample ATL Component 279
  - Testing the Simple ATL Component 283
  - Debugging a COM Application 288

- The Plus in COM+ 289
  - Transactions 290
  - Role-Based Security 290
  - Resource Pooling 291
  - Object Pooling 291
  - Queued Components 292
  - Events 292

From Here 293

## **10 Internet Programming 295**

Using Windows Sockets 296

- Winsock in MFC 297
  - CAsyncSocket 297
  - CSocket 299

Using the Messaging API (MAPI) 300  
 What Is MAPI? 300

Adding MAPI Support to an  
 Application 301  
 Advanced Use of MAPI 303

Using Internet Server API (ISAPI)  
 Classes 305

Using the WinInet Classes 308  
 Designing the Internet Query  
 Application 310  
 Building the Query Dialog Box 311  
 Querying HTTP Sites 314  
 Querying FTP Sites 320

ATL Server 322  
 The ATL Server Project Wizard 322  
 Adding a Method to the Web  
 Service 325  
 Testing the ATL Server Web  
 Service 327

From Here 332

## 11 Database Programming 333

Windows Database Programming in Visual  
 C++ 334

Understanding Database Concepts 334  
 Using the Flat Database Model 334  
 Using the Relational Database  
 Model 335  
 Accessing a Database 336  
 The Visual C++ ODBC Classes 337

Creating an ODBC Database  
 Program 338

Registering the Database 338  
 Creating the Basic Employee  
 Application 340  
 Creating the Database Display 343  
 Adding and Deleting Records 346  
 Examining the OnRecordAdd()  
 Function 351  
 Examining the OnMove()  
 Function 351

Examining the OnRecordDelete()  
 Function 352

Sorting and Filtering 352  
 Adding Sorting and Filtering 352  
 Examining the OnSortDept()  
 Function 357  
 Examining the DoFilter()  
 Function 357

Choosing Between ODBC and ADO 358  
 Building the ADOEmployee  
 Example 359  
 Editing the Main Dialog Box 359  
 Adding ADO Code to Your Application  
 Shell 361

Understanding SQL 365  
 Working with SQL Databases  
 from C++ 366  
 Exploring the Sample Application 367  
 Working with Query Designer 375

Stored Procedures 376  
 Writing a New Stored Procedure 378  
 Connecting the Stored Procedure to  
 C++ Code 379  
 Database Diagrams 384

From Here 385

## 12 Improving Your Application's Performance 387

Preventing Errors with ASSERT and  
 TRACE 388  
 ASSERT: Detecting Logic Errors 388  
 TRACE: Isolating Problem Areas in  
 Your Program 389

Adding Debug-Only Features 390

Sealing Memory Leaks 392  
 Common Causes of Memory  
 Leaks 392  
 Debug new and delete 394  
 Automatic Pointers 395

Using Optimization to Make Efficient Code 396

From Here 398

### 13 Debugging 399

The Importance of Debugging 400

Debugging Vocabulary: Breakpoints and Related Concepts 400

Debugging Commands and Windows 401

Menu Items 401

Setting Breakpoints 402

Examining Variable Values 403

Stepping Through Code 406

Edit and Continue 407

Memory, Registers, and Disassembly 409

Using the ATL/MFC Trace Tool 410

Defining a Dump Member Function 411

An Example Using CDumpContext, CFile, and axfDump 412

Troubleshooting 412

From Here 415

### 14 Multitasking with Windows Threads 417

Understanding Simple Threads 418

Understanding Thread Communication 422

Communicating with Global Variables 422

Communicating with User-Defined Messages 424

Communicating with Event Objects 426

Using Thread Synchronization 429

Using Critical Sections 429

Using Mutexes 434

Using Semaphores 436

From Here 440

### 15 Special Win32 Application Types 441

Advanced Win32 Programming Topics 442

Creating Console Applications 442

Creating a Console Executable 442

Writing an Object-Oriented Console Application 445

Scaffolding to Test Algorithms 446

Creating and Using a 32-Bit Dynamic Link Library 447

Making a 32-Bit DLL 453

Using 32-Bit DLLs 456

Sending Messages and Commands 458

International Software Development Issues 460

Creating a Windows Service 461

From Here 469

### 16 The Common Language Runtime 471

Architecture of .NET 472

The System Namespace 473

The Core Classes 474

Classes for Standard Programming Tasks 476

Classes for Web Applications 477

Classes for Working with Data 479

Classes for Security 481

Tips for .NET-Friendly Code 481

Finding the Old Familiars 482

Input and Output 483

String Manipulation 483

Date and Time Work 484

From Here 485

### 17 Getting Started with .NET 487

Your First .NET Application 488

Your First .NET Component 490

Designing a Useful .NET  
Component 495

Implementing a Zip Code Format  
Checker 496

Implementing a Component Test  
Harness 498

Generalizing the Zip Code Format  
Checker 500

From Here 503

## 18 Integrating with Visual Basic 505

Using a C++ Component from Visual  
Basic 506

Extending a C++ Component in Visual  
Basic 510

Using a Visual Basic Component from  
Visual C++ 514

From Here 516

## 19 Integrating with C# 517

Using a C++ Component from C# 518

Using a C++ Component from an  
ASP.NET Page 521

Extending a C++ Component  
in C# 525

Using a C# Component from C++ 529

From Here 531

## 20 Managed and Unmanaged C++ 533

C++ Supports both Managed and  
Unmanaged Programming 534

What Is Managed Code? 534

Garbage Collection: Memory  
Management 535

A Pointer to a Managed Object Is  
Not a Pointer to an Unmanaged  
Object 536

Boxing a Classic Pointer 537

Pinning a Managed Pointer 537

Can All Classes Be Garbage-Collected  
Classes? 539

A Managed Class Cannot Inherit from an  
Unmanaged Class 539

Garbage-Collected Classes Cannot Use  
Multiple Inheritance 540

Additional Restrictions on Managed and  
Garbage-Collected Classes 540

Value Types 541

Managed Interfaces 542

Declaring a Managed Interface 542

Inheriting from a Managed  
Interface 544

Properties 547

Mixing Managed and Unmanaged  
Code 548

Activating .NET Support 548

Identifying Unmanaged Code 549

From Here 550

## 21 Creating an XML Web Service 551

XML Web Service 552

What Should an XML Web Service  
Offer? 552

Designing the Sample Web Service 553

Implementing the Sample Web  
Service 553

Testing the Sample Web Service 557

Web Services Description  
Language 558

Consuming a Web Service from Code 563

DISCO and UDDI 567

From Here 567

## 22 Database Access with ADO.NET 569

Getting Started with ADO.NET 570

A Data Access Component 570

Creating the Skeleton of the Class 571  
 Coding RetrieveData() 571  
 Retrieving Data 572  
 Building the ASP.NET Page 573  
 Adding Script to the Page 575  
 Testing the ASP.NET Page 576  
 Filtering on Employee Name 577

Using a DataRelation 578  
 Creating the Project 578  
 Open a Connection to the Database 579  
 Create and Fill DataSet and DataTable Objects 580  
 Create Relations 580  
 Close the Connection 581  
 Prompt for a User 581  
 Use Relations to Find a Manager 582  
 Write Out the Manager's Name 582

Getting XML from a Database 583

Filling a Database from XML 585

From Here 587

## 23 COM Interop 589

Using a COM Component from a .NET Application 590

Extending a COM Component in .NET 593

Using a .NET Object As a COM Component 596

From Here 600

## 24 Security and Policies 601

Making Applications More Secure 602

The .NET Security Model Is Consistent 602

Code Access Permissions 602  
 Permission Sets and Code Groups 603

How to Run a .NET Application Over a Network Share 604

Isolated and Shared Assemblies 606

DLL Hell 606

The Global Assembly Cache 607

Strongly Named Assemblies 608

Creating a Strong Name for an Assembly 609

Using an Assembly from the Global Assembly Cache 610

User-Based and Role-Based Security 610

Security from the Compiler 612

From Here 612

## A Windows Programming Review and a Look Inside CWnd 615

Programming for Windows 616

A C-Style Window Class 616

Window Creation 617

Encapsulating the Windows API 620

Inside CWnd 621

Getting a Handle on All These MFC Classes 623

CObject 623

CCmdTarget 624

CWnd 624

All Those Other Classes 625

## B XML Review 627

What Is XML? 628

Creating, Editing, and Checking XML 629

Working with XML in .NET 631

Working with XML in a Win32 Application 632

Defining Data Structure 633

Visual Studio Support for DTDs and Schemas 639

Generating Schemas with Visual Studio 639  
 Schema-Aware Editing with Visual Studio 640

What Can XML Be Used For? 643  
 Exchanging Information Between Companies 643  
 Keeping Configuration Information in a File 644  
 Passing Information Between Tiers 644  
 Exchanging Information Between Platforms 646  
 Exchanging Information Between Applications 646

What Is XSLT? 646  
 Transforming XML to XML 647  
 Transforming XML to XHTML 649

What Is XSL? 651

What Does the Future Hold for XML and Related Technologies? 651

## **C The Visual Studio User Interface, Menus, and Visual Studio 653**

Visual Studio: An Integrated Development Environment 654

Choosing a View 655

Looking at Interface Elements 657  
 Accelerators 658  
 Dialog Boxes 658  
 Icons 659  
 Menus 659  
 The String Table 661  
 Toolbars 662  
 Version Information 662

Looking at Your Code, Arranged by Class 663

Looking at Your Code, Arranged by File 667

Other Useful Windows 668

Editing Your Code 670  
 Basic Typing and Editing 670  
 Outlining 671  
 Working with Blocks of Text 672  
 Syntax Coloring 673  
 Shortcut Menu 674

Learning the Menu System 675  
 Using the File Menu 676  
 Edit 680  
 Using the View Menu 690  
 Project 696  
 Build 702  
 Debug 704  
 Tools 706  
 Window 712

Help 713  
 Dynamic Help 714  
 Contents 714  
 Index 714  
 Search 714  
 Index Results 714  
 Search Results 714  
 Edit Filters 714  
 Previous topic 715  
 Next topic 715  
 Sync Contents 715  
 Show Start Page 715  
 Check for Updates 715  
 Technical Support 715  
 Help on Help 715

Toolbars 715  
 Standard Toolbar 717  
 Using Other Toolbars 717

## **D Upgrading from Visual C++ 6 719**

Making Visual Studio .NET Resemble Visual C++ 6 720

Terminology 722

Visual Changes	722
Tabbed Windows	722
Help	725
Outlining	725
Start Page	726
Finding Familiar Commands	728
Start	728
Project Settings	728
What Happened to ClassView?	730
Macros and Constants	730
Bases and Interfaces	730
Maps	732
Enumerations	732
Sorting the Class View Window	733
Where Is ClassWizard?	734
Is This Visual Basic?	735
Break on Exceptions	735
Reverse Engineer	736
ClassBar	736
