

PRINCIPLES OF
FRACTURE
MECHANICS

R. J. Sanford

Contents

Preface vii

1	Introduction to Fracture Mechanics	1
1.1	Historical Overview of Brittle Fracture	1
1.2	Elementary Brittle-Fracture Theories	7
1.3	Crack Extension Behavior	10
1.4	Summary	14
	<i>References</i>	14
	<i>Exercises</i>	15
2	Elements of Solid Mechanics	16
2.1	Concepts of Stress and Strain	16
2.2	Equations of Elasticity in Cartesian Coordinates	24
2.3	Equations of Elasticity in Polar Coordinates	33
2.4	Solution of the Biharmonic Equation	35
2.5	The Problem of the Elliptical Hole	41
	<i>References</i>	48
	<i>Exercises</i>	49
3	Elasticity of Singular Stress Fields	51
3.1	Overview	51
3.2	The Williams Problems	52
3.3	The Generalized Westergaard Approach	60
3.4	The Central Crack Problem	66
3.5	Single-Ended Crack Problems	71
3.6	The Effect of Finite Boundaries	77
3.7	Determining the Geometric Stress Intensity Factor	82
3.8	The Three-Dimensional Crack Problem	96
	<i>References</i>	109
	<i>Exercises</i>	111
4	Numerical Methods for K Determination	116
4.1	Introduction	116
4.2	Boundary Collocation	119
4.3	The Finite Element Method	141
	<i>References</i>	154
	<i>Exercises</i>	156

5	Experimental Methods for K Determination	159
5.1	Overview	159
5.2	Classical Photoelastic Methods	161
5.3	The Method of Caustics	168
5.4	Strain Gages	175
5.5	Multi-Parameter Full-Field Methods: Local Collocation	182
5.6	Interference Patterns	183
5.7	Moire Patterns	185
5.8	Photoelasticity	187
	<i>References</i>	192
	<i>Exercises</i>	193
6	A Stress-Field Theory of Fracture	197
6.1	The Critical Stress-State Criterion	197
6.2	Crack-Tip Plasticity	210
6.3	The Effect of Variables on Fracture Toughness	221
6.4	R -Curves	230
	<i>References</i>	233
	<i>Exercises</i>	234
7	The Energy of Fracture	236
7.1	Introduction	236
7.2	Griffith's Theory of Brittle Fracture	238
7.3	A Unified Theory of Fracture	240
7.4	Compliance	243
	<i>References</i>	248
	<i>Exercises</i>	249
8	Fracture-Toughness Testing	251
8.1	Introduction	251
8.2	Fracture Toughness Standards	252
8.3	Nonstandard Fracture-Toughness Tests	265
8.4	Summary	276
	<i>References</i>	277
	<i>Exercises</i>	279
9	Fatigue	282
9.1	Introduction	282
9.2	Stages of Fatigue Crack Growth	284
9.3	Mathematical Analysis of Stage II Crack Growth	291
9.4	The Effects of Residual Stress on Crack Growth Rates	300
9.5	Life-Prediction Computer Programs	306

- 9.6 Measuring Fatigue Properties: ASTM E 647 312
References 316
Exercises 318

10 Designing Against Fracture 321

- 10.1 Introduction 321
 10.2 Fracture Mechanics in Conventional Design 322
 10.3 The Role of NDE in Design 325
 10.4 U.S. Air Force Damage-Tolerant Design Methodology 327
 10.5 Designing by Hindsight: Case Studies 333
References 335
Exercises 336

11 Elastoplastic Fracture 338

- 11.1 Introduction 338
 11.2 Nonlinear Elastic Behavior 339
 11.3 Characterizing Elastoplastic Behavior 343
 11.4 Comments on the J -Integral in Elastoplastic Fracture Mechanics 351
References 354
Exercises 355

A COMPREHENSIVE EXERCISES 356

- A.1 General Comments 356
Exercises 356

B COMPLEX-VARIABLE METHOD IN ELASTICITY 361

- B.1 Complex Numbers 361
 B.2 Complex Functions 365
References 369
Exercises 369

C AN ABBREVIATED COMPENDIUM OF WESTERGAARD STRESS FUNCTIONS 370

References 370

D FRACTURE PROPERTIES OF ENGINEERING MATERIALS 379

E NASGRO 3.0 MATERIAL CONSTANTS FOR SELECTED MATERIALS 392

Author Index 400

Subject Index 402
