

MODERN CONTROL ENGINEERING

P. N. Paraskevopoulos

Contents

<i>Series Introduction</i>	v
<i>Preface</i>	vii

Part I Classical Control

1. Introduction to Automatic Control Systems	1
2. Mathematical Background	27
3. Mathematical Models of Systems	67
4. Classical Time-Domain Analysis of Control Systems	147
5. State-Space Analysis of Control Systems	193
6. Stability	237
7. The Root Locus Method	271
8. Frequency Domain Analysis	305
9. Classical Control Design Methods	367

Part II Modern Control

10. State-Space Design Methods	435
11. Optimal Control	479
12. Digital Control	515
13. System Identification	583

14. Adaptive Control	603
15. Robust Control	637
16. Fuzzy Control	673
<i>Appendix A: Laplace Transform Tables</i>	<i>701</i>
<i>Appendix B: The Z-Transform</i>	<i>707</i>
<i>Appendix C: Z-Transform Tables</i>	<i>723</i>
<i>Index</i>	<i>729</i>
