# Contents

|   |            |
|---|------------|
| <i>Preface</i>                                      | <i>iii</i> |
| 1. Introduction                                     | 1          |
| 2. Modeling Dynamic Systems                         | 17         |
| 3. Analysis Methods for Dynamic Systems             | 75         |
| 4. Analog Control System Performance                | 141        |
| 5. Analog Control System Design                     | 199        |
| 6. Analog Control System Components                 | 279        |
| 7. Digital Control Systems                          | 311        |
| 8. Digital Control System Performance               | 343        |
| 9. Digital Control System Design                    | 365        |
| 10. Digital Control System Components               | 399        |
| 11. Advanced Design Techniques and Controllers      | 433        |
| 12. Applied Control Methods for Fluid Power Systems | 495        |
| <br>  |            |
| <i>Appendix A: Useful Mathematical Formulas</i>     | 567        |
| <i>Appendix B: Laplace Transform Table</i>          | 569        |
| <i>Appendix C: General Matlab Commands</i>          | 571        |
| <i>Bibliography</i>                                 | 575        |
| <i>Answers to Selected Problems</i>                 | 579        |
| <i>Index</i>  | 585        |
