

The background of the cover is dark with a pattern of glowing blue binary code (0s and 1s) scattered across it. A prominent, bright blue horizontal light streak or lens flare effect cuts across the middle of the image, adding a sense of motion and technology.

Computer Communications and Networking Technologies

Michael A. Gallo

William M. Hancock

Contents

I	COMPUTER COMMUNICATIONS AND NETWORK BASICS	1
1	Overview of Computer Communications and Networking	2
1.1	What Does Computer Communications and Networking Technologies Mean?	3
1.2	What Is a Computer Network?	4
	<i>Network Members: Devices, Nodes, and Hosts</i>	<i>4</i>
	<i>Network Media and Communication Protocols</i>	<i>5</i>
1.3	Types of Computer Networks	7
	<i>Classifying Networks by the Area They Encompass</i>	<i>7</i>
	<i>Classifying Networks by Their Topology</i>	<i>9</i>
	<i>Switched Networks</i>	<i>14</i>
1.4	Network Addressing, Routing, Reliability, Interoperability, and Security	16
	<i>Addressing</i>	<i>16</i>
	<i>Routing</i>	<i>17</i>
	<i>Reliability</i>	<i>17</i>
	<i>Interoperability</i>	<i>18</i>
	<i>Security</i>	<i>18</i>
1.5	Network Standards	19
	<i>De Jure Standards</i>	<i>20</i>
	<i>De Facto Standards</i>	<i>20</i>

	<i>Proprietary Standards</i>	21
	<i>Consortia Standards</i>	21
	<i>Internet Standards Development</i>	22
1.6	The Telephone System and Data Communications	23
	<i>The Invention of the Telephone</i>	23
	<i>The Evolution of the Telephone Industry and AT&T</i>	24
	<i>The AT&T Breakup of 1984</i>	25
	<i>The Telecommunications Act of 1996</i>	26
	<i>Data Communications versus Telecommunications</i>	27
1.7	Organization of the Book	28
	End-of-Chapter Commentary	29
	Chapter Review Materials	30

2

Essential Terms and Concepts 33

2.1	Network Applications and Application Protocols	34
2.2	Computer Communications and Networking Models	37
	<i>Decentralized Systems</i>	37
	<i>Centralized Systems</i>	38
	<i>Distributed Systems</i>	38
	<i>Client/Server Model</i>	40
	<i>Peer-to-Peer Model</i>	41
	<i>Web-Based Model</i>	43
	<i>Emerging File-Sharing Model: Servant</i>	44
2.3	Communication Service Methods and Data Transmission Modes	45
	<i>Serial and Parallel Communications</i>	45
	<i>Synchronous, Asynchronous, and Isochronous Communications</i>	46
	<i>Simplex and Duplex Communications</i>	48
2.4	Analog and Digital Communications	49
	<i>Analog Communications</i>	49
	<i>Digital Communications</i>	51
2.5	Speed and Capacity of a Communications Channel	54
	<i>Bandwidth and Data Rate</i>	54
	<i>Throughput</i>	55
	<i>Noise</i>	55
2.6	Multiplexing and Switching	59
	<i>Multiplexing</i>	59
	<i>Switching</i>	62

2.7 Network Architecture and the OSI Reference Model 65*The OSI Model 65**OSI Service Types 67**OSI Today 70***End-of-Chapter Commentary 71****Chapter Review Materials 72****3****Analog and Digital Communications Concepts 76****3.1 Representing Data as Analog Signals 77***Converting Analog Data to Analog Signals 77**Converting Digital Data to Analog Signals 79***3.2 Representing Data as Digital Signals 87***Converting Analog Data to Digital Signals 87**Converting Digital Data to Digital Signals 90***3.3 Data Rate and Baud Rate Redux 92****3.4 Digital Carrier Systems 93***T1 and DS Circuits 93**Fractional T1 95**SONET and OC Circuits 98***End-of-Chapter Commentary 100****Chapter Review Materials 100****II****Physical, Data Link, and Network Layer Concepts 107****4****Physical Layer Concepts 108****4.1 What Is the Physical Layer? 109****4.2 The Physical and Electrical Characteristics of Wire 110***Physical Characteristics 111**Electrical Characteristics 114***4.3 Copper Media 116***Unshielded and Shielded Twisted-Pair Cable 116**IBM Cable 118**Coaxial Cable 119**Twin Axial Cable 120*

5

Data Link Layer Concepts and IEEE LAN Standards 139

- 5.1 What Is the Data Link Layer? 140**
 - Overview 140*
 - The IEEE and the Data Link Layer 141*
- 5.2 The Logical Link Control (LLC) Sublayer 142**
 - Framing 142*
 - Flow Control 146*
 - Error Control 152*
- 5.3 The Media Access Control (MAC) Sublayer 158**
 - Random Access Protocols 158*
 - Token Passing Protocols 161*
 - Random Access versus Token Passing Protocols 162*
- 5.4 Data Prioritization and Quality of Service 163**
- End-of-Chapter Commentary 166**
- Chapter Review Materials 166**

6

Network Hardware Components (Layers 1 and 2) 170

- 6.1 What Are Connectors? 171**
 - Overview 171*
 - UTP Cable Connectors 171*
 - Coaxial Cable Connectors 172*
 - Fiber-Optic Cable Connectors 173*
 - Other Connectors 173*
- 6.2 Transceivers and Media Converters 174**
 - Transceivers 174*
 - Media Converters 176*

- 6.3 Repeaters 177**
 - Repeaters versus Hubs 177*
- 6.4 Network Interface Cards and PC Cards 179**
 - Network Interface Cards 179*
 - PC Cards 181*
- 6.5 Bridges 182**
 - Overview 182*
 - Bridge Standards 183*
 - Bridges versus Repeaters 187*
- 6.6 Switches 188**
 - Store-and-Forward Switch 188*
 - Cut-Through Switch 189*
 - Hybrid Switch 190*
 - Switch Performance 190*
- End-of-Chapter Commentary 192**
- Chapter Review Materials 192**

7

Internetworking and Network Layer Concepts and Components 195

- 7.1 Internetworking Concepts 196**
- 7.2 The Network Layer and Routing Concepts 200**
 - Network Layer Overview 200*
 - Routing Protocol Concepts 202*
 - Routing Algorithms 205*
- 7.3 Sample Routing Protocols 208**
 - Autonomous Systems and Interior and Border Gateway Protocols 208*
 - RIP 208*
 - RIP-2 211*
 - OSPF 212*
 - Other Routing Protocols 214*
 - Classless Interdomain Routing 215*
- 7.4 Routers and Switches 215**
 - Overview (Review) of Switches and Switching 215*
 - Layer-2 and Layer-3 Switches versus Routers 216*
 - Layer-4 Switching 217*
 - IP Switching 217*
 - Brouter versus Router 218*

7.5 Virtual Private Networks (VPNs) 218

VPN Strategies 218

VPN Benefits 221

The Internet and TCP/IP 229

8.1 What Is the Internet? 230

8.2 Internet History 231

ARPANET 231

BITNET, CSNET, and UUCP 231

NSFNET 233

A Commercial Internet 236

The Current Public Internet 237

Other Internet Backbone Initiatives 238

8.3 Internet Administration 240

Governance and Organization 240

Standards Development 241

Internet Security 242

8.4 What Is TCP/IP? 243

A Brief History 243

The TCP/IP Model versus the OSI Model 245

8.5 TCP/IP's Transport and Network Layer Protocols 248

*Overview of Internet-Based Communications
and the Role of UDP, TCP, IP, and Port Numbers 248*

The User Datagram Protocol (UDP) 249

The Transport Control Protocol (TCP) 252

The Internet Protocol (IP) 260

8.6 IP Addresses 263

IPv4 263

Subnetting IPv4 Addresses 265

IP Address Resolutions: DNS 270

IP Address and Name Assignment 273

8.7 IPv6 274

The Need for IPv6 274

IPv6 versus IPv4 275

IPv6 Addresses 278

IPv6 Migration 280

8.8 TCP/IP Application Level Protocols 281*Electronic Mail: SMTP, MIME, and POP 281**The TELNET Protocol 291**The File Transfer Protocol (FTP) 293**The Hypertext Transfer Protocol (HTTP) 295***End-of-Chapter Commentary 304****Chapter Review Materials 304****III****Local and Wide Area Networking Technologies 311****9****Ethernet and IEEE 802.3 Networks 312****9.1 The History of Ethernet 313***In the Beginning 313**Ethernet versus IEEE 802.3 314***9.2 10-MBPS Ethernet / 802.3 LANS 316***Physical and Data Link Layer Information 316**The Concept of Network Diameter and Collision Domain 321**The 5-4-3 Repeater Placement Rule 324**Workarounds to the 5-4-3 Repeater Placement Rule 325**Performance Issues 326***9.3 Switched Ethernet, Full-Duplex Ethernet, and Virtual LANs 328***The Concept of Segmentation 328**Switched Ethernet 330**Full-Duplex Ethernet 335**Virtual Local Area Networks (VLANs) 336***9.4 100-MBPS Ethernet LANs 337***Fast Ethernet 338**100VG-AnyLAN 342***9.5 Gigabit Ethernet 346***Overview 346**IEEE 802.3z: Gigabit Ethernet over Fiber 348**IEEE 802.3ab: Gigabit Ethernet over Copper 350**Gigabit Ethernet versus Asynchronous Transfer Mode (ATM) 351**Gigabit Ethernet's Bottom Line 352**Is Faster Better? 353**Ethernet as a WAN Protocol: IEEE 802.3ae—10-Gigabit Ethernet 353*

9.6 Other Ethernet-Related Projects 354

End-of-Chapter Commentary 355

Chapter Review Materials 355

10

Token Ring 361

10.1 What Is Token Ring? 362

10.2 Physical Layer Specifications 364

10.3 Frame Formats 365

The Token Frame 365

The Data Frame 366

10.4 Priority and Reservation 368

10.5 Monitor Stations 369

10.6 Second-Generation Token Ring 370

Switched Token Ring 370

Dedicated Token Ring 372

Full-Duplex Token Ring 373

High-Speed Token Ring 373

10.7 Token Ring versus Token Bus 374

End-of-Chapter Commentary 375

Chapter Review Materials 375

11

Fiber Distributed Data Interface (FDDI) 378

11.1 What Is FDDI? 379

11.2 Physical Layer Specifications 381

11.3 Frame Formats and Medium Access Specifications 382

Frame Formats 382

MAC Sublayer: FDDI versus Token Ring 384

Operation 385

11.4 Configuration and Design Issues 386

11.5 Interconnecting FDDI with Ethernet/802.3 or ATM Networks 388

11.6 The Future of FDDI 390

End-of-Chapter Commentary 390

Chapter Review Materials 391

12**Integrated Services Digital Network (ISDN) 393**

12.1 What Is ISDN? 394*History 394**Standards 396***12.2 ISDN Components 398***Modules, Equipment, and Adapters 398**Interfaces 399***12.3 ISDN Channel Types 400***B Channel 401**D Channel 401**H Channel 402***12.4 Basic and Primary Rate Interfaces 402***Basic Rate Interface (BRI) 402**Primary Rate Interface (PRI) 403***12.5 ISDN Protocols 404***Overview 404**Link Access Protocol-D Channel (LAP-D) 405***12.6 ISDN Features, Services, and Applications 406***Service Profile Identification (SPID) Numbers 406**Line and Feature Sets 406**Teleservices 407**ISDN versus Regular Phone Service 407**ISDN and the Internet 408**LAN-to-LAN Connections 409***12.7 Other ISDN Initiatives 410***Always On/Dynamic ISDN 410**Broadband ISDN 411***End-of-Chapter Commentary 411****Chapter Review Materials 412****13****Frame Relay 416**

13.1 What Is Frame Relay? 417**13.2 Frame Relay Circuits 420***Permanent Virtual Circuit (PVC) 420**Committed Information Rate (CIR) 422*

CIR and Oversubscription 423
Switched Virtual Circuit (SVC) 426

13.3 Technical Overview and Data Link Layer Issues 427

Basic Operation 427
Frame Relay Frames 428
Data Link Connection Identifier (DLCI) 430
Congestion Control and Management 432
Link Management 434

13.4 Additional Frame Relay Information 434

Voice Over Frame Relay 434
Frame Relay versus Other LAN-to-LAN Technologies 436
Frame Relay in the News 436

End-of-Chapter Commentary 437

Chapter Review Materials 437

14

Switched Multimegabit Data Service (SMDS) 441

14.1 What Is SMDS? 442

Overview 442
History 443
Development Rationale 443

14.2 SMDS Technical Overview 444

Physical Layer Specifications 444
Data Link Layer Specifications: DQDB 446

14.3 The SMDS Interface Protocol (SIP) 447

14.4 SMDS Addressing 451

14.5 SMDS versus Other LAN-to-LAN Technologies 452

SMDS versus Frame Relay and ATM 452

14.6 Status of SMDS Today 453

End-of-Chapter Commentary 455

Chapter Review Materials 455

15

Asynchronous Transfer Mode (ATM) 458

15.1 What Is ATM? 459

Overview 459
History 459

- 15.2 General Concepts and Operation 461**
 - General Concepts 461*
 - Operation 461*
- 15.3 ATM Interface Standards 463**
- 15.4 ATM Cells, Virtual Connections, and Addressing 465**
 - ATM Cells 465*
 - Virtual Connections 467*
 - Addressing 469*
- 15.5 ATM Adaptation Layer (AAL) 470**
- 15.6 ATM and Convergence Technology 472**
- 15.7 ATM versus Other Technologies and Services 473**
 - ATM versus Fast and Gigabit Ethernet 473*
 - ATM versus Frame Relay 474*
 - ATM versus SONET 475*
 - ATM as an Emulated LAN Technology 475*
