

# **A Course in Ordinary Differential Equations**

B. Rai

D. P. Choudhury

H.I. Freedman

# Contents

<i>Preface</i>	vii
<b>Chapter 1. Introduction and Basic Concepts</b>	<b>1</b>
1.1 Basic concepts	1
1.2 Families of curves	5
1.3 Isoclines	7
1.4 Equations and differentials	9
<b>Chapter 2. Solvable First Order Equations</b>	<b>12</b>
2.1 Separation of variables	12
2.2 Equations with homogeneous coefficients	16
2.3 Equations reducible to the homogeneous coefficients cases	20
2.4 Exact differential equations	22
2.5 Equations reducible to the exact equation	26
2.6 Linear equations of first order	34
2.7 Equations reducible to the linear case: Bernoulli's equation	37
2.8 Linearly separable equations	39
2.9 First order equations of higher degree solvable for the derivative	41
2.10 Equations solvable for $y$ or $x$	44
<b>Chapter 3. Applications of First Order Equations</b>	<b>50</b>
3.1 Radioactive decay	50
3.2 Cooling problems	52
3.3 Electric circuits	54
3.4 Logistic population growth	59
3.5 Chemical reactions	60
3.6 Orthogonal trajectories	65
<b>Chapter 4. Theoretical Considerations</b>	<b>70</b>
4.1 Picard's method of successive approximations	70
4.2 Existence and uniqueness of solutions	74
4.3 Singular solutions	84

<b>Chapter 5. Linear Differential Equations I</b>	<b>100</b>
5.1 Introduction	100
5.2 Linearly dependent and independent functions	103
5.3 Second order linear equations: general theory	105
5.4 Homogeneous linear equations of second order with constant coefficients	111
5.5 Nonhomogeneous linear differential equations of second order: method of variation of parameters	116
5.6 The method of undetermined coefficients	122
5.7 Reduction of order	126
5.8 Applications to oscillation problems	131
<b>Chapter 6. Linear Differential Equations II</b>	<b>149</b>
6.1 Homogeneous linear equations of arbitrary order	149
6.2 Nonhomogeneous linear differential equations of arbitrary order	156
6.3 Homogeneous linear equations of arbitrary order with constant coefficients	160
6.4 Nonhomogeneous equations with constant coefficients: method of undetermined multipliers	168
6.5 The inverse operator method for particular solutions	176
6.6 Euler-Cauchy equations	197
6.7 Reduction of order of linear differential equations	201
<b>Chapter 7. Systems of Differential Equations</b>	<b>208</b>
7.1 Introduction	208
7.2 Motivational examples	209
7.2.1 Coupled <i>L-R</i> electric circuits	209
7.2.2 Coupled systems of springs	210
7.2.3 Motion of a particle under a variable force field	211
7.2.4 Kinetics of consecutive chemical reactions	212
7.3 Coupled linear equations with constant coefficients: method of elimination	213
7.4 Existence and uniqueness of solutions for systems of equations	221
7.5 Equations of higher order	242
7.6 Linear systems	251
7.7 Linear systems with constant coefficients	264
<b>Chapter 8. Laplace Transforms</b>	<b>281</b>
8.1 Definitions and properties	281
8.2 When does the Laplace transform exist?	285
8.3 Transforms of derivatives and integrals	291
8.4 Derivatives and integrals of transforms	296
8.5 The inverse Laplace transform	300

- 8.6 Exponential shifts 308
- 8.7 Convolutions 315
- 8.8 Applications to initial value problems 321

**Chapter 9. Power Series Methods 332**

- 9.1 Introduction 332
- 9.2 Solutions near an ordinary point 338
- 9.3 Solutions near a regular singular point: The method of Frobenius and the indicial equation 346
- 9.4 Regular solutions near a regular singular point 350
- 9.5 Logarithmic solutions near a regular singular point 355
- 9.6 Legendre's equation 366
- 9.7 Bessel's equation 380
- 9.8 Theoretical justification for the power series method 408

**Chapter 10. Numerical Methods 416**

- 10.1 Incremental methods 416
- 10.2 Runge-Kutta methods 424
- 10.3 Second order equations 430
- 10.4 Predictor-corrector methods 434

*Answers to Selected Exercises* 443

*Bibliography* 458

*Index* 459
