<i>Foreword</i>	v
<i>Preface</i>	vii
<i>About the Cover Illustration</i>	ix
<i>Contributors</i>	xvii
<i>Introduction</i>	xix
1. History and Basic Biology	1
1.1 Brief History of Sugar and Sugar-producing Plants (<i>E. Biancardi</i>)	1
1.2 Brief History of Sugar Beet Cultivation (<i>E. Biancardi</i>)	3
1.3 Anatomy and Physiology (<i>K. Klotz</i>)	9
1.3.1 Vegetative Growth	9
1.3.1.1 Seed germination and early plant development	9
1.3.1.2 Shoot morphology and development	11
1.3.1.3 Root morphology and development	11
1.3.2 Reproductive Growth	14
1.3.2.1 Transition to reproductive growth	14
1.3.2.2 Reproductive growth and floral anatomy	15
1.3.2.3 Fertilization	17
1.3.2.4 Seed morphology and development	18
1.4 Cytology and Cytogenetics (<i>G.N. Skaracis</i>)	19
1.4.1 Chromosome Morphology and Structure	19
1.4.2 Meiotic Course	20
1.4.2.1 Haploids	20
1.4.2.2 Diploids	20
1.4.2.3 Triploids	21
1.4.2.4 Tetraploids	21
1.4.2.5 Meiosis in related <i>Beta</i> species	22

1.4.3	Primary Trisomics	23
1.4.4	Identification of Alien Chromosomal Additions	24
1.5	Sources of Genetic Variation, Genus <i>Beta</i> (<i>B. Ford-Lloyd</i>)	25
1.5.1	Early Descriptions of Beet	25
1.5.2	Classification History	26
1.5.3	New Classification for Section <i>Beta</i>	29
1.5.4	The Future of <i>Beta</i> Classification using DNA	31
1.6	Plant Introduction and Genetic Diversity (<i>L. Panella and R. T. Lewellen</i>)	34
1.7	History of Sugar Beet Breeding (<i>E. Biancardi</i>)	38
	<i>References</i>	40
2.	Objectives of Sugar Beet Breeding	53
2.1	Introduction (<i>E. Biancardi</i>)	53
2.2	Polyploidy (<i>G.N. Skaracis and E. Biancardi</i>)	58
2.3	Monogerm Seed (<i>E. Biancardi and G.N. Skaracis</i>)	60
2.4	Male Sterility (<i>G.N. Skaracis and E. Biancardi</i>)	61
2.5	Annual and Biennial Growth Habit, Bolting Resistance (<i>G. Steinrücken</i>)	62
2.5.1	Annual Growth Habit	62
2.5.2	Biennial Growth Habit	63
2.5.3	Bolting and Flowering Regulation	63
2.5.4	Major Flowering Pathways	64
2.5.5	Flowering Traits in Breeding	66
2.5.6	Breeding for Bolting Resistance	66
2.6	Self-sterility and Self-incompatibility (<i>M. De Biaggi</i>)	67
2.6.1	Self-incompatibility	67
2.6.2	Self-fertility	69
2.7	Seed Quality (<i>E. Biancardi and M. De Biaggi</i>)	69
2.8	Root, Hypocotyl, and Leaf Color (<i>E. Biancardi</i>)	71
2.9	Morphological and Physiological Traits (<i>E. Biancardi</i>)	72
2.10	Resistance to Parasites	74
2.10.1	Introduction (<i>E. Biancardi</i>)	74
2.10.2	Viruses	74
2.10.2.1	Curly top (<i>L. Panella</i>)	74
2.10.2.2	Beet yellows (<i>M. De Biaggi</i>)	76
2.10.2.3	Beet mosaic (<i>R. T. Lewellen and E. Biancardi</i>)	79

2.10.2.4	Rhizomania (<i>M. De Biaggi</i>)	80
2.10.2.5	Beet soilborne virus (<i>M. De Biaggi</i>)	85
2.10.3	Bacteria	86
2.10.3.1	Bacterial vascular necrosis and rot (<i>L.G. Campbell</i>)	86
2.10.3.2	Yellow wilt (<i>R.T. Lewellen and E. Biancardi</i>)	87
2.10.4	Fungi	88
2.10.4.1	Cercospora leaf spot (<i>G.N. Skaracis and E. Biancardi</i>)	88
2.10.4.2	Powdery mildew (<i>L.G. Campbell</i>)	90
2.10.4.3	Downy mildew (<i>E. Biancardi and R.T. Lewellen</i>)	92
2.10.4.4	Fusarium yellows (<i>L. Panella and R.T. Lewellen</i>)	93
2.10.4.5	Root rots (<i>L. Panella</i>)	95
2.10.4.6	Southern sclerotium root rot (<i>R.T. Lewellen and E. Biancardi</i>)	100
2.10.4.7	<i>Polymyxa betae</i> (<i>E. Biancardi</i>)	100
2.10.4.8	Black root (<i>L. Panella</i>)	101
2.10.4.9	Minor fungal diseases (<i>E. Biancardi</i>)	102
2.10.5	Nematodes	103
2.10.5.1	Cyst nematode (<i>M.H. Yu</i>)	103
2.10.5.2	Root-knot nematode (<i>M.H. Yu</i>)	109
2.10.6	Insects and Mites	111
2.10.6.1	Aphids (<i>L.G. Campbell</i>)	111
2.10.6.2	Spinach leaf miner (<i>E. Biancardi</i>)	113
2.10.6.3	Sugar beet root maggot (<i>L.G. Campbell</i>)	113
2.10.6.4	Flea beetle (<i>E. Biancardi</i>)	114
2.10.6.5	Spider mite (<i>E. Biancardi</i>)	115
2.10.7	Multiple Disease Resistance (<i>E. Biancardi</i>)	115
2.11	Resistance to Abiotic Stresses (<i>P. Stevanato</i>)	116
2.11.1	Cold Stress	116
2.11.2	Heat and UV Stresses	118
2.11.3	Water Stress	118
2.12	Sugar Content, Root Weight, and Sugar Yield (<i>M. McGrath</i>)	119
2.13	Ethanol Production (<i>E. Biancardi</i>)	122

2.14	Postharvest Storage Traits (<i>L.G. Campbell</i>)	122
2.15	Processing Quality (<i>L.G. Campbell</i>)	126
	<i>References</i>	129
3.	Conventional Breeding Methods	169
3.1	Selection Methods (<i>M. De Biaggi and G.N. Skaracis</i>)	169
3.1.1	Mass Selection	169
3.1.2	Progeny Selection and Line Breeding	172
3.1.2.1	Half-sib selection	174
3.1.2.2	Full-sib selection	175
3.1.2.3	Progeny selection using clones	178
3.1.3	Recurrent Selection	180
3.1.4	Inbreeding and Heterosis	184
3.1.5	Interspecific Hybridization	188
3.1.6	Mutagenesis	191
3.2	Production of Commercial Varieties (<i>G.N. Skaracis and M. De Biaggi</i>)	191
3.2.1	Introduction	191
3.2.2	Open-pollinated, Synthetic, and Anisoploid Varieties	
3.2.3	Monogerm Hybrid Varieties	195
3.2.3.1	Development of CMS seed parents	195
3.2.3.2	Development of pollinators	199
3.2.3.3	Synthesis of hybrid varieties	200
3.2.4	Maintenance of Parental Lines	205
3.2.5	Winter Varieties	205
3.3	Field Evaluation and Registration (<i>E. Biancardi and M. De Biaggi</i>)	207
3.3.1	Field Evaluation	207
3.3.2	Variety Registration and International Regulations	211
	<i>References</i>	213
4.	Molecular Biology and Biotechnology	221
4.1	Genomics in Genetic Improvement (<i>M. McGrath</i>)	221
4.1.1	Introduction	221
4.1.2	Genome Organization of the Nucleus (Structural Genomics)	222
4.1.3	Genomes of Chloroplasts and Mitochondria	224

4.1.4	Genes (Functional Genomics)	226
4.1.5	Other Genomic Considerations for Beet Improvement	232
4.2	Molecular Breeding (<i>G.N. Skaracis</i>)	234
4.2.1	Introduction	234
4.2.2	Genetic Mapping	236
4.2.3	Marker-assisted Selection	238
	4.2.3.1 Rhizomania resistance	239
	4.2.3.2 Bolting trait	240
	4.2.3.3 Fertility restoration	241
	4.2.3.4 Cercospora resistance	242
	4.2.3.5 Powdery mildew	242
	4.2.3.6 Sugar yield-related traits	243
	4.2.3.7 Nematode resistance	243
4.2.4	DNA Fingerprinting	244
	4.2.4.1 Genetic diversity in cultivated sugar beet and related species	245
	4.2.4.2 Characterization of germplasm and varieties	246
4.3	In Vitro Culture Technique (<i>G.N. Skaracis</i>)	247
4.3.1	Introduction	247
4.3.2	Micropropagation	248
4.3.3	Plant Regeneration	249
	4.3.3.1 Callus-mediated morphogenesis	250
	4.3.3.2 Direct morphogenesis	251
	4.3.3.3 Regeneration efficiency	251
4.3.4	Protoplast Culture	252
4.3.5	Haploid Production	253
4.3.6	Somaclonal Variation and Selection	255
4.4	Genetic Engineering (<i>G.N. Skaracis</i>)	255
4.4.1	Introduction	255
4.4.2	Methods of Genetic Transformation	256
	4.4.2.1 Vector-mediated transformation	257
	4.4.2.2 Direct DNA transformation	259
	4.4.2.3 Recent selection approaches	262
4.4.3	Transgenic Traits	262
	4.4.3.1 Herbicide resistance	263
	4.4.3.2 Rhizomania resistance	264

4.4.3.2	Rhizomania resistance	264
4.4.3.3	Altered carbohydrate metabolism	266
4.4.3.4	Environmental stress resistance	266
4.4.3.5	Resistance to fungi	267
4.4.3.6	Insect resistance	267
4.4.3.7	Nematode resistance	268
4.4.3.8	Bolting resistance	268
4.5	Final Considerations (<i>G.M. Skaracis</i>)	268
	<i>References</i>	269
5.	Seed Production	287
5.1	Agronomic Practices (<i>E. Biancardi</i>)	287
5.2	Pollen Isolation (<i>E. Biancardi</i>)	292
5.3	Biodiversity and Gene Flow (<i>D. Bartsch</i>)	297
5.3.1	Inter and Intra-specific Diversity in Genus <i>Beta</i>	299
5.3.2	Impact of Genetically Modified Beet on Biodiversity	300
5.3.3	Monitoring of GMO Gene Flow	301
5.4	Seed Quality and Conservation (<i>M. De Biaggi</i>)	302
	<i>References</i>	303
6.	Prospects in Sugar Beet Breeding	309
6.1	Breeding Targets (<i>G. Steinrücken</i>)	309
6.1.1	Fertilizers and Water	310
6.1.2	Pesticides	311
6.1.3	Herbicides	312
6.1.4	Sugar Yield	312
6.1.5	Processing Costs	312
6.1.6	Low Tare	313
6.1.7	New Products	313
6.2	Breeding Methods (<i>G. Steinrücken</i>)	314
6.2.1	Molecular Markers	314
6.2.2	Genetic Resources	315
6.2.3	New Genes	315
6.2.4	Genes and Environment	318
6.3	Challenges (<i>G. Steinrücken</i>)	319
	<i>References</i>	321
	Additional Information Sources	325
	Index	331
	About the Editors	369
