

Oxford Classic Texts
IN THE PHYSICAL SCIENCES

Principles and Applications
of Ferroelectrics and
Related Materials

M. E. Lines and A. M. Glass

CONTENTS

1. BASIC CONCEPTS	
1.1. Introduction	1
1.1.1. Historical	1
1.1.2. Definitions	8
1.2. A simple-model Hamiltonian	15
1.3. An outline of the statistical problem	19
2. STATISTICAL THEORY, SOFT MODES, AND PHASE TRANSITIONS	
2.1. Mean-field theory and the soft-mode concept	24
2.1.1. Statics	24
2.1.2. Dynamics	28
2.2. Correlated effective-field theory	32
2.3. The quasi-harmonic limit and self-consistent phonons	39
2.4. The deep double-well limit and the Ising model	45
2.5. Pseudo-spin formalism and the tunnel mode	52
2.5.1. Static mean-field theory	54
2.5.2. Dynamic mean-field theory	56
3. MACROSCOPICS AND PHENOMENOLOGY	
3.1. The elastic dielectric	59
3.1.1. Strain	60
3.1.2. Stress	60
3.1.3. Mechanical work and electrostatic work	61
3.2. Thermodynamics	63
3.2.1. Linear equations of state	66
3.2.2. Non-linear relations	69
3.3. Phenomenological theory for ferroelectrics	71
3.3.1. Second-order ferroelectric phase transitions	72
3.3.2. First-order ferroelectric phase transitions	76
3.4. Macroscopic phenomenology for antiferroelectrics	81
4. DOMAINS, IMPERFECTIONS, AND POLARIZATION REVERSAL	
4.1. Domains	87
4.1.1. Observation of domains	88
4.1.2. Free energy of domains	94
4.1.3. Minimizing the free energy	99
4.1.4. The effect of free carriers	101
4.2. Polarization reversal	102
4.2.1. Barkhausen pulses	111
4.3. The influence of defects	112
4.4. Surfaces	117

5. EXPERIMENTAL STUDY OF THERMODYNAMIC PROPERTIES	
5.1. Poling	127
5.2. Experimental constraints	129
5.3. Small-signal dielectric measurements	133
5.4. Pyroelectric measurements	141
5.5. Electrocaloric effect	148
5.6. Specific heat	150
5.7. Thermal expansion, elastic constants, and piezoelectricity	155
5.8. High-pressure studies	160
5.9. The effect of high electric fields	169
6. STRUCTURAL CRYSTALLOGRAPHY AND PHASE TRANSITIONS	
6.1. X-ray diffraction and static structure determination	174
6.1.1. General theory of X-ray diffraction	174
6.1.2. Structural classification for ferroelectrics	179
6.2. Elastic neutron scattering and the problems of structure refinement	183
6.3. Diffuse X-ray scattering and static displacement correlations	189
6.4. Inelastic neutron scattering and dynamic crystallography	199
6.4.1. $KTa_{1-x}Nb_xO_3$ and perovskite soft mode dynamics	202
6.4.2. KD_2PO_4 and hydrogen-bond dynamics	206
7. STUDY OF SOFT MODES USING INFRARED AND OPTIC TECHNIQUES	
7.1. The dielectric function and linear response	209
7.2. Infrared spectra	217
7.3. Raman spectroscopy	225
7.3.1. Basic concepts	225
7.3.2. Some experimental studies	230
7.3.3. Rayleigh scattering and critical opalescence	238
8. OXYGEN OCTAHEDRA	
8.1. The ferroelectric perovskites	241
8.1.1. Barium titanate	244
8.1.2. Potassium niobate	246
8.1.3. Potassium tantalate niobate (KTN)	248
8.1.4. Lead titanate	248
8.1.5. Sodium niobate	250
8.1.6. Potassium tantalate	252
8.1.7. Strontium titanate	255
8.2. Antiferroelectric and cell-doubling perovskites	256
8.2.1. Zone-boundary lattice-mode condensation	257
8.2.2. Lead zirconate	261
8.3. Lithium tantalate and lithium niobate	266
8.3.1. Local-mode analysis	269
8.3.2. Low-temperature polarization	271
8.3.3. Stoichiometry	275
8.4. Tungsten-bronze-type structures	280
8.4.1. Diffuse phase transitions	285

9. ORDER-DISORDER FERROELECTRICS	
9.1. KDP-type ferroelectrics (theory)	293
9.2. KDP-type ferroelectrics (experiment)	304
9.2.1. KH_2PO_4 (KDP) and KD_2PO_4 (DKDP)	304
9.2.2. Other KDP ferroelectric isomorphs	313
9.3. $(\text{NH}_4)\text{H}_2\text{PO}_4$: a KDP-type antiferroelectric	315
9.4. Triglycine sulphate (TGS)	321
9.5. Sodium nitrite (NaNO_2)	327
10. COUPLING TO THE SOFT MODE	
10.1. Acoustic anomalies near ferroelectric transitions	334
10.1.1. Anomalies in sound velocity and elastic constants	334
10.1.2. Ultrasonic attenuation	343
10.2. Extrinsic (improper) ferroelectrics and ferroelastics	347
10.3. Gadolinium molybdate and its isomorphs	355
10.4. Classification of ferro-materials	363
11. CRITICAL PHENOMENA	
11.1. Landau theory	371
11.2. Modern theories of critical phenomena	377
11.3. Experimental observation of static critical phenomena	385
11.3.1. Ferroelectrics	386
11.3.2. Antiferrodistortive transitions	390
11.4. Dynamic scaling and the soft mode	393
11.5. Experimental observation of critical dynamics	398
11.5.1. Displacement transitions	399
11.5.2. Order-disorder transitions	403
12. MAGNETIC AND OPTIC STUDIES OF LOCAL ENVIRONMENT	
12.1. Introduction	408
12.2. Nuclear magnetic resonance	409
12.2.1. Basic concepts	409
12.2.2. Some experimental findings	417
12.3. Electron paramagnetic resonance	422
12.4. Mössbauer spectroscopy	428
12.4.1. Theory	428
12.4.2. Experimental observations	435
12.5. Optical spectroscopy	438
12.5.1. Electronic band structure	439
12.5.2. Impurity spectra	443
12.5.3. Colour centres and polarons	446
12.5.4. Stimulated emission	448
12.6. Excited-state polarization	448
12.7. Photovoltaic effects	453
12.8. The photorefractive effect	459
13. NON-LINEAR OPTICS	
13.1. Wave propagation in non-linear dielectrics	467
13.1.1. Phase matching	470

13.2.	Electro-optics and non-linear optic coefficients	477
13.2.1.	The non-linear susceptibility	477
13.2.2.	The anharmonic oscillator	484
13.2.3.	Bond anharmonic polarizability model	489
13.2.4.	The polarization potential	497
13.3.	Hyper-Rayleigh and hyper-Raman scattering	501
14.	SEMICONDUCTOR FERROELECTRICS	
14.1.	Ferroelectric instabilities in narrow-band-gap materials	503
14.2.	The effect of impurity carriers on ferroelectric stability	508
14.3.	Antimony sulphoiodide	513
14.4.	Germanium telluride and isomorphs	519
15.	FILMS, CERAMICS, AND METASTABLE POLARIZATION	
15.1.	Thin films	525
15.2.	Ceramics	531
15.2.1.	Grain boundaries	531
15.2.2.	Semiconducting ceramics	534
15.2.3.	Effect of impurities	537
15.2.4.	Optical ceramics	540
15.2.5.	Glassy ceramics	544
15.3.	Metastable polarization	545
15.3.1.	Electrets	546
15.3.2.	Liquid crystals	550
15.3.3.	Pyroelectric polymers	553
16.	APPLICATIONS OF FERROELECTRICS	
16.1.	Introduction	559
16.2.	Pyroelectric detection	561
16.2.1.	Responsivity	562
16.2.2.	Noise limitations	565
16.2.3.	Pulse detection	566
16.2.4.	Heterodyne detection	567
16.2.5.	Optimizing detector performance	568
16.2.6.	Pyroelectric energy conservation	571
16.2.7.	Excited-state polarization	572
16.2.8.	Pyroelectric imaging	573
16.3.	Memories and display	578
16.3.1.	Electrically read memories	578
16.3.2.	Optically read memories	579
16.3.3.	Light valves	580
16.3.4.	Light-valve arrays	582
16.3.5.	High-capacity memories	585
16.3.6.	Display	590
16.4.	Electro-optic modulators	591
16.4.1.	The linear electro-optic modulator	592
16.4.2.	Geometric considerations	597
16.4.3.	Material considerations	598
16.4.4.	Travelling-wave modulators	601
16.4.5.	The quadratic electro-optic effect	602
16.4.6.	Waveguide modulators	604
