CONTENTS

Preface ix

PART ONE

The Study of Animal Behavior 2

1 Introduction to Animal Behavior 4

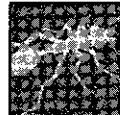

- Why We Study Animal Behavior 4
- The Monarch Butterfly: A Case Study 5
 - Behavioral Genetics and Evolution* 6
 - Mechanisms of Behavior* 6
 - Food and Shelter* 7
 - Social Organizations and Mating Systems* 7
- Proximate Versus Ultimate Causation 7

2 History of the Study of Animal Behavior 9

- Interest in Animal Behavior 9
 - Early Humans* 9
 - Classical World* 10
- Foundations of Animal Behavior 10
 - Theory of Evolution by Natural Selection* 11
 - Comparative Method* 12
- Experimental Approaches 12
 - Studies of Mechanisms* 13
 - Studies of Function and Evolution* 14
 - Behavioral Ecology and Sociobiology* 17
- Summary 18

3 Approaches and Methods 20

- Approaches 21
 - Ethology* 21
 - Comparative Psychology* 23
 - Behavioral Ecology and Sociobiology* 24
- Design Features in Animal Behavior Studies 25
 - Definitions and Records* 25
 - Design of the Experiment* 26
 - Variation and Variance* 28
 - Capturing, Marking, and Tracking Animals and Animal Signs* 29
 - Field Methods for Data Collection* 30
 - Observational Methods* 31
 - Method Pitfalls* 32
- Applied Animal Behavior 34
- Using Animals in Research 34
- Summary 35

PART TWO

Behavior Genetics and Evolution 38

4 Genes and Evolution 40

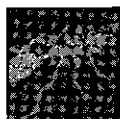

- Basic Principles of Genetics 41
 - Chromosomes, Genes, and Alleles* 41
 - Mutation as a Source of Genetic Variation* 42
 - Sexual Reproduction and Genetic Variation* 43
- An Introduction to Evolution 44
 - Darwin and the Theory of Natural Selection* 44
 - Other Causes of Evolution* 45
 - The Hardy-Weinberg Equilibrium* 46
 - Fitness and Adaptation* 48
 - Units of Selection* 48
- Cautions About Adaptive Explanations 49
- Summary 50

5 Behavioral Genetics 52

- Questions in Behavioral Genetics 52
- Studying Single Gene Effects 53
 - Mendelian Crosses* 53
 - Mutations and Knockout Genes* 54
 - Mosaics* 54
- Studying Multigenic Effects: Simpler Methods 55
 - Cross-Fostering Experiments* 55
 - Twin and Adoption Studies* 55
 - Inbred Lines* 56
- Studying Multigenic Effects: Quantitative Genetics 57
 - Quantitative Traits and the Sources of Behavioral Variation* 57
 - Heritability* 58
- Quantitative Genetics Techniques 58
 - Artificial Selection* 58
 - Parent-Offspring Regression* 60
 - Caveats about Heritability Estimates* 61
 - Quantitative Trait Locus Analysis* 61
- Summary 62

6 Evolution of Behavior Patterns 63

- Microevolutionary Changes in Behavior 64
 - Domestication and Behavioral Change* 64
 - Natural Selection in the Field* 66
- Macroevolutionary Changes in Behavior 67
 - Behavior and the Fossil Record* 67
 - Studies of Adaptive Radiation* 67
 - Phylogeny and the Comparative Approach* 69
 - Behavior and Speciation* 73
- Summary 75

PART THREE

Mechanisms of Behavior 78

7 The Nervous System 80

The Nerve Cell 80

- The Neuron at Rest 81*
- Action Potentials 82*
- Synapses 82*

Phylogenetic Variation Across Nervous Systems 84

- Simple Systems 84*
- Radially Symmetrical Nervous Systems 84*
- Bilaterally Symmetrical Nervous Systems 85*
- The Vertebrate Nervous System 85*

Sensory Receptors 85

- Chemoreceptors 87*
- Mechanoreceptors 88*
- Electroreceptors 88*
- Thermoreceptors 89*
- Photoreceptors 89*
- Processing and Filtering Sensory Information 91*

The Control of Movement 92

Methods of Investigating the Nervous System 92

- Recording Neural Activity, Neural Stimulation, and Self-Stimulation 92*
- Transection, Lesions, and Transplantations 93*
- Functional Neuroanatomy and Imaging 93*
- Psychopharmacology and Cannulation 94*
- Metabolic Activity of Neurons 94*
- Potential Problems 94*

Examples of Neurobiology and Behavior 94

- The Mechanics of Feeding 94*
- Repetitive Movement 95*
- Escaping Danger 95*
- Detecting Prey 96*
- Communication 97*
- Learning and Memory 101*

Summary 102

8 Hormones and Behavior, and Immunology and Behavior 104

General Features of Endocrine Systems 105

Invertebrate Endocrine Systems 106

Vertebrate Endocrine Systems 106

Experimental Methods 109

Organizational Effects 110

- Sexual and Aggressive Behavior 110*
- Additional Examples of Organizational Effects 112*
- Thyroid and Adrenal Glands 113*
- Invertebrates 113*

Activational Effects 114

- Aggression and Sexual Behavior Patterns 114*
- Hormones and Cognition 115*
- Secondary Sex Characteristics 115*
- Sexual Attraction 115*
- Eclosion 115*
- Life Stages 116*
- Molting 116*
- Color Change 116*

Behavior-Endocrine Effects 116

Endocrine-Environment-Behavior Interactions 117

- Reproductive Sequence in Ring Doves 117*
- Parturition and Maternal Behavior in Rats 120*
- Reproduction in Lizards 121*
- Reproduction in House Sparrows 122*

Hormone-Brain Relationships 123

Hormones and Ecology 124

Immune System and Behavior 125

- Immune System 125*
- Implications for Behavior 125*

Summary 126

9 Biological Rhythms 128

Biological Rhythms 129

- Types of Rhythms 129*
- Endogenous Pacemaker 131*
- Zeitgebers 133*
- Models 134*
- Location and Physiology of the Pacemaker 135*

Significance of Biological Timekeeping 138

- Ecological Adaptations 138*
- Diurnality 138*
- Applied Aspects of Circadian Clocks 140*
- Hibernation 140*
- Migration 141*
- Combined Clocks 141*

Summary 142

10 Development of Behavior 144

Nature-Nurture-Niche 144

- Genetic Influences 145*
- Environmental Influences 147*
- Epigenesis and Ontogenetic Niche 147*

Embryology of Behavior 148

- Nervous System Development 148*
- Sensory and Motor Stimulation 149*
- Maternal Experiences Affect Offspring Behavior 151*

Early Postnatal Events 151

- Imprinting 152*
- Development of Feeding and Food Preferences 155*

Juvenile Events: Birds and Mammals 157

- Deprivation/Enrichment Experiments 157*
- Bird Song 158*
- Puberty in Female House Mice 162*

Juvenile Events: Insects and Fish 162

- Insects 163*
- Fish 165*

Play Behavior 166

- Functions 166*
- Canids 167*
- Keas 168*
- Human Children 168*

Development Into Adult Life 168

Summary 170

11 Learning 172

Forms of Learning 172

- Habituation* 173
- Classical Conditioning* 173
- Sensitization* 174
- Operant Conditioning* 175
- Classical and Operant Conditioning Compared* 175
- Other Aspects of Learning* 177

Invertebrate Learning 178

- Protozoa and Cnidaria* 178
- Platyhelminthes and Annelida* 179
- Mollusca* 180
- Arthropoda* 181

Vertebrate Learning 182

- Rats and Monkeys* 182
- Vertebrate Intelligence* 183

Comparisons Across Phyla 184

Preparedness and Constraints on Learning 184

- Biological Constraints—Preparedness* 184
- Methodological Constraints* 185

Learning as Adaptive Behavior 186

- Feeding* 186
- Predator-Prey Relations* 187
- Reproduction and Parenting* 188

Animal Cognition 189

- Pigeons* 189
- Chimpanzees* 190
- Parrots* 190
- Vervet Monkeys* 191
- Corvids* 191
- Song Learning* 192
- Self-Recognition* 193

Summary 193

12 Communication 196

What Is Communication? 197

How Do Signals Convey Information? 198

- Discrete and Graded Signals* 198
- Distance and Duration* 198
- Composite Signals, Syntax, and Context* 198
- Metacommunication* 199

Functions of Communication 199

- Group Spacing and Coordination* 199
- Recognition* 199
- Reproduction* 202
- Agonism and Social Status* 203
- Alarm* 203
- Finding Food* 205
- Giving and Soliciting Care* 205
- Soliciting Play* 205
- Synchronization of Hatching* 205

Channels of Communication 206

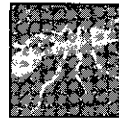

- Odor* 206
- Sound* 207
- Low-Frequency Sound and Seismic Vibrations* 208
- Touch* 209
- Electric Field* 210
- Vision* 211

Evolution of Displays 211

Complex Communication 213

- Food Location in Honeybees* 213
- Language Acquisition* 214

Summary 216

PART FOUR

Finding Food and Shelter 218

13 Migration, Orientation, and Navigation 220

Migration 220

- Birds* 221
- Mammals* 224
- Other Vertebrates* 226
- Invertebrates* 226

Orientation 228

Navigation 228

- Path Integration* 230
- Piloting* 230
- Compass Orientation* 231
- Olfactory Cues* 234
- Magnetic Field* 235
- Meteorological Cues* 236
- Neural Mechanisms* 236

Summary 237

14 Habitat Selection 239

Presence or Absence of Species: Factors Restricting Habitat Use 240

- Dispersal Ability* 240
- Behavior* 241
- Interactions with Other Organisms* 241
- Physical and Chemical Factors* 243

Dispersal from the Place Of Birth 243

- Inbreeding Avoidance Hypothesis* 244
- Intraspecific Competition Hypothesis* 245
- Examples of Dispersal* 245
- Inbreeding Versus Outbreeding* 246

Habitat Choice and Reproductive Success 246

Proximate Factors: Environmental Cues 247

Determinants of Habitat Preference 250

- Heredity* 250
- Learning and Early Experience* 251
- Tradition* 252

Theory of Habitat Selection 253

Summary 254

15 Foraging Behavior 256

Optimality Theory 256

Foraging Models 257

- Choice of Food Items: The Prey Model* 257
- How Long to Stay in a Patch* 260
- Central-Place Foraging* 261
- Risk-Sensitive Foraging* 261
- Effects of Competitors on Foraging Behavior* 263
- Effects of Predators on Foraging Behavior* 264
- State-Sensitive Models of Foraging* 264

Techniques for Acquiring Food 264

- Modifying Food Supply* 264
- Trap Building* 266
- Electromagnetic Fields* 266

Aggressive Mimicry 266
Tools 267

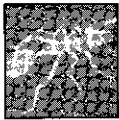

Foraging and Social Behavior 268

Sharing Information 268
Cooperative Hunting 268

Defense Against Predators 271

Individual Strategies 271
Social Strategies 275

Summary 277

PART FIVE

Social Organization and Mating Systems 278

16 Conflict 280

Aggression, Agonistic Behavior, and Competition 280

Definitions 280
Competition for Resources 281
Exploitation and the Ideal Free Distribution 281
Interference Competition and Resources Defense 281

Conflict about Physical Space 281

Territory 283

Dominance 287

Dominance Hierarchies 287
Dominance Hierarchy in the Rhesus Monkey 289
Cost and Benefits of Dominance 290

Infanticide and Siblicide 292

Internal Factors in Aggression 293

Hormones 293
Neural Mechanisms 294
Genetics 295

External Factors in Aggression 296

Learning and Experience 296
Pain and Frustration 296
Social Factors 297
Sex and Hunger 297

Evolution of Restraint and Appeasement 297

Game Theory Models 297

Relevance for Humans 299

Social Control and Social Disorganization 299

Summary 300

17 Sexual Reproduction and Parental Care 302

Cost and Benefits of Sex 302

Cost of Sex 303
Benefits of Sex 303

Anisogamy and the Bateman Gradient 304

Sex Determination and the Sex Ratio 305

Sexual Selection 307

Intersexual Selection 308
Intrasexual Selection 312

Summary 315

18 Mating Systems and Parental Care 317

Mating Systems 317

Monogamy 318
Polygyny 318
Polyandry 320
Ecology and Mating Systems 321
Alternative Reproductive Tactics 322

Parental Care 323

Ecological Factors 323
Which Sex Should Invest? 324
Examples of Parental Investment 325

Parent-Offspring Recognition 326

Parent-Offspring Conflict 328

Sibling Rivalry 328

Summary 330

19 Social Behavior 332

Changing Perspectives in the Study of Social Behavior 333

Early Studies 333
Later Studies 333

Why Live in Groups? 333

Benefits of Group Living 334
Cost of Group Living 335

The Evolution of Cooperation and Altruism 336

Kin Selection 337
Reciprocity 338
Mutualism and the Appearance of Altruism 340

Examples of Social Systems 341

A Taxonomic Overview 341
Communal Breeding and Helpers at the Nest 343
Eusociality 345
Humans 348

Summary 349
