Acknowledgments	xvii
1. A Gentle Introduction	1
How Much Math Do I Need to Do Statistics?	2
The General Purpose of Statistics: Understanding the World	2
Another Purpose of Statistics:	
Making an Argument or a Decision	3
What Is a Statistician?	3
One Role: The Curious Detective	3
Another Role: The Honest Attorney	4
A Final Role: A Good Storyteller	5
Liberal and Conservative Statisticians	6
Descriptive and Inferential Statistics	7
Experiments Are Designed to Test Theories and Hypotheses	8
Oddball Theories	9
Bad Science and Myths	10
Eight Essential Questions of Any Survey or Study	11
1. Who Was Surveyed or Studied?	11
2. Why Did the People Participate in the Study?	12
3. Was There a Control Group and Did the Control Group Receive a Placebo?	12
4. How Many People Participated in the Study?	13
5. How Were the Questions Worded to the Participants in the Study?	14
6. Was Causation Assumed From a Correlational Study?	15
7. Who Paid for the Study?	16
8. Was the Study Published in a Peer-Reviewed Journal?	16
On Making Samples Representative of the Population	17
Experimental Design and Statistical Analysis as Controls	18
The Language of Statistics	19
On Conducting Scientific Experiments	20
The Dependent Variable and Measurement	21
Operational Definitions	21

Measurement Error	21
Measurement Scales: The Difference Between Continuous and Discrete Variables	22
Types of Measurement Scales	23
Nominal Scales	23
Ordinal Scales	23
Interval Scales	24
Ratio Scales	25
Rounding Numbers and Rounding Error	25
Statistical Symbols	26
Summary	27
History Trivia: Achenwall to Nightingale	28
Key Terms, Symbols, and Definitions	29
Chapter 1 Practice Problems	31
Chapter 1 Test Questions	33
2. Descriptive Statistics: Understanding Distributions of Numbers	37
The Purpose of Graphs and Tables:	
Making Arguments and Decisions	38
How a Good Graph Stopped a Cholera Epidemic	39
How Bad Graphs and Tables Contributed to the Space Shuttle <i>Challenger</i> Explosion	40
How a Poor PowerPoint Presentation Contributed to the Space Shuttle <i>Columbia</i> Disaster	41
A Summary of the Purpose of Graphs and Tables	41
1. Document the Sources of Statistical Data and Their Characteristics	42
2. Make Appropriate Comparisons	42
3. Demonstrate the Mechanisms of Cause and Effect and Express the Mechanisms Quantitatively	43
4. Recognize the Inherent Multivariate Nature of Analytic Problems	43
5. Inspect and Evaluate Alternative Hypotheses	44
Graphical Cautions	44
Frequency Distributions	46
Shapes of Frequency Distributions	49
Grouping Data Into Intervals	49
Advice on Grouping Data Into Intervals	50
1. Choose Interval Widths That Reduce Your Data to 5 to 10 Intervals	50
2. Choose the Size of Your Interval Widths Based on Understandable Units, for Example, Multiples of 5 or 10	52
3. Make Sure That Your Chosen Intervals Do Not Overlap	52
The Cumulative Frequency Distribution	52

Cumulative Percentages, Percentiles, and Quartiles	53
Stem-and-Leaf Plot	54
Nonnormal Frequency Distributions	55
On the Importance of the Shapes of Distributions	56
Additional Thoughts About Good Graphs	
Versus Bad Graphs	57
Low-Density Graphs	57
Chart Junk	57
Changing Scales Midstream (or Mid-Axis)	57
Labeling the Graph Badly	58
The Multicolored Graph	58
PowerPoint Graphs and Presentations	58
History Trivia: De Moivre to Tukey	59
Key Terms and Definitions	60
Chapter 2 Practice Problems	61
Chapter 2 Test Questions	62
3. Statistical Parameters:	
Measures of Central Tendency and Variation	67
Measures of Central Tendency	67
The Mean	68
The Median	69
The Mode	71
Choosing Between Measures of Central Tendency	72
Klinkers and Outliers	73
Uncertain or Equivocal Results	74
Measures of Variation	75
The Range	75
The Standard Deviation	76
Correcting for Bias in the Sample Standard Deviation	77
How the Square Root of $x^2$ Is Almost	
Equivalent to Taking the Absolute Value of $x$	78
The Computational Formula for Standard Deviation	78
The Variance	79
The Sampling Distribution of Means, the Central	
Limit Theorem, and the Standard Error of the Mean	80
The Use of the Standard Deviation for Prediction	80
Practical Uses of the Empirical Rule:	
As a Definition of an Outlier	82
Practical Uses of the Empirical Rule:	
Prediction and IQ Tests	82
Some Further Comments	82
History Trivia: Fisher to Eels	83
Key Terms, Symbols, and Definitions	83
Chapter 3 Practice Problems	84
Chapter 3 Test Questions	85

4. Standard Scores, the $z$ Distribution, and Hypothesis Testing	89
Standard Scores	89
The Classic Standard Score: The $z$ Score and the $z$ Distribution	91
Calculating $z$ Scores	92
More Practice on Converting Raw Data Into $z$ Scores	92
Converting From $z$ Scores to Other Types of Standard Scores	94
The $z$ Distribution	95
Interpreting Negative $z$ Scores	96
Testing the Predictions of the Empirical Rule With the $z$ Distribution	96
Why Is the $z$ Distribution So Important?	97
How We Use the $z$ Distribution to Test Experimental Hypotheses	98
More Practice With the $z$ Distribution and $T$ Scores	99
Example 1: Finding the area in a $z$ distribution that falls above a known score where the known score is above the mean	99
Example 2: Finding the area in a $z$ distribution that falls below a known score where the known score is above the mean	100
Example 3: Finding the area in a $z$ distribution that falls below a known score where the known score is below the mean	102
Example 4: Finding the area in a $z$ distribution that falls above a known score where the known score is below the mean	103
Example 5: Finding the area in a $z$ distribution that falls between two known scores where both known scores are above the mean	105
Example 6: Finding the area in a $z$ distribution that falls between two known scores where one known score is above the mean and one is below the mean	107
Example 7: Finding the area in a $z$ distribution that falls between two known scores where both known scores are below the mean	108
Summarizing Scores Through Percentiles	110
History Trivia: Karl Pearson to Egon Pearson	112
Key Terms and Definitions	113
Chapter 4 Practice Problems	113
Chapter 4 Test Questions	114
5. Inferential Statistics: The Controlled Experiment, Hypothesis Testing, and the $z$ Distribution	119
Hypothesis Testing in the Controlled Experiment	121
Hypothesis Testing: The Big Decision	122
How the Big Decision Is Made: Back to the $z$ Distribution	122

The Parameter of Major Interest	
in Hypothesis Testing: The Mean	124
Nondirectional and Directional Alternative Hypotheses	125
A Debate: Retain the Null Hypothesis	
or Fail to Reject the Null Hypothesis	126
The Null Hypothesis as a Nonconservative Beginning	127
The Four Possible Outcomes in Hypothesis Testing	127
1. Correct Decision: Retain $H_0$ , When	
$H_0$ Is Actually True	127
2. Type I Error: Reject $H_0$ , When	
$H_0$ Is Actually True	128
3. Correct Decision: Reject $H_0$ , When	
$H_0$ Is Actually False	128
4. Type II Error: Retain $H_0$ , When	
$H_0$ Is Actually False	128
Significance Levels	129
Significant and Nonsignificant Findings	129
Trends, and Does God Really Love the .05 Level of	
Significance More Than the .06 Level?	130
Directional or Nondirectional Alternative Hypotheses:	
Advantages and Disadvantages	130
Did Nuclear Fusion Occur?	131
Baloney Detection	132
How Reliable Is the Source of the Claim?	132
Does This Source Often Make Similar Claims?	133
Have the Claims Been Verified by Another Source?	133
How Does the Claim Fit With Known	
Natural Scientific Laws?	134
Can the Claim Be Disproven or Has Only Supportive	
Evidence Been Sought?	135
Do the Claimants' Personal Beliefs and	
Biases Drive Their Conclusions or Vice Versa?	136
Conclusions About Science and Pseudoscience	137
The Most Critical Elements in the Detection of Baloney in	
Suspicious Studies and Fraudulent Claims	137
Can Statistics Solve Every Problem?	138
Probability	139
The Lady Tasting Tea	139
The Definition of the Probability of an Event	140
The Multiplication Theorem of Probability	140
Combinations Theorem of Probability	141
Permutations Theorem of Probability	142
Gambler's Fallacy	145
Coda	146
History Trivia: Egon Pearson to Karl Pearson	146
Key Terms, Symbols, and Definitions	147

Chapter 5 Practice Problems	148
Chapter 5 Test Questions	149
6. An Introduction to Correlation and Regression	153
Correlation: Use and Abuse	155
A Warning: Correlation Does Not Imply Causation	157
1. Marijuana Use and Heroin Use Are Positively Correlated	158
2. Milk Use Is Positively Correlated to Cancer Rates	158
3. Weekly Church Attendance Is Negatively Correlated With Drug Abuse	158
4. Lead Levels Are Positively Correlated With Antisocial Behavior	158
5. The Risk of Getting Alzheimer's Dementia Is Negatively Correlated With Smoking Cigarettes	159
6. Sexual Activity Is Negatively Correlated With Increases in Education	159
7. An Active Sex Life Is Positively Correlated With Longevity	160
8. Coffee Drinking Is Negatively Correlated With Suicidal Risk	160
9. Excessive Drinking and Smoking Causes Women to Be Abused	160
Another Warning: Chance Is Lumpy	161
Correlation and Prediction	161
The Four Common Types of Correlation	161
The Pearson Product-Moment Correlation Coefficient	162
Testing for the Significance of a Correlation Coefficient	164
Obtaining the Critical Values of the $t$ Distribution	165
Step 1: Choose a One-Tailed or Two-Tailed Test of Significance	166
Step 2: Choose the Level of Significance	166
Step 3: Determine the Degrees of Freedom ( $df$ )	166
Step 4: Determine Whether the $t$ From the Formula (Called the Derived $t$ ) Exceeds the Tabled Critical Values From the $t$ Distribution	166
If the Null Hypothesis Is Rejected	167
Representing the Pearson Correlation Graphically: The Scatterplot	167
Fitting the Points With a Straight Line: The Assumption of a Linear Relationship	167
Interpretation of the Slope of the Best-Fitting Line	169
The Assumption of Homoscedasticity	172
The Coefficient of Determination: How Much One Variable Accounts for Variation in Another Variable: The Interpretation of $r^2$	172

Quirks in the Interpretation of Significant and Nonsignificant Correlation Coefficients	173
Linear Regression	174
Reading the Regression Line	175
$R$	177
$R$ -Square	178
Adjusted $R$ -Square	178
Final Thoughts About Regression Analyses	180
Spearman's Correlation	180
Significance Test for Spearman's $r$	182
Ties in Ranks	182
Point-Biserial Correlation	184
Testing for the Significance of the Point-Biserial Correlation Coefficient	186
Phi ( $\phi$ ) Correlation	187
Testing for the Significance of Phi	188
History Trivia: Galton to Fisher	188
Key Terms, Symbols, and Definitions	190
Chapter 6 Practice Problems	191
Chapter 6 Test Questions	192
7. The $t$ Test for Independent Groups	197
The Statistical Analysis of the Controlled Experiment	197
One $t$ Test But Two Designs	198
Assumptions of the Independent $t$ Test	199
Independent Groups	199
Normality of the Dependent Variable	200
Homogeneity of Variance	200
The Formula for the Independent $t$ Test	200
You Must Remember This! An Overview of Hypothesis Testing With the $t$ Test	201
What Does the $t$ Test Do? Components of the $t$ Test Formula	201
What If the Two Variances Are Radically Different From One Another?	202
A Computational Example	202
Steps in the $t$ Test Formula	203
Steps in Determining Significance	205
The Power of a Statistical Test	207
Effect Size	208
The Correlation Coefficient of Effect Size	208
Confidence Intervals	209
Estimating the Standard Error	212
History Trivia: Gosset and Guinness Brewery	213
Key Terms and Definitions	214
Chapter 7 Practice Problems	215
Chapter 7 Test Questions	215

8. The $t$ Test for Dependent Groups	219
Variations on the Controlled Experiment	219
Design 1	220
Design 2	220
Design 3	221
Assumptions of the Dependent $t$ Test	221
Why the Dependent $t$ Test May Be More Powerful Than the Independent $t$ Test	222
How to Increase the Power of a $t$ Test	222
Drawbacks of the Dependent $t$ Test Designs	223
One-Tailed or Two-Tailed Tests of Significance	223
Hypothesis Testing and the Dependent $t$ Test: Design 1	224
Design 1 (Same Participants or Repeated Measures):	
A Computational Example	225
Determination of Effect Size	227
Design 2 (Matched Pairs): A Computational Example	228
Determination of Effect Size	231
Design 3 (Same Participants and Balanced Presentation):	
A Computational Example	231
Determination of Effect Size	234
History Trivia: Fisher to Pearson	234
Key Terms and Definitions	235
Chapter 8 Practice Problems	235
Chapter 8 Test Questions	236
9. Analysis of Variance: One-Factor	
Completely Randomized Design	241
A Limitation of Multiple $t$ Tests and a Solution	241
The Equally Unacceptable Bonferroni Solution	242
The Acceptable Solution: An Analysis of Variance	242
The Null and Alternative	
Hypotheses in Analysis of Variance	243
The Beauty and Elegance of the $F$ Test Statistic	244
The $F$ Ratio	245
How Can There Be Two Different Estimates of Within-Groups Variance?	245
ANOVA Designs	247
ANOVA Assumptions	248
Pragmatic Overview	248
What a Significant ANOVA Indicates	249
A Computational Example	249
Degrees of Freedom for the Numerator	252
Degrees of Freedom for the Denominator	252
Determining Effect Size in ANOVA	253
History Trivia: Gosset to Fisher	254
Key Terms and Definitions	256

Chapter 9 Practice Problems	257
Chapter 9 Test Questions	258
10. After a Significant Analysis of Variance:	
Multiple Comparison Tests	263
Conceptual Overview of Tukey's Test	264
Computation of Tukey's HSD Test	264
What to Do If the Error Degrees of Freedom	
Are Not Listed in the Table of Tukey's $q$ Values	266
Determining What It All Means	266
On the Importance of Nonsignificant Mean Differences	268
Final Results of ANOVA	268
Tukey's With Unequal $N$ s	268
Key Terms, Symbols, and Definitions	269
Chapter 10 Practice Problems	269
Chapter 10 Test Questions	269
11. Analysis of Variance:	
One-Factor Repeated-Measures Design	273
The Repeated-Measures ANOVA	273
Assumptions of the One-Factor	
Repeated-Measures ANOVA	274
Computational Example	274
Determining Effect Size in ANOVA	278
Key Terms and Definitions	279
Chapter 11 Practice Problems	279
Chapter 11 Test Questions	280
12. Analysis of Variance: Two-Factor	
Completely Randomized Design	283
Factorial Designs	283
The Most Important Feature of a	
Factorial Design: The Interaction	284
Fixed and Random Effects and In Situ Designs	284
The Null Hypotheses in a Two-Factor ANOVA	285
Assumptions and Unequal Numbers of Participants	285
Computational Example	286
Computation of the First Main Effect	287
Computation of the Second Main Effect	287
Computation of the Interaction Between	
the Two Main Effects	288
Interpretation of the Results	290
Key Terms and Definitions	291
Chapter 12 Practice Problems	291
Chapter 12 Test Questions	292
13. Post Hoc Analysis of Factorial ANOVA	297
Main Effect Interpretation: Gender	297

Why a Multiple Comparison Test Is Unnecessary for a Two-Level Main Effect, and When Is a Multiple Comparison Test Necessary?	298
Main Effect: Age Levels	298
Multiple Comparison Test for the Main Effect for Age	299
Warning: Limit Your Main Effect Conclusions When the Interaction Is Significant	301
Multiple Comparison Tests	302
Interpretation of Interaction Effect	302
For the Males	304
For the Females	305
Males Versus Females	305
Final Summary	305
Writing Up the Results Journal Style	305
Language to Avoid	306
Exploring the Possible Outcomes in a Two-Factor ANOVA	306
Determining Effect Size in a Two-Factor ANOVA	308
History Trivia: Fisher and Smoking	309
Key Terms, Symbols, and Definitions	310
Chapter 13 Practice Problems	310
Chapter 13 Test Questions	311
14. Factorial Analysis of Variance: Additional Designs	315
The Split-Plot Design	315
Overview of the Split-Plot ANOVA	316
Computational Example	316
Main Effect: Social Facilitation	321
Main Effect: Trials	321
Interaction: Social Facilitation $\times$ Trials	322
Two-Factor ANOVA: Repeated Measures on Both Factors Design	322
Overview of the Repeated-Measures ANOVA	322
Computational Example	323
Key Terms and Definitions	330
Chapter 14 Practice Problems	330
Chapter 14 Test Questions	331
15. Nonparametric Statistics: The Chi-Square Test	335
Overview of the Purpose of Chi-Square	336
Overview of Chi-Square Designs	337
Chi-Square Test: Two-Cell Design (Equal Probabilities Type)	337
Computation of the Two-Cell Design	338
The Chi-Square Distribution	339
Assumptions of the Chi-Square Test	340
Chi-Square Test: Two-Cell Design (Different Probabilities Type)	340

Computation of the Two-Cell Design	341
Interpreting a Significant Chi-Square Test for a Newspaper	342
Chi-Square Test: Three-Cell Experiment (Equal Probabilities Type)	343
Computation of the Three-Cell Design	343
Chi-Square Test: Two-by-Two Design	344
Computation of the Chi-Square Test: Two-by-Two Design	345
What to Do After a Chi-Square Test Is Significant	348
When Cell Frequencies Are Less Than 5 Revisited	349
History Trivia: Pearson and <i>Biometrika</i>	350
Key Terms, Symbols, and Definitions	350
Chapter 15 Practice Problems	350
Chapter 15 Test Questions	351
16. Other Statistical Parameters and Tests	355
Health Science Statistics	356
Test Characteristics	356
Risk Assessment	359
Parameters of Mortality and Morbidity	361
Analysis of Covariance	363
Multivariate Analysis of Variance	363
Multivariate Analysis of Covariance	364
Factor Analysis	365
Multiple Regression	366
Canonical Correlation	366
Linear Discriminant Function Analysis	367
Cluster Analysis	368
A Summary of Multivariate Statistics	368
Coda	369
Key Terms and Definitions	369
Chapter 16 Practice Problems	371
Chapter 16 Test Questions	371
Appendix A: $z$ Distribution	375
Appendix B: $t$ Distribution	381
Appendix C: Spearman's Correlation	383
Appendix D: The Chi-Square Distribution	385
Appendix E: $F$ Distribution	387
Appendix F: Tukey's Table	389
References	391
Index	393
About the Author	397
