

MODERN FOOD MICROBIOLOGY

SEVENTH EDITION

JAMES M. JAY

MARTIN J. LOESSNER

DAVID A. GOLDEN

Contents

Part I—HISTORICAL BACKGROUND	1
1—History of Microorganisms in Food	3
Historical Developments	4
Food Preservation	5
Food Spoilage	6
Food Poisoning	7
Food Legislation	8
Part II—HABITATS, TAXONOMY, AND GROWTH PARAMETERS	11
2—Taxonomy, Role, and Significance of Microorganisms in Foods	13
Bacterial Taxonomy	14
rRNA Analyses	14
Analysis of DNA	15
The Proteobacteria	15
Primary Sources of Microorganisms Found in Foods	17
Synopsis of Common Foodborne Bacteria	20
Synopsis of Common Genera of Foodborne Molds	27
Synopsis of Common Genera of Foodborne Yeasts	31
3—Intrinsic and Extrinsic Parameters of Foods That Affect Microbial Growth	39
Intrinsic Parameters	39
pH	39
Moisture Content	45
Oxidation–Reduction Potential	49
Nutrient Content	52
Antimicrobial Constituents	53
Biological Structures	54
Extrinsic Parameters	54
Temperature of Storage	54
Relative Humidity of Environment	56
Presence and Concentration of Gases in the Environment	56
Presence and Activities of Other Microorganisms	56

Part III—MICROORGANISMS IN FOODS	61
4—Fresh Meats and Poultry	63
Biochemical Events That Lead to Rigor Mortis	64
The Biota of Meats and Poultry	64
Incidence/Prevalence of Microorganisms in Fresh Red Meats	66
Bacteria	68
Soy-Extended Ground Meats	73
Mechanically Deboned Meats	74
Hot-Boned Meats	75
Organ and Variety Meats	77
Microbial Spoilage of Fresh Red Meats	78
Mechanism	82
Spoilage of Fresh Livers	87
Incidence/Prevalence of Microorganisms in Fresh Poultry	88
Microbial Spoilage of Poultry	89
Carcass Sanitizing/Washing	91
 5—Processed Meats and Seafoods	 101
Processed Meats	101
Curing	101
Smoking	103
Sausage, Bacon, Bologna, and Related Products	103
Spoilage	104
Bacon and Cured Hams	108
Safety	108
Seafoods	109
Fish and Shellfish	109
Microorganisms	109
Spoilage of Fish and Shellfish	115
Fish	115
Shellfish	118
 6—Vegetable and Fruit Products	 125
Fresh and Frozen Vegetables	125
Spoilage	128
Bacterial Agents	128
Fungal Agents	134
Spoilage of Fruits	137
Fresh-Cut Produce	138
Microbial Load	138
Seed Sprouts	139
Pathogens	140
Internalization of Pathogens	142
Disease Outbreaks	143

7—Milk, Fermentation, and Fermented and Nonfermented Dairy Products	149
Fermentation	149
Background	149
Defined and Characterized	150
The Lactic Acid Bacteria	150
Metabolic Pathways and Molar Growth Yields	154
Acetic Acid Bacteria	155
Dairy Products	156
Milk	156
Processing	157
Pasteurization	157
General Microbiota of Milk	158
Milk-Borne Pathogens	158
Spoilage	160
Probiotics and Prebiotics	161
Lactose Intolerance	162
Starter Cultures, Fermented Products	163
Fermented Products	164
Cheeses	168
Diseases caused by Lactic Acid Bacteria	169
8—Nondairy Fermented Foods and Products	175
Meat Products	175
Fish Products	178
Breads	179
Plant Products	180
Sauerkraut	180
Olives	180
Pickles	181
Beer, Ale, Wines, Cider, and Distilled Spirits	182
Beer and Ale	182
Wines	184
Cider	185
Distilled Spirits	186
Miscellaneous Products	188
9—Miscellaneous Food Products	197
Delicatessen and Related Foods	197
Eggs	198
Mayonnaise and Salad Dressing	202
Cereals, Flour, and Dough Products	203
Bakery Products	203
Frozen Meat Pies	204
Sugars, Candies, and Spices	204
Nutmeats	205
Dehydrated Foods	206

Enteral Nutrient Solutions (Medical Foods)	206
Single-Cell Protein (SCP)	207
Rationale for SCP Production	207
Organisms and Fermentation Substrates	207
SCP Products	209
Nutrition and Safety of SCP	209
Bottled Water	210

**Part IV—DETERMINING MICROORGANISMS AND/OR THEIR PRODUCTS
IN FOODS 215**

10—Culture, Microscopic, and Sampling Methods	217
Conventional Standard Plate Count	217
Homogenization of Food Samples	218
The Spiral Plater	219
Membrane Filters	220
Direct Epifluorescent Filter Technique	221
Microcolony-DEFT	221
Hydrophobic Grid Membrane Filter (HGMF)	222
Microscope Colony Counts	223
Agar Droplets	223
Dry Film and Related Methods	223
Most Probable Numbers	224
Dye Reduction	225
Roll Tubes	225
Direct Microscopic Count (DMC)	225
Howard Mold Counts	226
Microbiological Examination of Surfaces	226
Swab/Swab-Rinse Methods	227
Contact Plate	227
Agar Syringe/"Agar Sausage" Methods	228
Other Surface Methods	228
Metabolically Injured Organisms	229
Recovery/Repair	231
Mechanism of Repair	233
Viable but Nonculturable Organisms	233
11—Chemical, Biological, and Physical Methods	241
Chemical Methods	241
Thermostable Nuclease	241
<i>Limulus</i> Lysate for Endotoxins	244
Adenosine Triphosphate Measurement	247
Radiometry	247
Fluorogenic and Chromogenic Substrates	248
Immunological Methods	250
Serotyping	250
Fluorescent Antibody	251

Enrichment Serology	252
Salmonella 1–2 Test	252
Radioimmunoassay	253
ELISA	253
Gel Diffusion	255
Immunomagnetic Separation	255
Hemagglutination	256
Molecular Genetic Methods	256
Nucleic Acid (DNA) Probes	257
Polymerase Chain Reaction	258
<i>Lux</i> Gene Luminescence	261
Ice Nucleation Assay	262
Fingerprinting Methods	263
Bacteriophage Typing	263
Amplified Fragment Length Polymorphism	265
Multilocus Enzyme Electrophoresis Typing	265
Restriction Enzyme Analysis	266
Random Amplification of Polymorphic DNA	266
Pulsed Field Gel Electrophoresis	267
Restriction Fragment Length Polymorphism	267
Ribotyping	268
Microarrays	268
Physical Methods	269
Biosensors	269
Impedance	272
Microcalorimetry	273
Flow Cytometry	274
BioSys Instrument	275
12—Bioassay and Related Methods	285
Whole-Animal Assays	285
Mouse Lethality	285
Suckling (Infant) Mouse	288
Rabbit and Mouse Diarrhea	288
Monkey Feeding	289
Kitten (Cat) Test	289
Rabbit and Guinea Pig Skin Tests	289
Sereny and Anton Tests	290
Animal Models Requiring Surgical Procedures	290
Ligated Loop Techniques	290
The RITARD Model	291
Cell Culture Systems	291
Human Mucosal Cells	292
Human Fetal Intestine	292
Human Ileal and Intestinal Cells	292
Guinea Pig Intestinal Cells	292
HeLa Cells	294

Chinese Hamster Ovary Cells	294
Vero Cells	295
Y-1 Adrenal Cell Assay	295
Other Assays	295

Part V—FOOD PROTECTION AND SOME PROPERTIES OF PSYCHROTROPHS, THERMOPHILES, AND RADIATION-RESISTANT BACTERIA 299

13—Food Protection with Chemicals, and by Biocontrol	301
Benzoic Acid and The Parabens	301
Sorbic Acid	303
The Propionates	305
Sulfur Dioxide and Sulfites	305
Nitrites and Nitrates	306
Organisms Affected	307
The Perigo Factor	308
Interaction with Cure Ingredients and Other Factors	308
Nitrosamines	309
Nitrite—Sorbate and Other Nitrite Combinations	309
Mode of Action	310
Summary of Nitrite Effects	311
Food Sanitizers	312
Acidified Sodium Chlorite	312
Electrolized oxidizing water	312
Activated Lactoferrin (ALF, Activin)	314
Ozone (O ₃)	314
Hydrogen Peroxide (H ₂ O ₂)	315
Chlorine and Other Agents	317
NaCl and Sugars	320
Indirect Antimicrobials	321
Antioxidants	321
Flavoring Agents	322
Spices and Essential Oils	323
Phosphates	324
Medium-Chain Fatty Acids and Esters	324
Acetic and Lactic Acids	326
Salts of Acetic and Lactic Acids	326
Antibiotics	327
Monensin	328
Natamycin	329
Tetracyclines	329
Subtilin	330
Tylosin	330
Antifungal Agents for Fruits	330
Ethylene and Propylene Oxides	331
Miscellaneous Chemical Preservatives	331
Chitosans	331
Dimethyl Dicarbonate	332

Ethanol	332
Glucose Oxidase	333
Polyamino Acids	333
Biocontrol	333
Microbial Interference	333
Nisin and Other Bacteriocins	336
Other Bacteriocins	339
Endolysins	339
Bacteriophages as Biocontrol Agents	340
The Hurdle Concept	341
14—Food Protection with Modified Atmospheres	351
Definitions	351
Hypobaric (Low Pressure) Storage	351
Vacuum Packaging	352
Modified Atmosphere Packaging	353
Equilibrium-Modified Atmosphere	353
Controlled-Atmosphere Packaging or Storage	354
Primary Effects of CO ₂ on Microorganisms	354
Mode of Action	354
Food Products	356
Fresh and Processed Meats	356
Poultry	358
Seafoods	358
The Safety of Map Foods	359
Other Pathogens	362
Spoilage of Map and Vacuum-packaged Meats	363
Volatile Components of Vacuum-Packaged Meats and Poultry	365
15—Radiation Protection of Foods, and Nature of Microbial Radiation Resistance	371
Characteristics of Radiations of Interest in Food Preservation	372
Ultraviolet Light	372
Beta Rays	372
Gamma Rays	372
X-Rays	373
Microwaves	373
Principles Underlying The Destruction of Microorganisms	
by Irradiation	373
Types of Organisms	373
Numbers of Organisms	374
Composition of Suspending Menstruum (Food)	374
Presence or Absence of Oxygen	374
Physical State of Food	375
Age of Organisms	375
Processing of Foods for Irradiation	375
Selection of Foods	375
Cleaning of Foods	375
Packaging	375

Blanching or Heat Treatment	375
Application of Radiation	376
Gamma Radiation	376
Electron Beams/Accelerated Electrons	377
Radappertization, Radicidation, and Radurization of Foods	377
Definitions	377
Radappertization	378
Radicidation	382
Seed sprouts and other vegetables	383
Radurization	383
Legal Status of Food Irradiation	384
Effect of Irradiation on Food Quality	385
Storage Stability of Irradiated Foods	387
Nature of Radiation Resistance of Microorganisms	387
Biology of Extremely Resistant Species	388
Apparent Mechanisms of Resistance	390
16—Protection of Foods with Low-Temperatures	395
Definitions	395
Temperature Growth Minima	396
Preparation of Foods for Freezing	396
Freezing of Foods and Freezing Effects	399
Storage Stability of Frozen Foods	399
Effect of Freezing on Microorganisms	401
Effect of Thawing	403
Some Characteristics of Psychrotrophs and Psychrophiles	404
The Effect of Low Temperatures on Microbial	
Physiologic Mechanisms	406
Nature of The Low Heat Resistance	
of Psychrotrophs/Psychrophiles	409
17—Food Protection with High Temperatures	415
Factors Affecting Heat Resistance of Microorganisms	416
Water	416
Fat	416
Salts	417
Carbohydrates	418
pH	418
Proteins and Other Substances	419
Numbers of Organisms	419
Age of Organisms	420
Growth Temperature	421
Inhibitory Compounds	421
Time and Temperature	421
Effect of Ultrasonics	422
Relative Heat Resistance of Microorganisms	422
Spore Resistance	422

Thermal Destruction of Microorganisms	423
Thermal Death Time	424
<i>D</i> Value	425
<i>z</i> Value	426
<i>F</i> Value	428
Thermal Death Time Curve	428
12-D Concept	429
Some Characteristics of Thermophiles	429
Enzymes	430
Ribosomes	432
Flagella	432
Other Characteristics of Thermophilic Microorganisms	432
Nutrient Requirements	432
Oxygen Tension	433
Cellular Lipids	433
Cellular Membranes	434
Effect of Temperature	434
Genetics	435
Canned Food Spoilage	435
Low Acid (pH > 4.6)	435
Acid (pH 3.7–4.0 to 4.6)	435
High Acid (pH < 4.0–3.7)	436
18—Protection of Foods by Drying	443
Preparation and Drying of Low-Moisture Foods	443
Effect of Drying on Microorganisms	445
Storage Stability of Dried Foods	447
Intermediate-Moisture Foods	447
Preparation of IMF	448
Microbial Aspects of IMF	452
Storage Stability of IMF	453
IMF and Glass Transition	454
19—Other Food Protection Methods	457
High Hydrostatic Pressures (HHP, HPP)	457
Some Principles and Effects of HHP on Foods and Organisms	458
Effects of HHP on Specific Foodborne Organisms	459
Pulsed Electric Fields	463
Aseptic Packaging	466
Manothermosonication (Thermoultrasonication)	467
Part VI—INDICATORS OF FOOD SAFETY AND QUALITY, PRINCIPLES OF QUALITY CONTROL, AND MICROBIOLOGICAL CRITERIA	471
20—Indicators of Food Microbial Quality and Safety	473
Some Indicators of Product Quality	473
Indicators of Food Safety	475

Coliforms	476
Enterococci	481
Bifidobacteria	485
Coliphages/Enteroviruses	487
The Possible Overuse of Fecal Indicator Organisms	489
Predictive Microbiology/Microbial Modeling	491
21—The HACCP and FSO Systems for Food Safety	497
Hazard Analysis Critical Control Point (HACCP) System	497
Prerequisite Programs	498
Definitions	498
HACCP Principles	499
Flow Diagrams	503
Application of HACCP Principles	503
Some Limitations of HACCP	506
Food Safety Objective (FSO)	506
Microbiological Criteria	506
Definitions	507
Sampling Plans	508
Microbiological Criteria and Food Safety	509
Microbiological Criteria for Various Products	511
Other Criteria/Guidelines	512
Part VII—FOODBORNE DISEASES	517
22—Introduction to Foodborne Pathogens	519
Introduction	519
Foodborne Illness Cases in the United States	519
The Fecal–Oral Transmission of Foodborne Pathogens	522
Host Invasion	522
“Universal” Requirements	522
Attachment Sites	524
Quorum Sensing	524
Biofilms	527
Apparent Role of Quorum Sensing	529
Sigma (δ) Factors	529
Alternative Sigma Factors	529
Pathogenesis	532
Gram-Positive Bacteria	532
Gram-Negative Bacteria	533
Summary	538
23—Staphylococcal Gastroenteritis	545
Species of Concern in Foods	545
Habitat and Distribution	547
Incidence in Foods	548
Nutritional Requirements for Growth	548

Temperature Growth Range	548
Effect of Salts and Other Chemicals	548
Effect of pH, Water Activity, and Other Parameters	549
NaCl and pH	549
pH, a_w , and Temperature	549
NaNO ₂ , Eh, pH, and Temperature of Growth	550
Staphylococcal Enterotoxins: Types and Incidence	550
Chemical and Physical Properties	552
Production	554
Mode of Action	557
The Gastroenteritis Syndrome	558
Incidence and Vehicle Foods	559
Ecology of <i>S. aureus</i> Growth	560
Prevention of Staphylococcal and Other Food-Poisoning Syndromes	560
24—Food Poisoning Caused by Gram-Positive Sporeforming Bacteria	567
<i>Clostridium Perfringens</i> Food Poisoning	567
Distribution of <i>C. perfringens</i>	568
Characteristics of the Organism	568
The Enterotoxin	570
Vehicle Foods and Symptoms	571
Prevention	572
Botulism	573
Distribution of <i>C. botulinum</i>	574
Growth of <i>C. botulinum</i> Strains	576
Ecology of <i>C. botulinum</i> Growth	578
Concerns for Sous Vide and Related Food Products	579
Nature of the Botulinal Neurotoxins	580
The Adult Botulism Syndrome: Incidence and Vehicle Foods	581
Infant Botulism	582
<i>Bacillus Cereus</i> Gastroenteritis	583
<i>B. cereus</i> Toxins	583
Diarrheal Syndrome	584
Emetic Syndrome	585
25—Foodborne Listeriosis	591
Taxonomy of <i>Listeria</i>	591
Serotypes	594
Subspecies Typing	594
Growth	595
Effect of pH	595
Combined Effect of pH and NaCl	596
Effect of Temperature	597
Effect of a_w	598
Distribution	598
The Environment	598
Foods and Humans	598

Prevalence	600
Thermal Properties	600
Dairy Products	601
Nondairy Products	602
Effect of Sublethal Heating on Thermotolerance	603
Virulence Properties	603
Listeriolysin O and Ivanolysin O	603
Intracellular Invasion	604
Monocytosis-Producing Activity	604
Sphingomyelinase	605
Animal Models and Infectious Dose	605
Incidence and Nature of The Listeriosis Syndromes	606
Incidence	606
Source of Pathogens	607
Syndromes	609
Resistance to Listeriosis	609
Persistence of <i>L. monocytogenes</i> in Foods	610
Regulatory Status of <i>L. monocytogenes</i> in Foods	611
26—Foodborne Gastroenteritis Caused by <i>Salmonella</i> and <i>Shigella</i>	619
Salmonellosis	619
Serotyping of <i>Salmonella</i>	620
Distribution	620
Growth and Destruction of Salmonellae	623
The <i>Salmonella</i> Food-Poisoning Syndrome	625
<i>Salmonella</i> Virulence Properties	625
Incidence and Vehicle Foods	625
Prevention and Control of Salmonellosis	629
Competitive Exclusion to Reduce Salmonellae Carriage in Poultry	629
Shigellosis	631
Foodborne Cases	634
Virulence Properties	634
27—Foodborne Gastroenteritis Caused by <i>Escherichia coli</i>	637
Serological Classification	637
The Recognized Virulence Groups	637
Enteraggregative <i>E. coli</i> (EAggEC)	637
Enterohemorrhagic <i>E. coli</i> (EHEC)	639
Enteroinvasive <i>E. coli</i> (EIEC)	647
Enteropathogenic <i>E. coli</i> (EPEC)	648
Enterotoxigenic <i>E. coli</i> (ETEC)	648
Prevention	650
Travelers' Diarrhea	650
28—Foodborne Gastroenteritis Caused by <i>Vibrio</i>, <i>Yersinia</i>, and <i>Campylobacter</i> Species	657
Vibriosis (<i>Vibrio parahaemolyticus</i>)	657
Growth Conditions	657

Virulence Properties	659
Gastroenteritis Syndrome and Vehicle Foods	660
Other Vibrios	661
<i>Vibrio cholerae</i>	661
<i>Vibrio vulnificus</i>	663
<i>Vibrio alginolyticus</i> and <i>V. hollisae</i>	664
Yersiniosis (<i>Yersinia enterocolitica</i>)	664
Growth Requirements	665
Distribution	666
Serovars and Biovars	666
Virulence Factors	667
Incidence of <i>Y. enterocolitica</i> in Foods	668
Gastroenteritis Syndrome and Incidence	668
Campylobacteriosis (<i>Campylobacter jejuni</i>)	668
Distribution	669
Virulence Properties	670
Enteritis Syndrome and Prevalence	671
Prevention	671
29—Foodborne Animal Parasites	679
Protozoa	679
Giardiasis	680
Amebiasis	682
Toxoplasmosis	683
Distribution of <i>T. gondii</i>	684
Sarcocystosis	686
Cryptosporidiosis	687
Cyclosporiasis	689
Flatworms	690
Fascioliasis	691
Fasciolopsiasis	691
Paragonimiasis	692
Clonorchiasis	692
Diphyllbothriasis	693
Cysticercosis/Taeniasis	695
Roundworms	696
Trichinosis	697
Anisakiasis	702
30—Mycotoxins	709
Aflatoxins	709
Requirements for Growth and Toxin Production	710
Production and Occurrence in Foods	711
Relative Toxicity and Mode of Action	713
Degradation	714
<i>Alternaria</i> Toxins	715
Citrinin	715

Ochratoxins	716
Patulin	716
Penicillic Acid	717
Sterigmatocystin	717
Fumonisin	718
Growth and Production	718
Prevalence in Corn and Feeds	719
Physical/Chemical Properties of FB ₁ and FB ₂	719
Pathology	720
Sambutoxin	721
Zearalenone	722
Control of Production	722
31—Viruses and Some Other Proven and Suspected Foodborne Biohazards	727
Viruses	727
Incidence in Foods and the Environment	728
Destruction in Foods	728
Hepatitis A Virus	729
Noroviruses	730
Rotaviruses	731
Bacteria	732
<i>Enterobacter sakazakii</i>	732
Histamine-Associated (Scombroid) Poisoning	732
Prion Diseases	737
Bovine spongiform encephalopathy (BSE)	737
Creutzfeldt-Jakob Diseases (CJD, vCJD)	738
Chronic wasting disease (CWD)	739
Toxicogenic Phytoplanktons	739
Paralytic Shellfish Poisoning	739
Ciguatera Poisoning	740
Domoic Acid	740
Appendix	747
Index	751
