

Wiley Series in Microwave and Optical Engineering
Kai Chang, Series Editor

 WILEY

Applied Electromagnetics and Electromagnetic Compatibility

Dipak L. Sengupta
Valdis V. Liepa

CONTENTS

Preface	xvii
Acknowledgments	xxi
1 General Considerations	1
1.1 Introduction	1
1.2 Definitions	2
1.3 Interference mechanisms	3
1.4 Examples	6
1.5 Discussion	7
References	7
2 The Electromagnetic Environment	9
2.1 Introduction	9
2.2 Natural Noise	10
2.3 Man-Made Noise	10
	vii

2.4	CW and Transient Sources	10
2.5	Characteristic Parameters of Authorized Radiators	12
2.6	Noise Emission Intensity	12
2.7	Home Environment	16
2.8	Discussion of Noise Sources	16
2.9	Subject Matter of the Book	18
	References	18
3	Fundamentals of Fields and Waves	21
3.1	Introduction	21
3.2	Basic Parameters	22
3.3	Time Dependent Relations	23
3.3.1	Continuity of Current and Conservation of Charge	23
3.3.2	Faraday's Law	25
3.3.3	Ampère's Circuital Law	28
3.3.4	Lorentz Force Law	30
3.3.5	Maxwell's Equations	30
3.3.6	Historical Comments on Maxwell's Equations	32
3.3.7	Media Considerations	33
3.3.8	Boundary Conditions	36
3.3.9	Energy Flow and Poynting's Theorem	45
3.3.10	Uniqueness Theorem	49
3.4	Harmonically Oscillating Fields	49
3.4.1	Introduction	49
3.4.2	Phasors	49
3.4.3	Time Harmonic Relations	51
3.4.4	Complex Permittivity	54
3.4.5	Boundary Conditions Again	57
3.4.6	Notes on the Solution	59
3.4.7	The Complex Poynting Theorem	62
3.5	The Wave Equation	66
3.5.1	Time Dependent Case	66
3.5.2	Time Harmonic Case	68
3.6	Uniform Plane Waves	69
3.6.1	General Considerations	69
3.6.2	Energy Considerations	73

3.6.3	Group Velocity	75
3.6.4	Summary	76
3.6.5	General Representation of TEM Waves	77
3.6.6	Plane Waves in Lossy Media	82
3.6.7	Skin Effect	86
3.6.8	Polarization of Plane Waves	91
3.7	Reflection and Refraction (Transmission) of Plane Waves	94
3.7.1	Normal Incidence on a Plane Interface	94
3.7.2	Oblique Incidence	100
	References	113
	Problems	114
4	Signal Waveform and Spectral Analysis	117
4.1	Introduction	117
4.2	Classification of Signals	118
4.3	Energy Signals	119
4.3.1	Definitions	119
4.3.2	A Rectangular Pulse	120
4.4	Power Signals	124
4.4.1	Periodic Signals	125
4.4.2	Trapezoidal Waveform	129
4.5	Examples of Some Signals	132
	References	134
	Problems	134
5	Transmission Lines	139
5.1	Introduction	139
5.2	Basic Discussion	140
5.3	Transverse Electromagnetic (TEM) Transmission Lines	141
5.4	Telegrapher's Equations: Quasi-Lumped Circuit Model	143
5.5	Wave Equations	145
5.6	Frequency Domain Analysis	146
5.6.1	General Solution	146
5.6.2	Further Discussion of Propagation Constant and Characteristic Impedance	148
5.6.3	Voltage, Current, and Impedance Relations	149

5.7	Line Parameters	163
5.7.1	Coaxial Line	163
5.7.2	Parallel Wire Line	165
5.7.3	Parallel Plate Line	168
5.7.4	Circular Wire above a Ground Plane	169
5.7.5	Microstrip Line	170
5.7.6	Stripline	174
5.7.7	Comments	177
5.8	Transients on Transmission Lines	181
5.8.1	Initial and Final (Steady State) Values	181
5.8.2	Transient Values	183
5.9	Measurements	189
5.9.1	Slotted Line Measurements	189
5.9.2	Network Analyzer Measurement	190
	References	191
	Problems	191

6 Antennas and Radiation 195

6.1	Introduction	195
6.2	Potential Functions	196
6.3	Radiation from a Short Current Element	200
6.3.1	Complete Fields	200
6.3.2	Near Zone and Far Zone Considerations	204
6.3.3	Near Zone and Far Zone Fields	206
6.3.4	Radiated Power and Radiation Pattern	208
6.3.5	Wave Impedance	212
6.4	Radiation from a Small Loop of Current	212
6.4.1	Complete Fields	213
6.4.2	Far Zone Fields	216
6.4.3	Radiated Power	217
6.4.4	Wave Impedance	218
6.5	Fundamental Antenna Parameters	218
6.5.1	Radiation Intensity	218
6.5.2	Directivity and Gain	221
6.6	Far Fields of Arbitrary Current Distributions	224
6.6.1	The Radiation Vector and the Far Fields	225

6.6.2	Vector Effective Length of an Antenna	228
6.6.3	Summary	230
6.7	Linear Antennas	231
6.7.1	Center-Fed Linear Antenna	231
6.7.2	Far Fields of a Dipole of Length ℓ	233
6.7.3	Radiated Power and Directivity	235
6.7.4	Cosine, Sine, and Modified Cosine Integrals	236
6.7.5	The Half-Wave Dipole	238
6.8	Near Field and Far Field Regions	241
6.8.1	Basic Assumptions	241
6.8.2	Point or Small Sources	242
6.8.3	Extended Sources	243
6.8.4	Definitions of Various Regions	244
6.8.5	Specific Values of the Region Boundaries	245
6.9	Equivalent Circuits of Antennas	248
6.9.1	Transmitting Antenna	249
6.9.2	Receiving Antennas	251
6.9.3	Equivalent Area	253
6.10	Antenna Arrays	256
6.10.1	General Considerations	256
6.10.2	A Two-Element Array	259
6.11	Antennas Above Ground	263
6.11.1	Ground and Ground Plane	264
6.11.2	Image Theory	265
6.11.3	Images of Electric Current Elements above Perfect Ground	266
6.11.4	Dipoles above Ground	267
6.11.5	Monopole Antennas	272
6.12	Biconical Antenna	273
6.12.1	Biconical Transmission Line	273
6.12.2	Finite Biconical Antenna	278
	References	280
	Problems	281
7	Behavior of Circuit Components	285
7.1	Introduction	285
7.2	The Series RLC Circuit	286

7.3	Definitions of Lumped Circuit Parameters R , L , and C	289
7.3.1	Circuit Theory Description	289
7.3.2	Field Theory Description	290
7.4	Round Wires	293
7.4.1	Resistance	295
7.4.2	Internal Inductance	296
7.5	External Inductance of Round Wire Configurations	298
7.5.1	General Relations	298
7.5.2	Circular Loops	301
7.6	Inductance of Straight Wires	305
7.6.1	Partial Inductance	305
7.6.2	Inductance of a Closed Rectangular Loop	308
7.7	Other Configurations	310
7.7.1	Printed Circuit Board (PCB) Lines	310
7.7.2	Microstrip, Strip, and Coplanar Lines	312
7.8	Behavior of Circuit Elements	314
7.8.1	Bode Plots	314
7.8.2	Resistors	318
7.8.3	Capacitors	320
7.8.4	Inductors	324
	References	331
	Problems	332
8	Radiated Emissions and Susceptibility	335
8.1	Introduction	335
8.2	Main Requirements	336
8.3	Emissions from Linear Elements	336
8.4	Two Parallel Currents	338
8.4.1	Introduction	338
8.4.2	Two Parallel Currents	339
8.5	Transmission Line Models for Susceptibility	343
8.5.1	Introduction	343
8.5.2	Voltage Induced on the Two-Wire Transmission Line	345
	References	349
9	Electromagnetic Shielding	351

9.1	Introduction	351
9.2	Definitions	352
9.3	Shielding Effectiveness	353
9.3.1	Introduction	353
9.3.2	SE Expressions for Computation	355
9.4	Shielding Effectiveness: Near Field Illumination	357
9.4.1	Electric and Magnetic Sources	358
9.4.2	SE Expressions: Near Zone Considerations	361
9.5	Discussion	363
9.5.1	Far Zone Fields	364
9.5.2	Near Zone Fields	364
	References	364
10	Coupling between Devices	365
10.1	Introduction	365
10.2	Capacitive (Electric) Coupling [1,3]	366
10.3	Magnetic (Inductive) Coupling	368
10.3.1	Some Basic Concepts	369
10.3.2	Shielding of the Receptor Conductor	370
	References	375
11	Electrostatic Discharge (ESD)	377
11.1	Introduction	377
11.2	Accumulation of Static Charge on Bodies	378
11.3	Charging and Charge Separation	379
11.4	Human Body as Source of ESD	381
11.5	ESD Waveforms	385
11.6	Human Body Circuit Model	388
11.7	ESD Generator and ESD Test	389
	References	389
12	EMC Standards	391
12.1	Introduction	391
12.2	Current US Standards	392
12.2.1	Introduction	392
12.2.2	FCC Radiated Emission Limits for Digital Devices	393

12.2.3	FCC Conducted Emission Limits for Digital Devices	396
12.3	EMI/EMC Standards: Non-US Countries	396
12.3.1	CISPR Standards	396
12.3.2	European Norms	397
	References	398

13 Measurements of Emission **399**

13.1	Introduction	399
13.2	General	400
13.3	Radiated Emissions	400
13.3.1	Introduction	400
13.3.2	Receiver	401
13.3.3	Antennas	401
13.3.4	Some Results	404
13.4	Conducted Emissions	404
13.4.1	Introduction	404
13.4.2	Noise on Power Supply Lines	405
13.4.3	Transients on Power Supply Lines	405
13.4.4	Conducted Emissions from a DUT	407
13.4.5	Some Results	408
	References	409

Appendix A: Vectors and Vector Analysis **411**

A.1	Introduction	411
A.2	Definitions of Scalar and Vector Fields	412
A.2.1	Scalar Fields	412
A.2.2	Vector Fields	412
A.3	Vector Algebra	412
A.3.1	Definitions	412
A.3.2	Addition and Subtraction of Vectors	414
A.3.3	Multiplication of a Vector by a Scalar Quantity	416
A.3.4	Unit Vectors	416
A.3.5	Vector Displacement and Components of a Vector	417
A.4	Vector Surface Element	423
A.5	Product of Vectors	424
A.5.1	Dot Product of Two Vectors	424

A.5.2	The Cross Product of Two Vectors	429
A.5.3	Product of Three Vectors	431
A.6	Coordinate Systems	433
A.6.1	Three Basic Coordinate Systems	434
A.6.2	Space Variables and Base Vectors	435
A.7	Elementary Differential Relations	437
A.7.1	Rectangular System	437
A.7.2	Cylindrical and Spherical Systems	437
A.8	Transformation of Unit Vectors	438
A.9	Vector Calculus	439
A.9.1	Time Derivative of Vector \mathbf{A}	440
A.9.2	Space Derivatives of a Vector \mathbf{A}	441
A.9.3	Gradient of a Scalar Function	441
A.9.4	Flux of a Vector	446
A.9.5	Divergence of a Vector \mathbf{A}	447
A.9.6	Curl of a Vector Function	450
A.10	The Laplacian $\nabla^2 \equiv \nabla \cdot \nabla$	456
A.11	Comments on Notation	457
A.12	Some Useful Relations	458
A.12.1	Vector Algebra	458
A.12.2	Vector Identities	458
A.12.3	Integral Relations	459
	References	462
	Problems	463
Appendix B: Frequency Band Designations		467
Appendix C: Constitutive Relations		473
Index		479
