PART I GIS and Basic Spatial Analysis Tasks

Chapter 1	Getting Started with ArcGIS: Data Management and Basic Spatial Analysis Tools.....	1
1.1	Spatial and Attribute Data Management in ArcGIS.....	1
1.1.1	Map Projections and Spatial Data Models.....	2
1.1.2	Attribute Data Management and Attribute Join.....	3
1.2	Case Study 1A: Mapping the Population Density Pattern in Cuyahoga County, Ohio.....	4
1.3	Spatial Analysis Tools in ArcGIS: Queries, Spatial Joins, and Map Overlays.....	8
1.4	Case Study 1B: Extracting Census Tracts in the City of Cleveland and Analyzing Polygon Adjacency.....	12
1.4.1	Part 1: Extracting Census Tracts in Cleveland.....	12
1.4.2	Part 2: Identifying Contiguous Polygons.....	14
1.5	Summary.....	15
	Appendix 1: Importing and Exporting ASCII Files in ArcGIS.....	17
	Notes.....	18
Chapter 2	Measuring Distances and Time.....	19
2.1	Measures of Distance.....	19
2.2	Computing Network Distance and Time.....	21
2.2.1	Label-Setting Algorithm for the Shortest-Route Problem.....	21
2.2.2	Measuring Network Distance or Time in ArcGIS.....	23
2.3	Case Study 2: Measuring Distance between Counties and Major Cities in Northeast China.....	24
2.3.1	Part 1: Measuring Euclidean and Manhattan Distances.....	24
2.3.2	Part 2: Measuring Travel Distances.....	26
2.3.3	Part 3: Measuring Travel Time (Optional).....	31
2.4	Summary.....	31
	Appendix 2: The Valued-Graph Approach to the Shortest-Route Problem.....	31
	Notes.....	33
Chapter 3	Spatial Smoothing and Spatial Interpolation.....	35
3.1	Spatial Smoothing.....	35
3.1.1	Floating Catchment Area Method.....	36
3.1.2	Kernel Estimation.....	37

3.2	Case Study 3A: Analyzing Tai Place-Names in Southern China by Spatial Smoothing	38
3.2.1	Part 1: Spatial Smoothing by the Floating Catchment Area Method	38
3.2.2	Part 2: Spatial Smoothing by Kernel Estimation	41
3.3	Point-Based Spatial Interpolation	42
3.3.1	Global Interpolation Methods	42
3.3.2	Local Interpolation Methods	43
3.4	Case Study 3B: Surface Modeling and Mapping of Tai Place-Names in Southern China	45
3.4.1	Part 1: Surface Mapping by Trend Surface Analysis	45
3.4.2	Part 2: Mapping by Local Interpolation Methods	46
3.5	Area-Based Spatial Interpolation	47
3.6	Case Study 3C: Aggregating Data from Census Tracts to Neighborhoods and School Districts in Cleveland, Ohio	48
3.6.1	Part 1: Simple Aggregation from Census Tracts to Neighborhoods in the City of Cleveland	49
3.6.2	Part 2: Areal Weighting Aggregation from Census Tracts to School Districts in Cuyahoga County	49
3.7	Summary	51
	Appendix 3: Empirical Bayes (EB) Estimation for Spatial Smoothing	52
	Notes	53

PART II Basic Quantitative Methods and Applications

Chapter 4	GIS-Based Trade Area Analysis and Applications in Business Geography and Regional Planning	55
4.1	Basic Methods for Trade Area Analysis	56
4.1.1	Analog Method and Regression Model	56
4.1.2	Proximal Area Method	56
4.2	Gravity Models for Delineating Trade Areas	57
4.2.1	Reilly's Law	57
4.2.2	Huff Model	59
4.2.3	Link between Reilly's Law and Huff Model	60
4.2.4	Extensions to the Huff Model	61
4.2.5	Deriving the β Value in the Gravity Models	62
4.3	Case Study 4A: Defining Fan Bases of Chicago Cubs and White Sox	63
4.3.1	Part 1: Defining Fan Base Areas by the Proximal Area Method	65
4.3.2	Part 2: Defining Fan Base Areas and Mapping Probability Surface by the Huff Model	66
4.3.3	Discussion	68
4.4	Case Study 4B: Defining Hinterlands of Major Cities in Northeast China	68

- 4.4.1 Part 1: Defining Proximal Areas by Railroad Distances.....69
- 4.4.2 Part 2: Defining Hinterlands by the Huff Model69
- 4.4.3 Discussion71
- 4.5. Concluding Remarks71
- Appendix 4: Economic Foundation of the Gravity Model.....73
- Notes75

Chapter 5 GIS-Based Measures of Spatial Accessibility and Application in Examining Health Care Access77

- 5.1 Issues on Accessibility77
- 5.2 The Floating Catchment Area Methods79
 - 5.2.1 Earlier Versions of Floating Catchment Area Method79
 - 5.2.2 Two-Step Floating Catchment Area (2SFCA) Method80
- 5.3 The Gravity-Based Method82
 - 5.3.1 Gravity-Based Accessibility Index82
 - 5.3.2 Comparison of the 2SFCA and Gravity-Based Methods.....83
- 5.4 Case Study 5: Measuring Spatial Accessibility to Primary Care Physicians in the Chicago Region84
 - 5.4.1 Part 1: Implementing the 2SFCA Method85
 - 5.4.2 Part 2: Implementing the Gravity-Based Model89
- 5.5 Discussion and Remarks91
- Appendix 5: A Property for Accessibility Measures95
- Notes96

Chapter 6 Function Fittings by Regressions and Application in Analyzing Urban and Regional Density Patterns.....97

- 6.1 The Density Function Approach to Urban and Regional Structures97
 - 6.1.1 Studies on Urban Density Functions97
 - 6.1.2 Studies on Regional Density Functions.....99
- 6.2 Function Fittings for Monocentric Models101
 - 6.2.1 Four Simple Bivariate Functions101
 - 6.2.2 Other Monocentric Functions102
 - 6.2.3 GIS and Regression Implementations102
- 6.3 Nonlinear and Weighted Regressions in Function Fittings105
- 6.4 Function Fittings for Polycentric Models.....107
 - 6.4.1 Polycentric Assumptions and Corresponding Functions.....107
 - 6.4.2 GIS and Regression Implementations110
- 6.5 Case Study 6: Analyzing Urban Density Patterns in the Chicago Region ...110
 - 6.5.1 Part 1: Function Fittings for Monocentric Models (Census Tracts).....111
 - 6.5.2 Part 2: Function Fittings for Polycentric Models (Census Tracts).....115
 - 6.5.3 Part 3: Function Fittings for Monocentric Models (Townships)116
- 6.6 Discussion and Summary.....117

Appendix 6A: Deriving Urban Density Functions	120
Mills–Muth Economic Model.....	120
Gravity-Based Model.....	121
Appendix 6B: OLS Regression for a Linear Bivariate Model.....	121
Appendix 6C: Sample SAS Program for Monocentric Function Fittings	123
Notes	124
Chapter 7 Principal Components, Factor, and Cluster Analyses, and Application in Social Area Analysis.....	127
7.1 Principal Components and Factor Analysis.....	127
7.1.1 Principal Components Factor Model.....	128
7.1.2 Factor Loadings, Factor Scores, and Eigenvalues.....	129
7.1.3 Rotation	130
7.2 Cluster Analysis	131
7.3 Social Area Analysis	134
7.4 Case Study 7: Social Area Analysis in Beijing.....	135
7.5 Discussion and Summary.....	143
Appendix 7A: Discriminant Function Analysis.....	145
Appendix 7B: Sample SAS Program for Factor and Cluster Analyses	146
Notes	147

PART III Advanced Quantitative Methods and Applications

Chapter 8 Geographic Approaches to Analysis of Rare Events in Small Population and Application in Examining Homicide Patterns	149
8.1 The Issue of Analyzing Rare Events in a Small Population.....	149
8.2 The ISD and the Spatial-Order Methods.....	150
8.3 The Scale-Space Clustering Method	152
8.4 Case Study 8: Examining the Relationship between Job Access and Homicide Patterns in Chicago at Multiple Geographic Levels Based on the Scale-Space Melting Method	155
8.5 Summary	163
Appendix 8: The Poisson-Based Regression Analysis	164
Notes	165
Chapter 9 Spatial Cluster Analysis, Spatial Regression, and Applications in Toponymical, Cancer, and Homicide Studies	167
9.1 Point-Based Spatial Cluster Analysis	168
9.1.1 Point-Based Tests for Global Clustering	168
9.1.2 Point-Based Tests for Local Clusters	168
9.2 Case Study 9A: Spatial Cluster Analysis of Tai Place-Names in Southern China.....	170

9.3	Area-Based Spatial Cluster Analysis	172
9.3.1	Defining Spatial Weights	172
9.3.2	Area-Based Tests for Global Clustering	172
9.3.3	Area-Based Tests for Local Clusters	173
9.4	Case Study 9B: Spatial Cluster Analysis of Cancer Patterns in Illinois	175
9.5	Spatial Regression	181
9.6	Case Study 9C: Spatial Regression Analysis of Homicide Patterns in Chicago	182
9.6.1	Part 1: Spatial Regression Analysis at the Census Tract Level by GeoDa	183
9.6.2	Part 2: Spatial Regression Analysis at the Community Area Level by GeoDa	185
9.6.3	Discussion	185
9.7	Summary	187
	Appendix 9: Spatial Filtering Methods for Regression Analysis	187
	Notes	188

Chapter 10 Linear Programming and Applications in Examining Wasteful
Commuting and Allocating Health Care Providers..... 189

10.1	Linear Programming (LP) and the Simplex Algorithm	190
10.1.1	The LP Standard Form	190
10.1.2	The Simplex Algorithm	190
10.2	Case Study 10A: Measuring Wasteful Commuting in Columbus, Ohio	193
10.2.1	The Issue of Wasteful Commuting and Model Formulation	193
10.2.2	Data Preparation in ArcGIS	194
10.2.3	Measuring Wasteful Commuting in SAS	197
10.3	Integer Programming and Location-Allocation Problems	199
10.3.1	General Forms and Solutions	199
10.3.2	Location-Allocation Problems	200
10.4	Case Study 10B: Allocating Health Care Providers in Cuyahoga County, Ohio	203
10.4.1	Part 1: Polygon-Based Analysis	203
10.4.2	Part 2: Network-Based Analysis	207
10.5	Discussion and Summary.....	212
	Appendix 10A: Hamilton's Model on Wasteful Commuting	213
	Appendix 10B: SAS Program for the LP Problem of Measuring Wasteful Commuting	214
	Notes	217

Chapter 11 Solving a System of Linear Equations and Application in
Simulating Urban Structure

11.1	Solving a System of Linear Equations	219
11.2	The Garin-Lowry Model	221
11.2.1	Basic vs. Nonbasic Economic Activities	221
11.2.2	The Model's Formulation	222
11.2.3	An Illustrative Example	224

11.3 Case Study 11: Simulating Population and Service Employment	
Distributions in a Hypothetical City.....	225
11.3.1 Task 1: Computing Network Distances (Times) in ArcGIS	226
11.3.2 Task 2: Simulating Distributions of Population and Service Employment in the Basic Case	227
11.3.3 Task 3: Examining the Impact of Basic Employment Pattern.....	229
11.3.4 Task 4: Examining the Impact of Travel Friction Coefficient	229
11.3.5 Task 5: Examining the Impact of the Transportation Network	230
11.4 Discussion and Summary.....	230
Appendix 11A: The Input–Output Model.....	231
Appendix 11B: Solving a System of Nonlinear Equations	232
Appendix 11C: FORTRAN Program for Solving the Garin–Lowry Model.....	234
References	243
Index.....	253
Related Titles.....	265
