

RODNEY BOYER

THIRD
EDITION

CONCEPTS IN

BIOCHEMISTRY

CONTENTS

Part I Molecules and Life

1 Biochemistry: From Atoms to Molecules to Cells 1

- 1.1 The Roots of Biochemistry 4
 - Early History of Biochemistry 4
 - The Road to Modern Biochemistry 5
- 1.2 All Living Matter Contains C, H, O, N, P, and S 8
 - Chemical Elements in Biomolecules 8
 - Combining Elements into Compounds 10

Just in Time Review Important Functional Groups in Biochemistry 11

- 1.3 Biological Macromolecules 12
 - Cellular Reactions 12
- 1.4 Organelles, Cells, and Organisms 14
 - Viruses 14
 - Living Cells 16
 - Prokaryotic Cells 16

Window on Biochemistry 1-1 Extremophiles—Living Life on the Edge 18

- Eukaryotic Cells 21

- 1.5 Storage and Transfer of Biological Information—A Preview 23
 - Biological Information 23

Just in Time Review Biochemistry Comes in All Sizes S, M, L, and XL 24

- The DNA Molecule 25
- DNA → DNA 27
- DNA → RNA 27
- mRNA → Proteins 28
- The Genetic Code 29
- Eukaryotic DNA: Exons and Introns 29
- DNA Mutations 29

Window on Biochemistry 1-2 Capturing and Handling Cell Components 31

Biochemistry in the Clinic 1-1 Obesity 32

Summary 33 / Study Exercises 33 / Further Reading 35

2 Biomolecules in Water 36

- 2.1 Water, the Biological Solvent 38
 - Noncovalent Interactions in Biomolecules 38
 - Examples of Noncovalent Interactions 38
 - Characteristics of Noncovalent Interactions 40
 - The Structure of Water 40
 - The Importance of Hydrogen Bonds 41
- 2.2 Hydrogen Bonding and Solubility 42
 - Physical Properties of Water 42
 - Water as a Solvent 43

2.3 Cellular Reactions of Water 47

Ionization of Water 47

Just in Time Review Using pH to Define Hydrogen Ion Concentration 48

pH and pK 49

Titration Curves 51

The Henderson-Hasselbalch Equation 52

Drug Efficacy Depends on Water Solubility 54

2.4 Buffer Systems 55

Maintaining a Constant pH 55

Effective Buffering Range 55

Laboratory Buffers 56

Window on Biochemistry 2-1 Buffers in Blood and Other Cellular Fluids 57

Biochemistry in the Clinic 2-1 Aspirin Overdose and Salicylate Poisoning 58

Summary 59 / Study Exercises 59 / Further Reading 62

3 Amino Acids, Peptides, and Proteins 63

3.1 The Amino Acids in Proteins 64

Properties of α -Amino Acids 64

Classification of Amino Acids 69

Window on Biochemistry 3-1 Identifying the 21st and 22nd

Standard Amino Acids 72

Reactivity and Analysis of Amino Acids 72

3.2 Polypeptides and Proteins 74

Window on Biochemistry 3-2 Bacteria Use Amino Acids to Gather a Crowd 75

3.3 Protein Function 78

Enzymes 79

Structural Proteins 79

Immune Proteins 79

Transport and Storage Proteins 79

Regulatory and Receptor Proteins 80

Muscle Contraction and Mobility Proteins 80

3.4 Structural Properties of Proteins 80

Molecular Mass 80

Defining Protein Composition and Behavior 81

Four Levels of Protein Structure 82

3.5 Studying Protein Structure and Function 84

Proteomics 84

Isolating and Purifying Proteins 84

Determination of Primary Structure 86

Sequencing DNA 89

Importance of Protein Sequence Data 89

Biochemistry in the Clinic 3-1 Monosodium Glutamate—The Taste of Umami 90

Summary 91 / Study Exercises 92 / Further Reading 94

4 Protein Architecture and Biological Function 95

4.1 General Principles of Protein Design 96

Influence of Primary Sequence 96

Noncovalent Interactions 98

Structure of Peptide Bonds 99

4.2 Elements of Secondary Structure 100

The α -Helix 101

β -Sheets 102

Bends and Loops 102

Supersecondary Structure 104

Fibrous Proteins 105

4.3 Protein Tertiary Structure 107

Elements of Tertiary Structure 107

The Protein Folding Process 108

Folding Accessory Proteins 109

Protein Unfolding 110

Window on Biochemistry 4-1 Misadventures in Protein Folding and Disease 111

4.4 Protein Quaternary Structure 112

Monomeric and Oligomeric Proteins 112

4.5 Protein Structure and Biological Function 113

Hemoglobin 114

Window on Biochemistry 4-2 How Do Hemoglobin and Myoglobin Tell the Difference Between O_2 and CO ? 120

α -Keratin 122

Bacterial and Bovine Rhodopsin 123

Biochemistry in the Clinic 4-1 Prions—the Rogue Proteins 126

Summary 126 / Study Exercises 127 / Further Reading 130

Part II Dynamic Function of Biomolecules

5 Enzymes I: Reactions, Kinetics, and Inhibition 131

5.1 Enzymes as Biological Catalysts 132

Introduction to Enzymes 132

Catalytic Properties of Enzymes 133

Enzymes and Cofactors 134

Window on Biochemistry 5-1 A Heat-Stable Enzyme Catalyzes

Green Chemistry 135

Naming of Enzymes 135

5.2 The Kinetic Properties of Enzymes 137

Michaelis-Menten Equation 137

Just in Time Review Kinetics—The Study of Reaction Rates 138

Kinetic Constants K_M , V_{max} , and k_3 140

Window on Biochemistry 5-2 The Lineweaver-Burke Plot—

Straightening Out Enzyme Kinetics 142

Characteristics of Enzyme Reactions 143

5.3 Substrate Binding and Enzyme Action 145

Enzyme Active Sites 145

General Acid-Base Catalysis 148

Metal-Ion Catalysis 149

Covalent Catalysis 150

5.4 Enzyme Inhibition 150

Reversible and Irreversible Inhibition 151

Competitive Inhibition 152

Noncompetitive Inhibition 154

Uncompetitive Inhibition 155

Enzyme Inhibition in the Lab 155

Window on Biochemistry 5-3 Curcumin—A Curry Ingredient That Slows Tumor Growth by Enzyme Inhibition 156

Biochemistry in the Clinic 5-1 Protease Inhibitors—A Tale of Two Diseases 157

Summary 158 / Study Exercises 159 / Further Reading 162

6 Enzymes II: Coenzymes, Regulation, Abzymes, and Ribozymes 163

6.1 Enzyme: Coenzyme Partners 164

Coenzymes 164

Vitamins 165

Metals as Nutrients 165

6.2 Allosteric Enzymes 170

Window on Biochemistry 6-1 The Newest Vital Amine—

Choline 171

Positive and Negative Effectors 171

Models to Describe Allosteric Regulation 173

6.3 Cellular Regulation of Enzymes 175

Covalent Modification of Regulatory Enzymes 175

Activation by Proteolytic Cleavage 177

Regulation by Isoenzymes 179

6.4 Design of New Enzymes 180

Site-Directed Mutagenesis 181

Abzymes 181

Window on Biochemistry 6-2 Those Promiscuous

Enzymes 182

6.5 Ribozymes 184

Ribonuclease P 184

Self-splicing RNA Introns 185

Significance of Ribozymes 186

Window on Biochemistry 6-3 The Smallest Ribozyme? 186

6.6 Biological Catalysts in the Future 187

Enzyme Structure and Action 188

Enzyme Action in the Cell 188

Ribozymes 188

Practical Uses of Enzymes 189

Biochemistry in the Clinic 6-1 A Viral Enzyme That Kills

Bacillus anthracis 192

Summary 192 / Study Exercises 193 / Further Reading 195

7 Carbohydrates: Structure and Biological Function 196

7.1 Monosaccharides 197

Aldoses 199

Ketoses 200

7.2 Carbohydrates in Cyclic Structures	201
Hemiacetals and Hemiketals	201
Anomers and Haworth Structures	204
Monosaccharides in Chair Conformations	204
7.3 Reactions of Monosaccharides	205
Oxidation-Reduction	206
Esterification	207
Amino Derivatives	208
<i>Window on Biochemistry 7-1</i> French Fries à la Plastic	208
Glycoside Formation	209
<i>Window on Biochemistry 7-2</i> Sweeter than Sugar, and No Calories	212
7.4 Polysaccharides	213
Storage Polysaccharides	214
Structural Polysaccharides	216
Structural Peptidoglycans	219
7.5 Glycoproteins	220
Glycoprotein Structure	220
Glycoprotein Function	222
<i>Window on Biochemistry 7-3</i> Safe Blood Transfusions Depend on Mixing the Correct Carbohydrates	224
Glycoproteins as Drugs	225
Lectins—Proteins That Recognize Carbohydrates	226
<i>Biochemistry in the Clinic 7-1</i> Can you Tolerate Lactose?	226
Summary	228 / Study Exercises 228 / Further Reading 230
8 Lipids: Structure and Biological Function	231
8.1 Fatty Acids	232
Fatty Acid Structure	232
Physical and Chemical Properties of Fatty Acids	234
<i>Window on Biochemistry 8-1</i> Anandamide: Pain Relief and Chocolate Cravings	235
8.2 Nonpolar Lipids—Triacylglycerols	236
Triacylglycerol Structure	236
Triacylglycerol Reactivity	238
<i>Window on Biochemistry 8-2</i> How Much Trans Fat is in Your Food?	238
Biological Properties of Triacylglycerols	240
8.3 Polar Lipids	241
Glycerophospholipids	242
Sphingolipids	243
Polar Lipids and Membranes	243
8.4 Steroids and Other Lipids	245
Steroids	245
Terpenes	248
Eicosanoids	248
Lipid-soluble Vitamins	252
Pheromones	253
<i>Biochemistry in the Clinic 8-1</i> Fish Oils—Omega-3 Fatty Acids for a Healthy Heart and Much More	254
Electron Carriers	255
Summary	256 / Study Exercises 256 / Further Reading 258
9 Biological Membranes and Cellular Transport	259
9.1 Biological Membranes	260
Biological Roles of Membranes	260
Membrane Components and Structures	260
Membrane Proteins	262
The Fluid-Mosaic Model for Membranes	265
9.2 Membrane Transport	266
Passive Transport: Simple and Facilitated Diffusion	267
Active Transport: Ion Pumping	269
9.3 Examples of Membrane Transport	269
Aquaporins	269
Glycophorin A of the Erythrocyte Membrane	270
Glucose Permease of Erythrocyte Membrane	272
Na ⁺ –K ⁺ ATPase Pump	274
Ion Channels and Patch Clamps	275
<i>Window on Biochemistry 9-1</i> Cystic Fibrosis is Caused by a Defective Ion Channel	276
<i>Biochemistry in the Clinic 9-1</i> Membrane Pumps May be a Cause of Drug Resistance in Bacteria and Humans	277
Summary	278 / Study Exercises 278 / Further Reading 281
Part III Storage and Transfer of Biological Information	
10 DNA and RNA: Structure and Function	282
10.1 RNA and DNA Chemical Structures	283
Components of Nucleotides	283
<i>Window on Biochemistry 10-1</i> Purines and Pyrimidines with Physiological Activity	286
Nucleic Acids	288
DNA and RNA Structures and Bonding	290
10.2 DNA Structural Elements	291
The DNA Double Helix	292
Physical and Biological Properties of the Double Helix	295
Tertiary Structure of DNA	298
10.3 RNA Structural Elements	299
tRNA Structure	301
rRNA Structure	302
10.4 Cleavage of DNA and RNA by Nucleases	303
Nucleases	303
DNA Restriction Enzymes	304
<i>Window on Biochemistry 10-2</i> Onconase—A Novel Ribonuclease with Antitumor Activity	305
10.5 Nucleic Acid-Protein Complexes	306
Viruses	307
Chromosomes	307
snRNPs	310
<i>Biochemistry in the Clinic 10-1</i> A Human DNase Relieves the Symptoms of Cystic Fibrosis	310
Ribosomes	311
Ribonucleoprotein Enzymes	311
Summary	312 / Study Exercises 312 / Further Reading 314

11 DNA Replication and Transcription: Biosynthesis of DNA and RNA 315

11.1 Replication of DNA 317

Characteristics of the Replication Process 317

11.2 Action of DNA Polymerases 321

DNA Polymerase I 321

DNA Polymerases II and III 322

Okazaki Fragments 323

The DNA Replication Process 324

Eukaryotic Chromosomes, Telomeres, and

Telomerase 327

Window on Biochemistry 11-1 Inhibition of Telomerase—A Cure for Cancer? 328

11.3 DNA Damage and Repair 330

Spontaneous Mutations 330

Induced Mutations 332

Window on Biochemistry 11-2 Some Tumor Suppressor Proteins

Function by Repairing Damaged DNA 333

Oxidative Damage to Guanine 335

11.4 Synthesis of RNA 336

DNA-Directed RNA Synthesis 337

RNA-Directed RNA Synthesis 341

11.5 Post-transcriptional Modification of RNA 341

tRNA and rRNA Processing 341

mRNA Processing 342

Gene Silencing by RNA Interference 344

11.6 Base Sequences in DNA 345

Biochemistry in the Clinic 11-1 Sunlight and Skin Cancer 347

Summary 349 / Study Exercises 349 / Further Reading 351

12 Translation of RNA: The Genetic Code and Protein Metabolism 352

12.1 The Process of Protein Synthesis 353

Characteristics of Translation 353

Window on Biochemistry 12-1 Translation in the Nucleus?

Maybe, Maybe Not 355

12.2 The Three Stages of Protein Synthesis 360

Initiation, Elongation, and Termination 360

Polyribosomes 366

Protein Synthesis and Energy 366

Inhibition of Protein Synthesis by Antibiotics 367

Window on Biochemistry 12-2 Triclosan—An Antibacterial in Your

Toothpaste 370

12.3 Post-translational Processing of Proteins 370

Protein Folding 370

Biochemical Modifications 371

Protein Targeting 372

The Proteasome and Protein Degradation 373

12.4 Regulation of Protein Synthesis and Gene Expression 374

Principles of Regulating Gene Expression 376

Three Classes of Regulatory Proteins 378

Examples of Gene Regulation 380

Regulation of Gene Expression by RNA 382

Biochemistry in the Clinic 12-1 Ricin—The Killer Protein 384

Summary 384 / Study Exercises 385 / Further Reading 387

13 Recombinant DNA and Other Topics in Biotechnology 389

13.1 Recombinant DNA Technology 390

Molecular Cloning 391

Cloning Vectors 393

13.2 Preparing Recombinant DNA 395

Design of Recombinant DNA 395

Transformation 397

Isolation and Cloning of a Single Gene 400

13.3 DNA Amplification by the Polymerase Chain Reaction 401

Fundamentals of the Polymerase Chain Reaction 401

Applications of the Polymerase Chain Reaction 403

Window on Biochemistry 13-1 Ancient DNA—When Is Old Too Old? 404

13.4 Applications of Recombinant DNA Technology 405

Recombinant Protein Products 405

Genetically Altered Organisms 407

Window on Biochemistry 13-2 Products from Genetically Modified

Organisms on the Grocery Shelf 408

Human Gene Therapy 410

13.5 Genomics—Studying Genomes 411

Sequencing Entire Genomes 411

Model Organisms 412

Bioinformatics 412

Window on Biochemistry 13-3 How Many Genes Are Necessary for Life? 413

Biochemistry in the Clinic 13-1 Human Gene Therapy—A Future Promise 414

Summary 415 / Study Exercises 415 / Further Reading 416

Part IV Metabolism and Energy

14 Basic Concepts of Cellular Metabolism and Bioenergetics 417

14.1 Intermediary Metabolism 419

Metabolons—Functional Units of Metabolism 420

Two Directions of Metabolism 422

Stages of Metabolism 424

Deciphering Metabolic Pathways 426

14.2 The Chemistry of Metabolism 427

Oxidation-Reduction Reactions 428

Biochemical Redox Agents 429

Group-Transfer Reactions 429

Hydrolysis Reactions 430

Nonhydrolytic Cleavage Reactions 431

Isomerization and Rearrangement Reactions	432
Bond Formation Reactions Using Energy from ATP	432
Combining Reaction Types	433
14.3 Concepts of Bioenergetics	434
Free Energy Change, ΔG	434
Standard Free Energy Change, ΔG°	435
<i>Window on Biochemistry 14-1</i> Using NMR to Study Muscle Biochemistry	436
Experimental Measurement of ΔG°	437
Energy from ATP	438
ATP and Phosphoanhydride Bonds	439
<i>Window on Biochemistry 14-2</i> Thioesters—Ancient, but Still Lots of Energy	440
Other Reactive Molecules for Energy Transfer	441
<i>Biochemistry in the Clinic 14-1</i> Screening Newborns for Metabolic Disorders using Mass Spectrometry	443
Summary	445 / Study Exercises 445 / Further Reading 448
15 Metabolism of Carbohydrates	449
15.1 The Energy Metabolism of Glucose	451
The First Five Reactions of Glycolysis—Investing Energy	452
The Second Half of Glycolysis—Obtaining Dividends	454
15.2 Entry of Other Carbohydrates into Glycolysis	456
Dietary Carbohydrates	456
Fructose, Galactose, and Glycerol	457
Glucose from Intracellular Glycogen and Starch	458
15.3 Pyruvate Metabolism	460
Lactate Fermentation	460
Ethanol Fermentation	461
<i>Window on Biochemistry 15-1</i> The Biochemistry of Yogurt—For Your Good Health	462
15.4 Biosynthesis of Carbohydrates	464
Synthesis of Glucose	464
Summary of Gluconeogenesis	468
Activation of Glucose and Galactose for Biosynthesis	468
Synthesis of Polysaccharides	470
Synthesis of Disaccharides	471
<i>Window on Biochemistry 15-2</i> Synthesis of Milk Sugar— α -Lactalbumin Rules	472
15.5 Regulation of Carbohydrate Metabolism	473
Glycogen Phosphorylase and Glycogen Synthase	473
Hexokinase	476
Phosphofructokinase	476
Fructose-1,6-Bisphosphatase	476
Pyruvate Kinase and Pyruvate Carboxylase	477
<i>Biochemistry in the Clinic 15-1</i> Lactate Metabolism and Lactic Acidosis	478
Summary	479 / Study Exercises 479 / Further Reading 482
16 Production of NADH and NADPH: The Citric Acid Cycle, The Glyoxylate Cycle, and the Pentose Phosphate Pathway	483
16.1 The Pyruvate Dehydrogenase Complex	485
Pyruvate and Mitochondria	485
Oxidation of Pyruvate	487
The Pyruvate Dehydrogenase Complex in Action	487
Summary of the Pyruvate Dehydrogenase Complex	492
<i>Window on Biochemistry 16-1</i> Lipoic Acid—The Universal Antioxidant	493
16.2 The Citric Acid Cycle	494
Reactions of the Citric Acid Cycle	494
Summary of the Citric Acid Cycle	497
<i>Window on Biochemistry 16-2</i> Fluoroacetate—Blocking the Citric Acid Cycle	498
16.3 The Citric Acid Cycle in Regulation and Biosynthesis	499
Regulation of Aerobic Pyruvate Metabolism	499
Anabolic Roles of the Citric Acid Cycle	502
16.4 The Glyoxylate Cycle	503
Reaction Steps of the Glyoxylate Cycle	503
16.5 The Pentose Phosphate Pathway	505
Reaction Steps of the Pentose Phosphate Pathway	506
<i>Biochemistry in the Clinic 16-1</i> Dichloroacetate as a Metabolic Stimulant	509
Summary	510 / Study Exercises 510 / Further Reading 512
17 ATP Formation by Electron-Transport Chains	513
17.1 Mitochondrial Electron Transport	515
Electron Transport and Oxidative Phosphorylation	516
The Electron-Transport Chain	517
<i>Just in Time Review</i> Bioenergetics of Redox Processes	518
17.2 Components of the Electron-Transport Chain	519
Complex I	519
Complex II	521
Complex III	522
Complex IV	523
17.3 Oxidative Phosphorylation	524
Coupling of Electron Transport with ATP Synthesis	525
Components of ATP Synthase	527
Regulation of Oxidative Phosphorylation	527
17.4 Energy Yield from Glucose Metabolism	528
Recycling of Cytoplasmic NADH	528
<i>Window on Biochemistry 17-1</i> Cytochromes P450—Enzymes That Use Oxygen to Detoxify Chemicals	531
17.5 Photosynthetic Electron Transport	531
Photosynthesis	531

Chloroplasts	532
Biomolecules and Light	534
<i>Window on Biochemistry 17-2</i> Dragon Fish Use Chlorophylls to See Red	538
Photosynthetic Light Reactions	538
Photosystems I and II	539
Photophosphorylation	542
17.6 Synthesis of Carbohydrates by the Calvin Cycle	544
Stage I: Addition of CO ₂ to an Acceptor Molecule (Carbon Fixation)	545
Stage II: Entry of 3-Phosphoglycerate into Mainstream Metabolism	545
Stage III: Synthesis of Carbohydrates from Glyceraldehyde-3-Phosphate	546
Stage IV: Completion of the Calvin Cycle by Regeneration of Ribulose-1,5-Bisphosphate	547
Photorespiration	548
<i>Biochemistry in the Clinic 17-1</i> Are There Health Benefits from Supplemental CoQ?	550
Summary	551 / Study Exercises 552 / Further Reading 554
 18 Metabolism of Fatty Acids and Lipids	 555
18.1 Metabolism of Dietary Triacylglycerols	557
<i>Window on Biochemistry 18-1</i> Olestra—A Modified Sugar Becomes a Fat Substitute	558
Initial Digestion of Dietary Fats	558
Fatty Acids in Muscle Cells	561
18.2 Catabolism of Fatty Acids	563
β Oxidation	563
The Steps of β Oxidation	564
Significance of β Oxidation	567
β Oxidation of Unsaturated Fatty Acids	568
β Oxidation of Fatty Acids with Odd Numbers of Carbons	570
18.3 Biosynthesis of Fatty Acids	571
The Steps of Fatty Acid Synthesis	572
Biosynthesis of Unsaturated Fatty Acids	575
Regulation of Fatty Acid Metabolism	575
18.4 Cholesterol	576
Cholesterol Biosynthesis	577
<i>Window on Biochemistry 18-2</i> Phytosterols—Fighting Disease with Plants	581
Cholesterol as a Precursor for Other Steroids	582
18.5 Transport of Lipids in Blood	584
Lipoproteins	584
Cholesterol and Health	586
<i>Biochemistry in the Clinic 18-1</i> Cholesterol-lowering drugs	587
Summary	589 / Study Exercises 589 / Further Reading 591

19 Metabolism of Amino Acids and Other Nitrogenous Compounds 592

19.1 The Nitrogen Cycle	593
Biological Nitrogen Fixation	595
19.2 Biosynthesis of Amino Acids	597
Use of Biological Nitrogen	597
Essential and Nonessential Amino Acids	599
<i>Window on Biochemistry 19-1</i> Some Herbicides Block Synthesis of Aromatic Amino Acids	603
19.3 Catabolism of Amino Acids	603
Transamination	605
Catabolism of Carbon Skeletons	606
19.4 Elimination of NH₄⁺	608
The Urea Cycle	609
19.5 Amino Acids as Precursors of Other Biomolecules	611
Porphyryns	612
Biogenic Amines and Other Products	614
<i>Window on Biochemistry 19-2</i> Treating Depression—Neurotransmitters and Monoamine Oxidase Inhibitors	617
Purine and Pyrimidine Nucleotides	617
<i>Biochemistry in the Clinic 19-1</i> Genetic Defects in Amino Acid Metabolism	622
Summary	624 / Study Exercises 624 / Further Reading 626

20 Integration, Specialization, and Hormonal Control of Metabolism 627

20.1 Overall Strategies of Metabolism	628
Review of Metabolism	628
Intermediates that Connect Pathways	631
20.2 Metabolic Integration and Specialization	632
Metabolic Profiles of Organs	632
Integrated Metabolic Pathways	635
Production and Distribution of Ketone Bodies	636
<i>Window on Biochemistry 20-1</i> Dieting and Ketosis	638
20.3 Metabolic Control by Hormones	639
Action of Hormones	639
20.4 Metabolic Responses to Stressful Conditions	641
Conventional Lifestyle	641
Disturbances that Modify Metabolism	641
Biochemistry of Exercise	643
20.5 Biochemical Factors in Obesity	645
Regulation of Body Mass	645
Hormones that Control Appetite	646
<i>Biochemistry in the Clinic 20-1</i> Body Mass Index—Do I Have Too Much Body Fat?	648
Summary	648 / Study Exercises 648 / Further Reading 651

Special Topics in Modern Biochemistry

I Signal Transduction: Flow of Information Through Cell Membranes 652

I.1 Hormones and Signal Transduction 653

Basic Characteristics of Signal Transduction Processes 654

Receptor Enzyme Systems 655

The Serpentine Receptors 657

I.2 Diseases of Cellular Communication and Drug Design 659

Window on Biochemistry I-1 Cell-Signaling Processes Are Altered by Drugs and Toxins. 660

Further Reading 661

II Molecular Immunology 662

II.1 Basic Components of the Immune System 663

The Humoral Immune Response and Antibody Production 663

The Cellular Immune Response 665

Window on Biochemistry II-1 Cyclosporin A—Sometimes Suppressing the Immune System Can Be a Good Thing. 666

Further Reading 666

Glossary 667

Answers to Study Problems 668

Index 709
