I FUEL CELL PRINCIPLES

1 INTRODUCTION	3
1.1 What Is a Fuel Cell? / 3	
1.2 A Simple Fuel Cell / 5	
1.3 Fuel Cell Advantages / 8	
1.4 Fuel Cell Disadvantages / 8	
1.5 Fuel Cell Types / 10	
1.6 Basic Fuel Cell Operation / 12	
1.7 Fuel Cell Performance / 16	
1.8 Characterization and Modeling / 18	
1.9 Fuel Cell Technology / 18	
1.10 Fuel Cells and the Environment / 19	
Chapter Summary / 20	
Chapter Exercises / 21	

2 FUEL CELL THERMODYNAMICS**23**

- 2.1 Thermodynamics Review / 23
 - 2.1.1 What Is Thermodynamics? / 24
 - 2.1.2 Internal Energy / 24
 - 2.1.3 First Law / 25
 - 2.1.4 Second Law / 25
 - 2.1.5 Thermodynamic Potentials / 27
 - 2.1.6 Molar Quantities / 30
 - 2.1.7 Standard State / 31
 - 2.1.8 Reversibility / 31
- 2.2 Heat Potential of a Fuel: Enthalpy of Reaction / 32
 - 2.2.1 Calculating Reaction Enthalpies / 32
 - 2.2.2 Temperature Dependence of Enthalpy / 34
- 2.3 Work Potential of a Fuel: Gibbs Free Energy / 35
 - 2.3.1 Calculating Gibbs Free Energies / 35
 - 2.3.2 Relationship between Gibbs Free Energy and Electrical Work / 37
 - 2.3.3 Relationship between Gibbs Free Energy and Reaction Spontaneity / 38
 - 2.3.4 Relationship between Gibbs Free Energy and Voltage / 38
 - 2.3.5 Standard Electrode Potentials: Computing Reversible Voltages / 39
- 2.4 Predicting Reversible Voltage of a Fuel Cell under Non-Standard-State Conditions / 42
 - 2.4.1 Reversible Voltage Variation with Temperature / 42
 - 2.4.2 Reversible Voltage Variation with Pressure / 44
 - 2.4.3 Reversible Voltage Variation with Concentration: Nernst Equation / 45
 - 2.4.4 Concentration Cells / 49
 - 2.4.5 Summary / 51
- 2.5 Fuel Cell Efficiency / 52
 - 2.5.1 Ideal Reversible Fuel Cell Efficiency / 52
 - 2.5.2 Real (Practical) Fuel Cell Efficiency / 54
- Chapter Summary / 56
- Chapter Exercises / 57

3 FUEL CELL REACTION KINETICS**59**

- 3.1 Introduction to Electrode Kinetics / 59
 - 3.1.1 Electrochemical Reactions Are Different from Chemical Reactions / 60
 - 3.1.2 Electrochemical Processes Are Heterogeneous / 60
 - 3.1.3 Current Is a Rate / 60

3.1.4	Charge Is an Amount / 61
3.1.5	Current Density Is More Fundamental Than Current / 62
3.1.6	Potential Controls Electron Energy / 62
3.1.7	Reaction Rates Are Finite / 63
3.2	Why Charge Transfer Reactions Have an Activation Energy / 64
3.3	Activation Energy Determines Reaction Rate / 66
3.4	Calculating Net Rate of a Reaction / 67
3.5	Rate of Reaction at Equilibrium: Exchange Current Density / 68
3.6	Potential of a Reaction at Equilibrium: Galvani Potential / 69
3.7	Potential and Rate: Butler–Volmer Equation / 71
3.8	Exchange Currents and Electrocatalysis: How to Improve Kinetic Performance / 76
3.8.1	Increase Reactant Concentration / 76
3.8.2	Decrease Activation Barrier / 77
3.8.3	Increase Temperature / 78
3.8.4	Increase Reaction Sites / 78
3.9	Simplified Activation Kinetics: Tafel Equation / 78
3.10	Different Fuel Cell Reactions Produce Different Kinetics / 81
3.11	Catalyst–Electrode Design / 84
3.12	Quantum Mechanics: Framework for Understanding Catalysis in Fuel Cells / 86
	Chapter Summary / 89
	Chapter Exercises / 90

4 FUEL CELL CHARGE TRANSPORT

93

4.1	Charges Move in Response to Forces / 93
4.2	Charge Transport Results in a Voltage Loss / 96
4.3	Characteristics of Fuel Cell Charge Transport Resistance / 99
4.3.1	Resistance Scales with Area / 100
4.3.2	Resistance Scales with Thickness / 102
4.3.3	Fuel Cell Resistances Are Additive / 103
4.3.4	Ionic (Electrolyte) Resistance Usually Dominates / 104
4.4	Physical Meaning of Conductivity / 104
4.4.1	Electronic versus Ionic Conductors / 105
4.4.2	Electron Conductivity in a Metal / 106
4.4.3	Ion Conductivity in a Crystalline Solid Electrolyte / 106
4.5	Review of Fuel Cell Electrolyte Classes / 107
4.5.1	Ionic Conduction in Aqueous Electrolytes/Ionic Liquids / 108
4.5.2	Ionic Conduction in Polymer Electrolytes / 110
4.5.3	Ionic Conduction in Ceramic Electrolytes / 121

4.6	More on Diffusivity and Conductivity (Optional) / 125	
4.6.1	Atomistic Origins of Diffusivity / 125	
4.6.2	Relationship between Conductivity and Diffusivity (1) / 128	
4.6.3	Relationship between Diffusivity and Conductivity (2) / 130	
4.7	Why Electrical Driving Forces Dominate Charge Transport (Optional) / 131	
	Chapter Summary / 132	
	Chapter Exercises / 133	
5	FUEL CELL MASS TRANSPORT	137
5.1	Transport in Electrode versus Flow Structure / 138	
5.2	Transport in Electrode: Diffusive Transport / 140	
5.2.1	Electrochemical Reaction Drives Diffusion / 140	
5.2.2	Limiting Current Density / 145	
5.2.3	Concentration Affects Nernst Voltage / 146	
5.2.4	Concentration Affects Reaction Rate / 147	
5.2.5	Summary of Fuel Cell Concentration Loss / 149	
5.3	Transport in Flow Structures: Convective Transport / 150	
5.3.1	Fluid Mechanics Review / 151	
5.3.2	Mass Transport in Flow Channels / 156	
5.3.3	Gas Is Depleted along Flow Channel / 159	
5.3.4	Flow Structure Design / 163	
	Chapter Summary / 166	
	Chapter Exercises / 168	
6	FUEL CELL MODELING	169
6.1	Putting It All Together: A Basic Fuel Cell Model / 169	
6.2	A 1D Fuel Cell Model / 173	
6.2.1	Flux Balance in Fuel Cells / 174	
6.2.2	Simplifying Assumptions / 177	
6.2.3	Governing Equations / 179	
6.2.4	Examples / 183	
6.2.5	Additional Considerations / 192	
6.3	Fuel Cell Models Based on Computational Fluid Dynamics (Optional) / 193	
	Chapter Summary / 196	
	Chapter Exercises / 197	
7	FUEL CELL CHARACTERIZATION	201
7.1	What Do We Want to Characterize? / 201	
7.2	Overview of Characterization Techniques / 203	

7.3	In Situ Electrochemical Characterization Techniques / 204
7.3.1	Fundamental Electrochemical Variables: Voltage, Current, and Time / 204
7.3.2	Basic Fuel Cell Test Station Requirements / 206
7.3.3	Current-Voltage Measurement / 207
7.3.4	Electrochemical Impedance Spectroscopy / 209
7.3.5	Current Interrupt Measurement / 224
7.3.6	Cyclic Voltammetry / 227
7.4	Ex Situ Characterization Techniques / 228
7.4.1	Porosity Determination / 228
7.4.2	BET Surface Area Determination / 229
7.4.3	Gas Permeability / 230
7.4.4	Structure Determinations / 230
7.4.5	Chemical Determinations / 230
	Chapter Summary / 230
	Chapter Exercises / 232

II FUEL CELL TECHNOLOGY

8	OVERVIEW OF FUEL CELL TYPES	235
8.1	Introduction / 235	
8.2	Phosphoric Acid Fuel Cell / 235	
8.3	Polymer Electrolyte Membrane Fuel Cell / 237	
8.4	Alkaline Fuel Cell / 240	
8.5	Molten Carbonate Fuel Cell / 242	
8.6	Solid-Oxide Fuel Cell / 244	
8.7	Summary Comparison / 246	
	Chapter Summary / 246	
	Chapter Exercises / 249	
9	OVERVIEW OF FUEL CELL SYSTEMS	251
9.1	Fuel Cell Stack (Fuel Cell Subsystem) / 252	
9.2	The Thermal Management Subsystem / 256	
9.3	Fuel Delivery/Processing Subsystem / 258	
9.3.1	H ₂ Storage / 259	
9.3.2	Using a H ₂ Carrier / 262	
9.3.3	Fuel Delivery/Processing Subsystem Summary / 265	
9.4	Power Electronics Subsystem / 265	
9.4.1	Power Regulation / 267	

- 9.4.2 Power Inversion / 268
- 9.4.3 Monitoring and Control System / 269
- 9.4.4 Power Supply Management / 270
- 9.5 Case Study of Fuel Cell System Design: Sizing a Portable Fuel Cell / 271
- Chapter Summary / 274
- Chapter Exercises / 276

10 FUEL CELL SYSTEM INTEGRATION AND SUBSYSTEM DESIGN 279

- 10.1 Integrated Overview of Four Primary Subsystems / 280
 - 10.1.1 Fuel Processor Subsystem / 283
 - 10.1.2 Fuel Cell Subsystem / 285
 - 10.1.3 Power Electronics Subsystem / 288
 - 10.1.4 Thermal Management Subsystem / 289
 - 10.1.5 Net Electrical and Heat Recovery Efficiencies / 290
- 10.2 External Reforming: Fuel Processing Subsystems / 292
 - 10.2.1 Fuel Reforming Overview / 292
 - 10.2.2 Steam Reforming / 293
 - 10.2.3 Partial Oxidation Reforming / 297
 - 10.2.4 Autothermal Reforming (AR) / 299
 - 10.2.5 Water–Gas Shift Reactors / 303
 - 10.2.6 Carbon Monoxide Clean-Up / 304
 - 10.2.7 Selective Methanation of Carbon Monoxide to Methane / 305
 - 10.2.8 Selective Oxidation of Carbon Monoxide to Carbon Dioxide / 305
 - 10.2.9 Pressure Swing Adsorption / 306
 - 10.2.10 Palladium Membrane Separation / 307
- 10.3 Thermal Management Subsystem / 308
 - 10.3.1 Overview of Pinch Point Analysis Steps / 308
- Chapter Summary / 321
- Chapter Exercises / 322

11 ENVIRONMENTAL IMPACT OF FUEL CELLS 325

- 11.1 Life Cycle Assessment / 325
 - 11.1.1 Life Cycle Assessment as a Tool / 326
 - 11.1.2 Life Cycle Assessment Applied to Fuel Cells / 328
- 11.2 Important Emissions for LCA / 334
- 11.3 Emissions Related to Global Warming / 335
 - 11.3.1 Climate Change / 335
 - 11.3.2 Natural Greenhouse Effect / 335
 - 11.3.3 Global Warming / 336

11.3.4	Evidence of Global Warming /	337
11.3.5	Hydrogen as a Potential Contributor to Global Warming /	338
11.3.6	Quantifying Environmental Impact—Carbon Dioxide Equivalent /	341
11.3.7	Quantifying Environmental Impact—External Costs of Global Warming /	341
11.4	Emissions Related to Air Pollution /	344
11.4.1	Hydrogen as a Potential Contributor to Air Pollution /	345
11.4.2	Quantifying Environmental Impact—Health Effects of Air Pollution /	345
11.4.3	Quantifying Environmental Impact—External Costs of Air Pollution /	347
11.5	Analyzing Entire Scenarios with LCA /	348
11.5.1	Electric Power Scenario /	349
	Chapter Summary /	352
	Chapter Exercises /	353

APPENDICES

A	CONSTANTS AND CONVERSIONS	357
B	THERMODYNAMIC DATA	359
C	STANDARD ELECTRODE POTENTIALS AT 25°C	369
D	QUANTUM MECHANICS	371
D.1	Atomic Orbitals /	373
D.2	Postulates of Quantum Mechanics /	374
D.3	One-Dimensional Electron Gas /	376
D.4	Analogy to Column Buckling /	377
D.5	Hydrogen Atom /	378
E	GOVERNING EQUATIONS OF CFD FUEL CELL MODEL	381
F	PERIODIC TABLE OF THE ELEMENTS	385
G	SUGGESTED FURTHER READING	387
	BIBLIOGRAPHY	389
	IMPORTANT EQUATIONS	395
	INDEX	399
