

SPORT NUTRITION

A male athlete with dark hair is shown in profile, drinking from a blue water bottle with a yellow cap. He is wearing a red and white striped athletic jersey with a small logo on the sleeve that says "E-Nation". The background is a blurred green field, suggesting an outdoor sports setting.

An Introduction to Energy
Production and Performance

Asker Jeukendrup
Michael Gleeson

Contents

Preface		vii
Acknowledgments		xi
Chapter 1	General Principles of Nutrition	1
	Function of Food • Dietary Carbohydrate • Dietary Lipids • Dietary Protein • Water • Vitamins, Minerals, and Trace Elements • Alcohol • Essential Nutrients • Assessing Nutrient and Energy Intake • Analyzing Nutrient Intake • Key Points • Key Terms • Recommended Readings	
Chapter 2	Fuel Sources for Muscle and Exercise Metabolism	31
	Subcellular Structure and Mechanism of Force Generation in Skeletal Muscle • Sources of Energy for Muscle Force Generation • Fuel Stores in Skeletal Muscle • Regulation of Energy Metabolism • Metabolic Responses to Exercise • Metabolic Adaptation to Exercise Training • Key Points • Key Terms • Recommended Readings	
Chapter 3	Energy	61
	What Is Energy? • Energetic Efficiency • Measuring the Energy Content of Food • Measuring Energy Expenditure • Components of Energy Expenditure • Energy Balance • Key Points • Key Terms • Recommended Readings	
Chapter 4	Gastric Emptying, Digestion, and Absorption	81
	Anatomy of the Gastrointestinal Tract • Regulation of the Gastrointestinal Tract • Digestion • Absorption • Regulation of Gastric Emptying • Gastrointestinal Problems • Key Points • Key Terms • Recommended Readings	
Chapter 5	Carbohydrate	101
	History • Role of Carbohydrate • Carbohydrate Before Exercise • Carbohydrate During Exercise • Carbohydrate After Exercise • What Athletes Really Do • Key Points • Key Terms • Recommended Readings	

Chapter 6	Fat	127
	Fat Metabolism During Exercise • What Limits Fat Oxidation • Fat As a Fuel During Exercise • Regulation of Carbohydrate and Fat Metabolism • Fat Supplementation and Exercise • Effect of Diet on Fat Metabolism and Performance • Supplements That Increase Fat Oxidation • Key Points • Key Terms • Recommended Readings	
Chapter 7	Protein and Amino Acids	147
	Amino Acids • Techniques to Study Protein and Amino Acid Metabolism • Protein Requirements for Exercise • Training and Protein Metabolism • Effect of Protein Intake on Protein Synthesis • Amino Acids As Ergogenic Aids • Protein Intake and Health Risks • Key Points • Key Terms • Recommended Readings	
Chapter 8	Water Requirements and Fluid Balance	169
	Thermoregulation and Exercise in the Heat • Effects of Dehydration on Exercise Performance • Mechanisms of Heat Illness • Effects of Fluid Intake on Exercise Performance • Daily Water Balance • Fluid Requirements for Athletes • Key Points • Key Terms • Recommended Readings	
Chapter 9	The Micronutrients: Vitamins and Minerals	197
	Water-Soluble and Fat-Soluble Vitamins • Macrominerals and Microminerals • Micronutrients Form the Building Blocks of Tissues • Micronutrients As Antioxidants • Essential Functions of the Micronutrients • Effects of Vitamins on Exercise Performance • Ergogenic Effect of Mineral Supplementation • Recommendations for Micronutrient Intake in Athletes • Key Points • Key Terms • Recommended Readings	
Chapter 10	Nutrition Supplements	231
	Nonregulation of Nutrition Supplements • Critical Evaluation of Nutrition Supplements Studies • A Detailed Look at Nutrition Supplements • Contamination of Nutrition Supplements • Key Points • Key Terms • Recommended Readings	
Chapter 11	Weight Management	267
	Ideal Body Weight and Composition • Weight Loss • Making Weight and Rapid Weight-Loss Strategies • Key Points • Key Terms • Recommended Readings	
Chapter 12	Eating Disorders in Athletes	291
	Types of Eating Disorders • Prevalence of Eating Disorders in Athletes • Risk Factors • Effects of Eating Disorders on Sports Performance • Effects of Eating Disorders on the Athlete's Health • Treatment and Prevention of Eating Disorders • Key Points • Key Terms • Recommended Readings	

Chapter 13 Nutrition and Immune Function in Athletes **301**

Functions of the Immune System and Its Cellular Components • General Mechanism of the Immune Response • Effects of Exercise on the Immune System • Nutritional Manipulations to Decrease Immunodepression in Athletes
• Mechanisms of Nutritional Influences on Immune Function in Athletes
• Conclusions and Recommendations • Key Points • Key Terms • Recommended Readings

Appendix A	Key Concepts in Biological Chemistry Relevant to Sport Nutrition	331
Appendix B	Unit Conversion Tables	349
Appendix C	Recommended Daily Allowances for North America	353
Appendix D	Reference Nutrient Intakes for the United Kingdom	357
Appendix E	Recommended Dietary Intakes for Australia	361
Glossary		365
