About the Authors lvii

1 Introduction 1

The .NET Framework and the Microsoft Platform 1

The .NET Framework's Effects on SQL Server 3

The SQL:1999 Standard: Extending the Relational Model 8

User-Defined Types and SQL Server 11

XML: Data and Document Storage 14

Web Services: XML As a Marshaling Format 20

Client Access . . . And Then There Are Clients 22

Client-Side Database APIs and SQL Server 2005 22

Client-Side XML-Based APIs and SQL Server 2005 Integration 23

Extending SQL Server into the Platform: Service Broker
and Notification Services 24

Where Are We? 26

2	Hosting the Runtime: SQL Server As a Runtime Host	27
	Why Care How Hosting Works?	27
	What Is a .NET Framework Runtime Host?	29
	SQL Server As a Runtime Host	31
	<i>SQL Server Resource Management</i>	31
	<i>Exceptional Condition Handling</i>	34
	<i>Code Loading</i>	37
	<i>Security</i>	39
	Loading the Runtime: Processes and AppDomains	40
	Safe Code: How the Runtime Makes It Safer to Run “Foreign” Code	43
	Where the Code Lives: Storing .NET Framework Assemblies (CREATE ASSEMBLY)	46
	Assembly Dependencies: When Your Assemblies Use Other Assemblies	49
	Assemblies and SQL Schemas: Who Owns Assemblies (Information Schema)	51
	<i>System Metadata Tables and INFORMATION_SCHEMA</i>	52
	<i>Assembly Metadata</i>	53
	Maintaining User Assemblies (ALTER ASSEMBLY, DROP ASSEMBLY)	55
	Specification Compliance	58
	Conclusions	60
	Where Are We?	60
3	Procedures and Functions in .NET CLR Languages	61
	Extending SQL Server	61
	CLR Extension Basics	63
	CLR Extension Details	74
	System.Data.SqlTypes	77
	<i>A Few Words About Null Values</i>	77
	<i>Using SqlTypes</i>	80
	Parameters and Return Value	93
	User-Defined Functions	93
	Table-Valued Functions	99
	Stored Procedures	106

Triggers 109
Where Are We? 110

4 In-Process Data Access 111

Programming with SqlClient 111
Context: The SqlContext Class 115
Connections 118
Commands: Making Things Happen 121
Obtaining Results 124
Transactions 128
 TransactionScope Exotica 132
 Best Practices 133
Pipe 135
Creating and Sending New Rowsets 137
Using the WindowsIdentity 139
Calling a Web Service from SQLCLR 140
Exception Handling 143
SqlTriggerContext 149
SqlClient Classes That You Can't Use on the Server 150
Where Are We? 151

5 User-Defined Types and Aggregates 153

Why Do We Need User-Defined Types? 153
Overview of User-Defined Types 154
Creating a User-Defined Type 157
 Null Value Implementation 160
 String Implementation 160
 Binary Implementation 165
 IBinarySerialize.Read/Write 167
 Creating User-Defined Types 170
 Public Properties, Fields, and Methods 173
 Helper Functions 181
 User-Defined-Type Validation 183
 Maintaining User-Defined-Type Definitions 185
 User-Defined Types and XML 187
 Should Objects Be Represented by User-Defined Types? 193

<i>User-Defined Aggregates</i>	207
<i>Implementing a User-Defined Aggregate</i>	209
<i>Creating User-Defined Aggregate</i>	214
<i>Format.Native vs. Format.UserDefined</i>	215
Where Are We?	217

6 Security 219

New Security Features in SQL Server 2005	219
Optional Features Are Turned Off by Default	221
<i>Configuring Security Settings</i>	221
<i>Security and Metadata</i>	223
A Quick Review of SQL Server Security	
Concepts with Enhancements	224
<i>Authentication and Authorization: Principals and Permissions</i>	224
<i>Execution Context and Ownership Chaining</i>	232
SQL Server Password Policies and Credentials	235
Encryption Keys and Built-In Encryption Functions	238
Encryption Functions	242
Separation of Users and Schemas	248
Synonyms	252
Specifying Execution Context for Procedural Code	253
Code Signing	259
SQL Server Permissions and SQLCLR Objects	261
Assembly Permissions: Who Can Catalog	
and Use an Assembly?	262
What .NET Framework Code Can Do from	
within SQL Server: Safety Levels	268
<i>Introduction to Code Access Security</i>	269
<i>Code Access Security and .NET Framework Assemblies</i>	270
Where Are We?	275

7 SQL Engine Enhancements 277

Improvements to the SQL Engine	277
SNAPSHOT Isolation	278
<i>Drawbacks of Versioning</i>	286
<i>Monitoring Versioning</i>	288

Data Definition Language Triggers	289
Event Notifications	294
Large Value Data Types	298
Loading Data with the New BULK Provider	301
Statement-Level Recompilation	301
Query Hints, Plan Guides, and Plan Forcing	303
Where Are We?	309

8 T-SQL Language Enhancements 311

Improvements to Transact-SQL	311
Error Handling	312
INTERSECT and EXCEPT	326
TOP	329
ON DELETE and ON UPDATE	333
OUTPUT	336
APPLY Operators	340
Common Table Expressions	343
Recursive Queries	351
PIVOT and UNPIVOT Operators	359
<i>PIVOT</i>	359
<i>UNPIVOT</i>	365
Ranking and Partitioning	366
<i>ROW_NUMBER</i>	368
<i>RANK</i>	369
<i>DENSE_RANK</i>	370
<i>NTILE</i>	371
<i>PARTITION BY</i>	373
<i>Aggregate Partitions</i>	374
TABLESAMPLE	376
Where Are We?	381

9 XML in the Database: The XML Data Type 383

The XML Data Type	383
Using XML Data Type in Tables	384
Using XML Data Variables and Parameters	390

Typed and Untyped XML: Cataloguing and Using XML SCHEMA COLLECTIONs	392
SQL Server XML SCHEMA COLLECTIONs	394
Typed XML	395
Management of XML Schemas and Schema Collections	397
Security for XML SCHEMA COLLECTIONs and Strongly Typed Instances	400
Creating an Index on an XML Column	401
XML Type Functions	402
SELECT . . . FOR XML Enhancements	403
FOR XML PATH Mode	406
Producing an XML Data Type	407
Producing an Inline XSD Format Schema	409
NULL Database Values	411
Producing a Root Element	412
Other Features	413
Mapping SQL and XML Data Types	414
Mapping SQL Types to XML Types	415
String, Binary, and Decimal Types	415
Other General Data Types	416
Date Data Type	417
Pattern-Based Data Types	417
Wildcard Data Types	418
Nullability	418
OpenXML Enhancements	418
Loading XML into the Database from Files	420
ANSI SQL Standard Compliance	422
XML Data Type	422
Mapping SQL Catalogs and Tables to XML	424
Mapping SQL Data Types to XML Data Types	425
Where Are We?	426

10 XML Query Languages: XQuery and XPath 429

What Is XQuery?	429
An Introduction to XQuery	431
The XQuery Prolog	436
The XQuery Body	437

Comparing and Contrasting XQuery and SQL	446
Using XQuery with the XML Data Type	449
<i>xml.exist(string xquery-text)</i>	450
<i>xml.value(string xquery-text, string SQLType)</i>	452
<i>xml.query(string xquery-text)</i>	454
<i>xml.nodes(string xquery-text)</i>	457
<i>XQuery Standard Functions and Operators</i>	461
<i>SQL Server XQuery Functions and Operators</i>	463
XQuery Functions Supported by SQL Server	463
XQuery Operators Supported by SQL Server	464
<i>SQL Server XQuery Extended Functions</i>	465
<i>Multiple-Document Query in SQL Server XQuery</i>	468
XML DML: Updating XML Columns	468
<i>xml.modify('insert . . .')</i>	470
<i>xml.modify('delete . . .')</i>	473
<i>xml.modify('replace value of . . .')</i>	474
<i>General Conclusions and Best Practices</i>	474
Special Considerations When Using XQuery Inside SQL Server	475
<i>XML Schemas and SQL Server 2005 XQuery</i>	475
<i>XML Indexes Usage in XQuery</i>	477
Where Are We?	480
11 SQL Server Service Broker	481
Messaging Applications	481
Processing Messages	494
Business Transactions	499
<i>Service Programs</i>	503
<i>Conversations</i>	509
<i>Conversation Groups</i>	516
<i>Message Types</i>	524
<i>Contracts</i>	528
<i>Send and Message Type</i>	530
<i>Processing Loop</i>	534
<i>Poison Messages</i>	540
<i>Compensation</i>	541
<i>Distribution</i>	544
Where Are We?	559

12 SQL Server As a Platform for Web Services 561

Mixing Databases and Web Services 561

HTTP Endpoint Declaration 564

CREATE ENDPOINT 569

Endpoint URL 570

Endpoint State 571

Endpoint Metadata 572

Webmethods 573

WSDL Web Service Definition Language 578

XML Namespaces 604

WSDL Generation 605

Stored Procedure in Web Service 614

SQL Batches 622

Other Features 626

SQLXML 4.0 Functionality and SQL Server 2005 627

Where Are We? 640

13 SQL Server 2005 and Clients 641

SQL Native Client 641

New Data Types and Data Type Compatibility Mode 645

User-Defined Types and Relational Data Access APIs 646

Using .NET Framework UDTs in ADO.NET 647

Fetching UDT Data from a DataReader 648

Using .NET Framework UDTs in ODBC,

OLE DB, and ADO Clients 654

Supporting the XML Data Type on the Client 657

Using the XML Data Type in ADO.NET 657

Getting the XML As XML or a String 659

Documents, Fragments, and FOR XML Support 661

Using the XML Data Type in ADO Classic 664

Supporting the Large Value Data Types on the Client 667

Query Notification Support 670

Query Notifications in SQL Server 2005 673

Using Query Notifications in OLE DB and ODBC 676

Dispatching a Notification to an End User or Cache 677

Using Query Notifications from a Database Client 679

<i>Using SqlDependency</i>	680
<i>Using SqlNotificationRequest</i>	682
<i>Using SqlCacheDependency in ASP.NET</i>	685
<i>Eager Notifications</i>	687
<i>When Not to Use Notifications</i>	688
Multiple Active Resultsets	689
<i>Using MARS in ADO.NET 2.0</i>	691
<i>MARS in SQL Native Client</i>	695
New Transaction and Isolation Features in ADO.NET	695
<i>Using the New Isolation Levels</i>	695
<i>Promotable and Declarative Transactions</i>	697
Changes Related to SQL Server 2005 Login	699
<i>Password Change Support</i>	699
<i>Failover Support</i>	701
<i>Encryption Support</i>	702
Comparing the Client and Server Model	
for Stored Procedures	703
Where Are We?	704

14 ADO.NET 2.0 and SqlClient 705

Generic Coding with the ADO.NET 2.0 Base Classes	
and Factories	705
Provider Factories	709
Specifying Configuration Information	712
Enumerating Data Sources and Building	
Connection Strings	714
Other Generic Coding Considerations	717
Schemas in ADO.NET 2.0	719
<i>Who Needs Metadata, Anyway?</i>	720
<i>What Metadata Is Available?</i>	721
<i>Customizing and Extending the Metadata</i>	726
<i>User Customization</i>	729
Tracing Data Access	731
<i>Setting Up Data Tracing</i>	732
<i>Running the Trace</i>	733
<i>Harvest the Results As a CSV File</i>	734

<i>Reading the Trace Output</i>	735
<i>User Data and ADO.NET Tracing</i>	736
<i>Configuring Which Applications Are Traced</i>	736
<i>Using Tracing to Debug a Parameter Binding Problem</i>	740
<i>Inside Data Tracing</i>	742
<i>What Is ETW?</i>	742
Asynchronous Support	743
Bulk Import in SqlClient	749
Client Statistics	752
.NET Framework DataSet and SqlDataAdapter Enhancements	753
Where Are We?	758
15 SQL Server Management Objects	761
Introduction	761
<i>Why Use SMO?</i>	764
<i>ADO vs. SMO</i>	767
Object Model	769
SMO Projects	772
Connections	778
<i>Default Windows Credentials Connection</i>	778
<i>Using Runas</i>	780
<i>Automatic Connection</i>	780
<i>Windows Identity Impersonation</i>	782
<i>SQL Server Login</i>	783
<i>Changing SQL Server Login Password</i>	784
<i>Connection Management</i>	785
Server	787
SMO Objects	790
<i>Object Identity and URNs</i>	790
<i>GetSmoObject</i>	793
<i>URN Retrieval Restriction</i>	794
<i>SMO Object Model</i>	795
<i>SMO Properties</i>	796
<i>SMO Parent Navigation</i>	800
<i>SMO State</i>	802
Create, Alter, and Drop	802

Scripts	807
Configuration Management	815
Where Are We?	818

16 Notification Services 819

What Is SQL Server Notification Services?	819
Notification Applications	821
Components of SQL Server Notification Services	824
Notification Applications Design Patterns	828
Notification Services Delivery Features	829
Terms Used in Notification Services	829
Designing, Coding, and Generating a Notification Services Application	831
<i>Planning Steps</i>	831
<i>Coding Steps</i>	832
<i>Application Generation Steps</i>	833
A Sample Notification Application	833
Instance and Application Configuration Files	834
<i>Instance Configuration File</i>	835
<i>Application Definition File</i>	839
<i>NSControl</i>	843
Events	846
<i>Event Classes</i>	846
<i>Event Stored Procedures</i>	850
<i>Event Providers</i>	852
<i>Chronicles</i>	857
Subscribers and Subscriptions	858
<i>Subscription Classes</i>	860
<i>Subscribers</i>	862
<i>Subscriptions</i>	865
Notifications	867
Distributor and Formatters	871
Delivery	873
<i>Delivery Protocols</i>	874
<i>Customization</i>	877
Where Are We?	878

17 Wrap-Up: Service-Oriented Database Applications 879

- Lots of New Features: How to Use Them 879
- Data Models, Programming, and SQL Server 880
- Any Functionality at Any Tier 881
- What Are the Best Practices? 882
- Toward a Service-Oriented Database Architecture 891
- The Database As Part of the Platform 894
