

exercise *therapy* prevention and treatment of disease

Edited by
John Gormley and
Juliette Hussey

Blackwell
Publishing

CONTENTS

Preface	xv
Acknowledgements	xvi
Contributors	xvii

SECTION 1

1 Introduction	3
<i>Juliette Hussey</i>	
Exercise as a part of physiotherapy	3
Exercise recommendations for health	4
Physical activity and its health benefits	4
How physical activity levels have decreased	5
The future	6
References	7
Bibliography	8
2 Cardiovascular responses to exercise	9
<i>Christopher Bell and Saoirse E. O'Sullivan</i>	
Introduction	9
Acute exercise	12
Muscle blood flow	12
Systemic circulatory adjustments	13
Pulmonary circulatory adjustments	14
Cardiovascular limitations to acute exercise	15
Limits to heart rate	15
Limits to effective blood volume	16
Limits in women and children	17
Potentially adverse cardiovascular effects of exercise	17
Renal ischaemia	17
Haemolysis	17
Hyperthermia	18
Foetoplacental insufficiency	18
Syncope	18
Hypertension	19
Chronic exercise	19
Blood volume changes	19
Cardiac changes	20

	Blood pressure control	22
	Structural and functional adaptations of the vasculature	22
	Cardiovascular detraining	23
	Exercise in the ageing patient	24
	References	25
	Bibliography	25
3	Exercise and the pulmonary system	27
	<i>Stephen J. Lane and Richard J. Hawksworth</i>	
	Introduction	27
	The external environment and the lung	27
	Structure and function of the lung	28
	Control of ventilation	29
	Respiratory failure	31
	Exercise and the pulmonary system	31
	Changes in the respiratory system with ageing	32
	Respiratory responses to exercise	33
	Dead space	33
	Pulmonary ventilation	34
	Respiratory work	34
	Minute ventilation	34
	Effects of physical activity and training on lung function parameters	35
	References	36
	Bibliography	36
4	Exercise and the musculoskeletal system	37
	<i>Gareth W. Davison, Tony Ashton and Ciara M. Hughes</i>	
	Introduction	37
	SKELETAL MUSCLE	37
	Muscle structure and function	37
	The muscle fibre	38
	Human skeletal muscle	38
	Structure	38
	Skeletal muscle fibre types	40
	Skeletal muscle connective tissue	41
	Muscle innervation by the nervous system	41
	Action potential conduction and synaptic transmission	42
	The neuromuscular junction	44
	Muscle contraction	44
	Skeletal muscle strength and endurance	45
	Muscle strength	45
	Muscle endurance	47

Skeletal muscle adaptations to aerobic exercise training	47
Myoglobin content	47
Mitochondrial volume, size and enzymes	47
Substrate utilisation	47
Skeletal muscle, oxidative stress and antioxidants	48
Oxidative stress and exercise	48
Enzymatic antioxidant defences	51
Non-enzymatic antioxidant defences	51
Summary	52
BONES AND JOINTS	53
Bone and joint structure	53
Anatomy of a bone	53
Bone histology	53
Joint structure	54
Bone and joint adaptations to exercise	54
Summary	56
References	56
5 Exercise in diabetes and obesity	59
<i>Donal O’Gorman and John Nolan</i>	
Introduction	59
Obesity	60
Classification of obesity	60
Aetiology of obesity	61
Obesity, type 2 diabetes and cardiovascular disease	62
Type 2 diabetes	62
Impaired glucose tolerance (IGT) and type 2 diabetes	63
Symptoms of type 2 diabetes	63
Aetiology of type 2 diabetes	63
Complications associated with type 2 diabetes	64
Young type 2 diabetes	65
Exercise for obesity and type 2 diabetes	65
Body weight and energy balance	66
Exercise and weight loss	67
Insulin resistance	68
Exercise in obesity, type 2 diabetes and cardiovascular disease	69
Prevention strategies	70
The Finnish Diabetes Prevention Study	71
The Diabetes Prevention Program	71
Exercise prescription for obese and type 2 diabetes patients	72
Needs analysis and goal setting	72
Screening prior to exercise prescription	72
Exercise prescription in type 2 diabetes	73
A case study of exercise prescription in type 2 diabetes	74

References	75
Bibliography	76

SECTION 2

6 Measurement of physical fitness and habitual physical activity	79
<i>Juliette Hussey</i>	
Introduction	79
Exercise testing	79
Exercise testing in the laboratory	79
Exercise tests in the field/clinical setting	83
Monitoring exercise responses	84
Screening and safety	86
Muscle strength	88
Flexibility	89
Anthropometry	90
Measurement of habitual physical activity	91
Observation	91
Self report/diaries/questionnaires	92
Motion sensors	95
Heart rate monitoring	97
Summary	98
Appendix 6.1	99
References	101
7 Guidelines for exercise prescription	105
<i>Juliette Hussey</i>	
Introduction	105
Safety and pre-participation screening	105
Exercise prescription	106
Principles of exercise prescription for increasing and/or maintaining fitness	108
Intensity	108
Duration	109
Frequency	110
FITT principles	110
Warm up, cool down and stretching	110
Muscle strengthening exercises	111
Guidelines for exercise prescription in the elderly and children	111
Elderly	111
Children and adolescents	112
Exercise prescription for diseases/conditions not referred to elsewhere in this book	114
Renal disease	114
Chronic fatigue syndrome	114

HIV	114
Cancer	115
Psychological well-being	115
Learning disability	115
References	115
Bibliography	117
8 Exercise in the prevention and treatment of cardiovascular disease	118
<i>John Gormley</i>	
Introduction	118
The problem of cardiovascular disease	119
Cardiovascular diseases	119
Diseases of the heart	120
Cerebrovascular disease	121
Peripheral vascular disease	121
Risk factors for cardiovascular disease	121
Non-modifiable risk factors	121
Modifiable risk factors	122
Exercise as a preventative measure for cardiovascular disease	124
Hyperlipidaemia	125
Hypertension	125
Exercise in the treatment of myocardial infarction (cardiac rehabilitation)	125
Exercise test	127
Phase III	129
Phase IV	130
Exercise in the treatment of other cardiovascular disease	130
References	131
Bibliography	134
9 Exercise in the treatment of respiratory disease	135
<i>Brenda O'Neill, Judy M. Bradley and Fidelma Moran</i>	
Introduction	135
The abnormal response to exercise in patients with respiratory disease	135
Evidence of benefit of exercise in respiratory disease	140
Exercise testing and assessment of outcome in respiratory disease	142
Maximal versus sub-maximal exercise tests	142
Clinical laboratory testing in respiratory disease	143
Field exercise tests in respiratory disease	144
Peak tests	144
Sub-maximal tests	145
General principles for exercise testing in respiratory disease	147
Training required	147
Indications for stopping exercise test	148

Other outcome measures used in the evaluation of exercise training for respiratory conditions	149
General principles of exercise training and prescription in respiratory disease	151
Intensity	151
Frequency and duration of exercise sessions	152
Type of exercise	152
Duration of exercise programmes	153
Precautions to exercise in respiratory disease	154
Monitoring during exercise in respiratory patients	154
Pulmonary rehabilitation	155
Special considerations for exercise in respiratory disease	158
Conclusion	163
References	163
Bibliography	168
10 Exercise in the treatment of musculoskeletal disease	169
<i>Fiona Wilson-O'Toole</i>	
Introduction	169
Exercise in the management of inflammatory arthropathies	170
Aerobic training	170
Range of movement exercises	171
Strengthening exercises	172
Flexibility	172
Exercise in water	173
Exercise in the management of osteoporosis	173
Signs and symptoms of osteoporosis	173
Aerobic training	174
Strengthening exercises	174
Flexibility and range of movement exercises	175
Proprioceptive and balance training	175
Exercise in the management of osteoarthritis	176
Signs and symptoms of osteoarthritis	177
Aerobic training	177
Strengthening exercises	178
Flexibility and range of movement exercises	180
Proprioceptive and balance training	180
Exercise in the treatment of low back pain	180
Aerobic training	181
Strengthening exercises	181
Flexibility and range of movement exercises	183
Proprioceptive and balance training	184
References	184

11 Exercise as part of the multidisciplinary management of adults and children with obesity	189
<i>Alison Quinn and Juliette Hussey</i>	
Introduction	189
Understanding obesity	189
Health risks of obesity	190
Treatment of adults with obesity	191
Physiotherapy management of the adult with obesity	192
Exercise prescription	194
Monitoring/review	195
Exercise prescription following surgery	196
Treatment of children with obesity	196
Physiotherapy management of the child	198
The fit/fat debate	200
Prevention of obesity	200
Exercise treatment in type 2 diabetes	200
Exercise treatment in type 1 diabetes	201
References	202
Bibliography	204
12 Exercise in treatment of stroke and other neurological conditions	205
<i>Margaret Brownlee and Brian Durward</i>	
Introduction	205
Stroke	205
Strength deficits in stroke patients	206
Evidence of strength deficits in stroke patients	206
Factors contributing to strength deficits in stroke	207
Measurement of strength	209
Medical Research Council (MRC) Scale	209
Hand held dynamometry (HHD)	209
Isokinetic dynamometry	209
Distribution of weakness in stroke patients	210
Strength training following stroke	211
Strength training and spasticity	211
Effects of strength training	212
Cardiorespiratory deficits in stroke	214
Co-morbid deficits	214
Resultant deficits	215
Measurement of cardiorespiratory fitness	215
Aerobic exercise following stroke	215
Effects of aerobic training	216
Exercise in other neurological conditions	218
Spinal cord injury	218

	Traumatic brain injury	219
	Parkinson's disease	220
	Multiple sclerosis	221
	References	222
	Bibliography	227
13	Adherence to exercise	228
	<i>John Gormley</i>	
	Introduction	228
	The definition of adherence	228
	Patient factors	230
	Age	230
	Gender	230
	Socio-economic group	231
	Fear	231
	Patient perceptions and beliefs	231
	Social support	232
	Programme factors	232
	Personnel	232
	Education	232
	Individualised attention	233
	Group dynamics	233
	Logistics of a programme	234
	The exercise prescription	234
	Frequency	234
	Duration	235
	Intensity	235
	Behavioural change	235
	References	237
	Bibliography	239
14	Promoting physical activity: building sustainable interventions	240
	<i>Lindsey Dugdill and Rebecca Graham</i>	
	Introduction	240
	Rationale for the promotion of physically active lifestyles	241
	Strategies for changing physical activity behaviour	241
	Promoting physical activity in different settings	242
	Socio-ecological models for physical activity promotion	243
	A European perspective on physical activity promotion:	
	HEPA – Health Enhancing Physical Activity	244
	Research case study 1: evaluation of the Liverpool	
	Corporate Cup	245
	Rationale for the corporate series	245
	Development of the corporate series	245

Developing the evidence base: the research design	246
Research findings	246
Research case study 2: evaluation of an adult exercise referral scheme, EXCEL, Sefton, Merseyside	247
Rationale for primary care based exercise promotion	247
EXCEL – Excel to Health exercise referral intervention	248
Research design	248
Research findings	249
GPs' views and opinions on the EXCEL programme	251
Summary of main findings	252
Conclusions	253
Acknowledgements	253
References	253
Index	257
