

Research Methods for Clinical Therapists

APPLIED PROJECT DESIGN AND ANALYSIS

CAROLYN HICKS

FOURTH EDITION

Contents

Preface vii

Acknowledgements xi

SECTION 1 Basic principles of research 1

1. Introduction 3
2. Research design and statistics: some basic concepts 13
3. Questionnaires, surveys and sampling 19
4. The nature of the data 33
5. Techniques of descriptive statistics 41
6. Testing hypotheses 65
7. Designing your study 85
8. Sources of error in research 97
9. Matching the research design to the statistical test 109
10. Putting the theory into practice 123
11. Writing up the research for publication 135
12. Reading published research critically 145

SECTION 2 Statistical tests 151

13. Non-parametric tests for same- and matched-subject designs 153
14. Parametric tests for same- and matched-subject designs 169

15. Non-parametric tests for different- (unrelated-) subject designs 181
16. Parametric tests for different- (unrelated-) subject designs 201
17. Non-parametric and parametric tests for correlational designs 213
18. Estimation 229

SECTION 3 Research applications 239

19. Attitude scales 241
20. Repertory grid analysis 251
21. The Delphi technique 261

APPENDICES

- Appendix 1 Basic mathematical principles 269
- Appendix 2 Statistical probability tables 273
- Appendix 3 Answers to activities 291
- Appendix 4 A sample critique of a published article 303
- Glossary 323
- References, further reading and information sources 331
- Index 333
