Contents

Aid of Scaling Laws in the Achievement of a Well-Controlled Film Deposition Process

Giacomo Messina, Saveria Santangelo 1

A Spectroscopic Approach to Carbon Materials for Energy Storage

Giuseppe Zerbi, Matteo Tommasini, Andrea Centrone,

Luigi Brambilla, Chiara Castiglioni 23

1 Introduction 23

1.1 Carbon-Based Materials 24

2 Prototypical Lattices in Three, Two and One Dimensions 26

2.1 Diamond 26

2.2 Graphite 28

2.3 Polyacetylene 29

2.4 Polyyynes 32

3 A Spectroscopic Approach to Disordered Carbon Materials 33

3.1 1D Systems – Saturated Carbon Materials 33

3.2 Polyconjugated Polymers 34

3.3 2D sp^2 Systems 35

4 Edge Effects in Graphitic Domains for Structure Diagnosis 36

5 Approaching the Structure of Carbonaceous Materials by
Vibrational Spectroscopy: Imagination and Reality 41

5.1 Carbon-Based Materials for Hydrogen Storage 44

6 Conclusions 47

References 48

Index 52

Biocompatibility, Cytotoxicity and Bioactivity of Amorphous Carbon Films

Sandra E. Rodil, René Olivares, Higinio Arzate, Stephen Muhl 55

1 Introduction 55

2 Experimental Details 58

2.1 Film Deposition 58

2.2 Film Characterization 58

2.3 Cell Preparation 59

3	Analysis of the Charge Collection Spectrum	111
3.1	Qualitative Analysis	111
3.2	Quantitative Analysis: The General Model	115
3.3	The Use of Detector Thickness	117
3.4	The Use of Penetration Depth	119
4	Time-Domain Analysis	123
4.1	The Background	123
4.2	Qualitative Analysis	125
4.3	Quantitative Analysis: Computer Simulation	126
5	Temperature Effects: Depumping	129
6	Conclusion	133
	References	133
	Index	135

Effects of Nanoscale Clustering in Amorphous Carbon

J. David Carey, S. Ravi P. Silva	137
1 Introduction and Bonding in Carbon	137
2 Disorder in Amorphous Carbon	139
3 Intracluster Effects in Amorphous Carbon	142
4 Intercluster Interactions in Amorphous Carbon	147
5 Field Emission from Amorphous Carbon	148
6 Conclusions	150
References	150
Index	151

Elastic and Structural Properties of Carbon Materials Investigated by Brillouin Light Scattering

Marco G. Beghi, Carlo S. Casari, Andrea Li Bassi, Carlo E. Bottani ..	153
1 Introduction	153
2 Experimental Technique	156
3 Derivation of the Elastic Constants	158
4 Brillouin Scattering from Carbonaceous Materials	161
5 Ultra-Thin Carbon Films	162
6 Nanotubes	166
7 Conclusions	170
References	170
Index	173

Electrical Resistivity and Real Structure of Magnetron-Sputtered Carbon Films

Alexei A. Onoprienko	175
1 Introduction	175
2 Experimental	176
3 Results and Discussion	177
3.1 Substrate Temperature Effects	177

3.2 Substrate Bias Effects	181
4 Conclusion	184
References	185
Index	186

Formation, Atomic Structures and Properties of Carbon Nanocage Materials

Takeo Oku, Ichihito Narita, Atsushi Nishiwaki, Naruhiro Koi,
Katsuaki Suganuma, Rikizo Hatakeyama, Takamichi Hirata, Hisato

Tokoro, Shigeo Fujii	187
1 Introduction	187
2 Synthesis Methods	189
3 Fullerene Clusters and Metallofullerenes	190
4 Onions and Nanotubes	196
5 Carbon Nanocapsules	200
6 Properties of Carbon Nanomaterials	204
6.1 Photoluminescence of Carbon Nanocapsules	204
6.2 Magnetic Properties of Carbon Nanocapsules	205
6.3 Possibility of H ₂ Gas Storage in Carbon Nanocages	207
6.4 One-Dimensional Self-Organization of Nanocapsules	209
7 Conclusion	212
References	212
Index	215

Hard Amorphous Hydrogenated Carbon Films and Alloys

Fernando L. Freire Jr.	217
1 Introduction	217
2 Film Growth and Chemical Composition	220
3 Film Microstructure	224
4 Mechanical and Nanotribological Properties	229
5 Conclusion	234
References	235
Index	237

Ion Microscopy on Diamond

Claudio Manfredotti	239
1 Introduction	240
2 IBIC	241
3 Lateral IBIC	246
4 IBIL	251
5 XBIC	257
6 Conclusions	263
References	264
Index	265

Measurements of Defect Density Inside CVD Diamond Films Through Nuclear Particle Penetration

Renato Potenza, Cristina Tuvé	267
1 Diamond as Radiation Detector	267
1.1 Properties of Diamond	267
1.2 Lattice Defects in Synthetic Diamond Crystals	269
1.3 Application of Diamond to Beam and Beam Profile Monitoring	271
2 Mechanism of Conduction in Circuits Including Diamond	273
2.1 Modified Hecht's Model for Charge Transport Inside Diamond	275
2.1.1 Absorption of Carriers During Their Transport Along the Electric Field Lines	275
2.1.2 Edge Effects	276
2.2 Effect of Nonuniform Bragg's Deposit of Charge into Diamond	278
2.3 Nonuniform Distributions of Charge and Defects	279
3 Charge Collection Efficiencies of Diamond Detectors Under Ion Bombardment	280
3.1 Experimental Procedure to Measure the Charge Collection Efficiencies	282
3.2 Corrections to the Efficiencies η_{\pm} Needed to Into Take Account the Pulse Height Defect of Diamond for Detectors Heavy Ionizing Particles	283
4 Conclusions	285
References	285
Index	286

Laser Ablation-Deposited CN_x Thin Films

Enza Fazio, Enrico Barletta, Francesco Barreca, Guglielmo Mondio, Fortunato Neri, Sebastiano Trusso	287
1 Introduction	287
2 Experiments	288
3 Results and Discussion	289
4 Conclusion	300
References	301
Index	302

Modeling of the Transport Properties of Diamond Radiation Sensors

Stefano Lagomarsino, Silvio Sciortino	303
1 Models of the Polycrystalline Diamond Band Gap	303
1.1 Band A	304
1.2 Trapping Centers	304
1.3 Carrier Lifetimes and Charge Collection Distance	305
1.4 Location of the Trapping and Recombination Centers in the Diamond Band Gap	306
1.5 Unipolar Conduction	308

XVIII Contents

2	A General Model for Transport Properties of pCVD Diamond: Underlying Assumptions	309
3	Conductivity Under Exposure to Ionizing Radiation	311
4	Thermal Relaxation of Uniform Trap Level Distributions	316
4.1	Radiation Induced Conductivity Transient at Different Fading Times	317
4.2	Persistent Radiation-Induced Conductivity	319
5	Conclusions	323
	References	325
	Index	326

Nucleation Process of CVD Diamond on Molybdenum

Substrates

Giuliana Faggio, Maria G. Donato, Stefano Lagomarsino, Giacomo Messina, Saveria Santangelo, Silvio Sciortino		329
1	Introduction	329
2	Experimental	330
3	Results and Discussion	331
3.1	Raman and Photoluminescence Analysis	331
3.1.1	Discontinuous Samples	332
3.1.2	Continuous Samples	334
3.2	Statistical Study of the Nucleation Process	336
4	Conclusions	340
	References	341
	Index	343

Optical Characterisation of High-Quality Homoepitaxial Diamond

Maria G. Donato, Giuliana Faggio, Giacomo Messina, Saveria Santangelo, G. Verona Rinati		345
1	Introduction	345
2	Experimental	348
3	Results	348
3.1	Optical and SEM Characterisation	348
3.2	Raman Characterisation	350
3.2.1	First-Order Raman Scattering	350
3.2.2	Second-Order Raman Scattering	351
3.3	Photoluminescence Characterisation	352
4	Discussion and Conclusions	355
	References	357
	Index	358

Pulsed Laser Deposition of Carbon Films: Tailoring Structure and Properties

Paolo M. Ossi, Antonio Miotello	359
1 Introduction	359
2 Experimental Details	361
3 Results	362
3.1 Low-Pressure Deposited Films	362
3.2 High-Pressure Deposited Films	367
4 Discussion	373
4.1 Low-Pressure Deposited Films	373
4.2 High-Pressure Deposited Films	376
5 Conclusions	377
References	378
Index	379

Raman Spectra and Structure of sp^2 Carbon-Based Materials: Electron–Phonon Coupling, Vibrational Dynamics and Raman Activity

Chiara Castiglioni, Fabrizia Negri, Matteo Tommasini, Eugenio Di Donato, Giuseppe Zerbi	381
1 Introduction	381
2 Raman Spectra of Polyconjugated Materials	383
3 Electron–Phonon Coupling and Raman Features	385
3.1 Electron–Phonon Coupling in Polyacetylene	385
3.2 Electron–Phonon Coupling in Graphenes	390
3.3 Electron–Phonon Coupling in Carbon Nanotubes	395
4 Conclusions	399
References	400
Index	402

Raman Spectroscopy and Optical Properties of Amorphous Diamond-Like Carbon Films

Leonid Khriachtchev	403
1 Introduction	403
2 Experimental Details	404
3 Raman Diagnostics	405
4 Effects Induced by Interference of Light	409
5 Optical Characterization	413
6 Some Applications	416
7 Conclusions	418
References	419
Index	420

Raman Spectroscopy of CVD Carbon Thin Films Excited by Near-Infrared Light

Margit Koós, Miklós Veres, Sára Tóth, Miklós Füle	423
1 Introduction	423
1.1 The Raman Effect	423
1.2 Raman Spectra of Carbon Materials	426
2 Infrared Excited Raman Spectroscopy of Amorphous Carbon Thin Films	429
2.1 <i>a</i> -C:H Thin Films Prepared from Benzene	429
2.2 <i>a</i> -C:H Thin Layers Prepared From Methane	438
References	443
Index	444

The Role of Hydrogen in the Electronic Structure of Amorphous Carbon: An Electron Spectroscopy Study

Lucia Calliari, Massimiliano Filippi, Nadhira Laidani, Gloria Gottardi, Ruben Bartali, Victor Micheli, Mariano Anderle	447
1 Introduction	447
2 Experimental	449
2.1 Hydrogen Incorporation in the Structure of <i>a</i> -C	449
2.2 Temperature-Induced Hydrogen Evolution from <i>a</i> -C:H	450
3 Hydrogen Incorporation in the Structure of <i>a</i> -C	450
4 Temperature-Induced Hydrogen Evolution from <i>a</i> -C:H	455
5 Concluding Remarks	459
References	461
Index	462

UV-Induced Photoconduction in Diamond

Emanuele Pace, Antonio De Sio, Salvatore Scuderi	463
1 Introduction	463
2 Overview	464
3 Properties of Diamond	467
4 Synthesis of Diamond	468
5 Experimental Methods	470
6 Electro-Optical Properties	472
6.1 Polycrystalline Diamond Detectors	474
6.2 Single-Crystal Diamond Detectors	481
7 Single-Pixel Detectors	485
7.1 Photodetectors	485
7.2 Photoconductor	485
7.3 Photodiode	487
8 Pixel Array Detectors	489
9 Applications	491
9.1 UV Lasers	493
9.2 Photolithography	494

9.3 Space Astronomy	495
10 Conclusions	497
References	498
Index	503

Vibrational Spectroscopy in Ion-Irradiated Carbon-Based Thin Films

Giuseppe Compagnini, Orazio Puglisi, Giuseppe A. Baratta, Giovanni Strazzulla	505
1 Introduction	505
2 Irradiation of Crystalline Carbon and Carbon Alloys	506
3 Irradiation of Hydrocarbons (Oligomers, Polymers and Frozen Gases)	510
4 Irradiation of <i>sp</i> -Rich Amorphous Carbon Phases	513
References	518
