

An Information Systems Approach to Object-Oriented Programming

USING MICROSOFT® VISUAL C#® .NET

Kyle Lutes, Alka Harriger, Jack Purdum

TABLE OF

Contents

PREFACE	xix
READ THIS BEFORE YOU BEGIN	xxvii
CHAPTER ONE	
Introduction to Object-Oriented Programming	1
Brief History of Object-Oriented Programming	2
Using Objects in OOP	3
Using Classes in OOP	3
The OOP Trilogy	4
Encapsulation	4
Polymorphism	5
Inheritance	5
An Example Using Objects	6
Why Learn C#?	7
Using Objects in C#	8
Object Instantiation—Creating Objects from Classes	8
The Dot Operator—Key to Getting Inside the Object	9
The .NET Framework Class Library	12
Summary	13
Key Terms	13
Review Questions	14
Programming Exercises	14
CHAPTER TWO	
Creating a Simple Application	17
Essential Topics	18
Terminology	18
Introduction to Visual Studio .NET	19
Analyzing the Problem and Designing the Solution	20
Creating the Visual Studio Project Files	21
Creating the User Interface Using the Form Designer	26
Using Regions	27
Changing Form Properties	27
Placing Controls on a Form	30
Adding the Application Logic	32
Adding the Program Logic Source Code	32
Program Events	34
Code Explanation	35
Initialization	35
Event Methods	35
Constants and Variables	36
Making the Code Easier to Read	36
Getting the User's Input	37
Validating the User Input	37
Performing the Calculations	38
Displaying the Results to the User	38
Testing the Program	39
Program Errors	39
Debugging	40

Bonus Topics	42
Source Code Format	42
Comments	43
Brace Alignment	43
Visual Studio .NET Project Files	44
MSIL, the CLR, and JIT Compiling	45
Summary	46
Essential Topics	46
Bonus Topics	47
Key Terms	47
Essential Terms	47
Bonus Terms	47
Review Questions	48
Essential Questions	48
Bonus Questions	48
Programming Exercises	49
Essential Exercises	49
Bonus Exercise	49

CHAPTER THREE

Storing Data in Objects

Storing Data in Objects	51
Essential Topics	52
Types of Data Available in C# Programs	52
Numeric Data Types	52
Integer Data Types	52
Monetary Values	56
Floating-Point Numbers	56
Additional Data Types	58
Reference Data Types	59
Storing Textual Data Using the String Data Type	61
Choosing bool or DateTime Types	61
Identifier Naming Rules and Conventions	62
Defining Variables	63
Defining Constants	65
Why Use Constants	66
Bonus Topics	67
The char Data Type	67
What Can a char Store?	67
Special Characters	67
Verbatim Character with String Literals	68
How C# Creates Variables	69
lvalues	70
Define versus Declare	72
Summary	72
Essential Topics	72
Bonus Topics	72
Key Terms	73
Essential Terms	73
Bonus Terms	73
Review Questions	73
Essential Questions	73
Bonus Questions	74
Programming Exercises	74

CHAPTER FOUR**Manipulating Data in Objects****77****Essential Topics****78**

Manipulating Numbers

78

Arithmetic Operators

78

Type Casting

82

Arithmetic Expressions

84

A Program Example

87

User Interface for the Restaurant Bill Calculator Application

88

Restaurant Bill Calculator Logic

89

Initialization

89

Obtaining the User's Input

90

Performing the Calculation

90

Displaying the Results

91

Testing the Restaurant Bill Calculator

91

Improving the Restaurant Bill Calculator

93

Testing the Improved Restaurant Bill Calculator

94

Introduce an Error to Test Debugging

94

Manipulating Strings

95

Concatenation

95

IndexOf Method

96

Length Property

97

Finding Substrings and Parsing

97

ToUpper Method

98

ToLower Method

98

A Program Example

99

Contact Info User Interface

99

Bonus Topics**101**

Other Common Tasks Using the .NET Framework Classes

102

Additional String Methods

102

Insert Method

102

Remove Method

103

Trim Method

103

Replace Method

103

DateTime Manipulations

104

Displaying DateTime Information

104

Retrieving and Manipulating DateTime Information

106

Using the Math Class

107

Math.PI (π)

107

Methods

108

Summary

109

Essential Topics

109

Bonus Topics

110

Key Terms

110

Essential Terms

110

Bonus Terms

110

Review Questions

111

Essential Questions

111

Bonus Questions

112

Programming Exercises

112

Essential Exercises

112

Bonus Exercises

113

CHAPTER FIVE**Changing the Program Flow with Decisions****115****Essential Topics****116**

Boolean Expressions

116

Comparing Numbers

116

Operator Precedence

118

Comparing Non-Numbers

118

Comparing Booleans	119
Comparing Dates and Times	119
Conditional Logical Operators	126
Decision Statements	129
True-Only Conditions	130
True and False Conditions	130
Nested Decisions	131
Cascading Decisions	132
Robust Data Validation	134
A Strategy for Data Validation	134
When Should You Validate Data?	135
What Should You Do When Input Values Are Incorrect?	135
Displaying a Better Message Box	136
Existence Check	138
Data Type Check	138
Range Check	139
Reasonableness Check	139
Code Check	140
Cross-Field Check	141
A Program Example	142
Developing the Application	142
Validating Input Values	144
Testing the Validation Logic	146
Bonus Topics	146
The Switch Statement	146
Alternative Decision Statement Styles	148
Brace Alignment	148
Comparing Boolean Variables to True and False	148
Omitting Braces	149
Early Returns	150
Using System.Globalization for Improved Data Entry	151
Summary	152
Essential Topics	152
Bonus Topics	152
Key Terms	153
Essential Terms	153
Bonus Terms	153
Review Questions	153
Essential Questions	153
Bonus Questions	154
Programming Exercises	155
Essential Exercises	155
Bonus Exercises	156

CHAPTER SIX

Catching Exceptions

157

Essential Topics	158
What Are Exceptions?	158
Types of Errors	160
What Causes Exceptions?	161
Why Catch Exceptions?	163
What to Do When You Catch an Exception	163
Syntax for Exception Handlers	163
Data Type Check	164
A General Exception Handler	169
Syntax for Generalized Exception Handlers	169
When to Catch Exceptions	173
Bonus Topics	176
Catching Exceptions of a Specific Type	177

Throwing Your Own Exceptions	181
Exceptions and the Call Stack	182
Summary	183
Essential Topics	183
Bonus Topics	183
Key Terms	184
Essential Terms	184
Bonus Terms	184
Review Questions	184
Essential Questions	184
Bonus Questions	185
Programming Exercises	186
Essential Exercises	186
Bonus Exercises	186

CHAPTER SEVEN

Adding Methods for Objects	187
Essential Topics	188
What Is a Method?	188
Private Helper Methods	190
Communicating between Methods	192
Scope	192
Parameters	194
Return Values	200
What Constitutes a “Good” Method?	201
A Program Example	202
Passing Reference Data Types	204
A Method for Data Validation	206
When to Use a Method	208
The Call Stack and Methods	210
Bonus Topics	211
Using out Method Arguments	211
Method Overhead	213
Instance versus Shared Methods	216
Signatures	217
Method Overloading	218
Summary	219
Essential Topics	219
Bonus Topics	219
Key Terms	220
Essential Terms	220
Bonus Terms	220
Review Questions	220
Essential Questions	220
Bonus Questions	221
Programming Exercises	221
Essential Exercises	221
Bonus Exercises	222

CHAPTER EIGHT

Program Loops	223
Essential Topics	224
ListBoxes	224
Why Use ListBoxes	224
How to Add an Item to a ListBox	225
How to Determine Which Item in a ListBox Is Selected	226
How to Remove an Item from a ListBox	227
How to Clear the Contents of a ListBox	228
How to Count Items in a ListBox	228

How to Sort Items in a ListBox	229
How to Select an Item in a ListBox	229
A ListBox Program Example	230
Constructing Loops	233
Three Conditions of a Well-Behaved Loop	234
The counting Loop	235
The while Loop	235
The for loop	241
The foreach Loop	243
The break Statement	245
When and Why to Use the break Statement	246
Bonus Topics	247
Writing while Loops with Compound and Complex Conditions	247
Recursion	249
Nested Loops	251
The continue Keyword	253
Summary	255
Essential Topics	255
Bonus Topics	255
Key Terms	256
Essential Terms	256
Bonus Terms	256
Review Questions	256
Essential Questions	256
Bonus Questions	257
Programming Exercises	257
Essential Exercises	257
Bonus Exercises	259

CHAPTER NINE

Arrays and Collections

261

Essential Topics	262
How Arrays Resemble ListBoxes	262
Why Use Arrays?	262
Terminology	263
Single-Dimensional Arrays	266
ArrayLists Defined	282
Sorting ArrayLists	286
Bonus Topics	290
Multidimensional Arrays	290
Other Collection Types	294
Enumerators	295
Hash Tables	295
Queues	299
Stacks	302
Additional Collection Types	304
Summary	305
Essential Topics	305
Bonus Topics	305
Key Terms	306
Essential Terms	306
Bonus Terms	306
Review Questions	306
Essential Questions	306
Bonus Questions	307
Programming Exercises	308
Essential Exercises	308
Bonus Exercises	308

CHAPTER TEN**Encapsulation****309****Essential Topics****310**

Encapsulation Review

310

Creating Your Own Classes

310

Access Specifiers for Methods and Properties

312

Which Access Specifier Is Best?

314

Class User Interfaces

314

How to Determine Whether get or set Is Called

316

Why Not Use the public Keyword for All Class Members?

317

Guidelines for Designing Accessor Methods

317

Setting the Initial State of an Object Variable

319

Data Member Initialization

319

Class Constructors

321

Why Use an Explicit Constructor?

322

Overloaded Constructors

323

Why Method Overloading Is a Good Thing

325

Removing Objects from a Program

325

How the Program Works

335

Storing the Contacts

336

Bonus Topics**337**

Memory Management

337

The Program Stack

337

Out of Scope

338

Managed Heap

339

Freeing Object References

340

Object Reference Goes out of Scope

340

Assigning the Value null

340

Using Destructors

341

Summary

342

Essential Topics

342

Bonus Topics

342

Key Terms

343

Essential Terms

343

Bonus Terms

343

Review Questions

343

Essential Questions

343

Bonus Questions

344

Programming Exercises

344

CHAPTER ELEVEN**Object Persistence Using Data Files****347****Essential Topics****348**

Why Is Object Persistence Needed?

348

The Windows File System

349

Disks

349

Folders

349

Files

350

The .NET System.IO Namespace

352

System.IO.Directory

353

System.IO.File

355

System.IO.Path

356

Types of Files

357

Text and Binary Files

357

Sequential Data Files

359

Persistence Using Sequential Text Files

361

A Program Example	366
Serialization and Persistence	366
Catching Exceptions	371
Bonus Topics	373
File Open and File Save Dialogs	373
Fixed-Width Text Files	377
Reading Fixed-Width Records	379
Writing Fixed-Width Records	381
Persistence Using Binary Data Files	381
Viewing the Contents of a Binary Data File	385
Summary	386
Essential Topics	386
Bonus Topics	387
Key Terms	388
Essential Terms	388
Bonus Terms	388
Review Questions	389
Essential Questions	389
Bonus Questions	389
Programming Exercises	390
Essential Exercises	390
Bonus Exercises	391

CHAPTER TWELVE

User Interface Objects	393
Essential Topics	394
Common Properties, Events, and Methods	394
Anchor Property	394
BackColor and ForeColor Properties	395
Enabled Property	395
Font Property	395
Image Property	396
Left, Top, Width, and Height Properties	396
Locked Property	396
Name Property	396
TabIndex and TabStop Properties	396
Text and TextAlign Properties	397
Visible Property	398
Click and DoubleClick Events	398
Enter and Leave Events	398
KeyDown, KeyPress, and KeyUp Events	399
Focus Method	400
Hide and Show Methods	400
Refresh Method	400
Form Objects	401
The Form Show and ShowDialog Methods	404
Properties for Common Form Styles	405
Label Objects	406
TextBox Objects	406
Button Objects	408
CheckBox Objects	409
ComboBox Objects	409
DateTimePicker Objects	411
GroupBox Objects	412
ListView Objects	412
Adding Columns to a ListView	414
Adding Rows to a ListView	415
Determining Which Rows Are Selected	415
Removing a Row from a ListView	415
Sorting the Contents of a ListView	416

Menu Objects	418
Adding Menus to Forms	418
NumericUpDown Objects	419
RadioButton Objects	420
Timer Objects	421
ToolBar Objects	422
Adding Buttons to a Toolbar	423
StatusBar Objects	424
A Program Example	424
Summary of Changes	425
Interform Communication	426
Bonus Topics	429
User Interface Design Guidelines	429
Special Effects with Forms	431
Printing Reports	432
Objects Used for Printing Reports	433
A Report Example	434
Summary	441
Essential Topics	441
Bonus Topics	442
Key Terms	443
Essential Terms	443
Bonus Terms	443
Review Questions	444
Essential Questions	444
Bonus Questions	445
Programming Exercises	445
Essential Exercises	445
Bonus Exercises	446

CHAPTER THIRTEEN

Database Connectivity with ADO.NET

447

Essential Topics	448
Database Management Systems	448
Relational Databases	448
Relational Database Terminology	449
Introduction to SQL	450
Retrieving Data	452
Inserting Rows	455
Updating Rows	455
Deleting Rows	455
Formatting SQL Statements in Code	456
Database Connectivity Using ADO.NET	459
The ADO.NET OLE DB Data Provider Classes	460
Using ADO.NET with C#	461
The Impedance Mismatch between OOP and Relational Databases	469
A Program Example	470
Bonus Topics	475
Bound Controls	475
Using Bound Controls to Display the Contents of a Database Table	476
Dynamically Creating a Jet Database	482
Data Definition Language (DDL)	484
Adding Tables and Columns to a Table	485
Aggregate Queries	486
Summary	487
Essential Topics	487
Bonus Topics	488
Key Terms	488
Essential Terms	488
Bonus Terms	488

Review Questions	489
Essential Questions	489
Bonus Questions	490
Programming Exercises	490
Essential Exercises	490
Bonus Exercises	491

CHAPTER FOURTEEN

Inheritance and Polymorphism

493

Essential Topics

494

What Is Inheritance?

494

Inheritance and “is a” Relationships

495

Benefits of Inheritance

495

Using Inheritance

496

Using Inheritance—Program Analysis and Design

496

The protected Access Specifier

500

Composite Formatting of String Data

507

The frmMain Code

508

Method Overriding

514

Using Interfaces

515

Interfaces with Properties and Methods

519

Bonus Topics

521

Serializing Objects

521

Writing the Object's State

521

Reading the Object

522

Summary

524

Essential Topics

524

Bonus Topics

525

Key Terms

525

Essential Terms

525

Bonus Terms

525

Review Questions

525

Essential Questions

525

Bonus Questions

526

Programming Exercises

527

Essential Exercises

527

Bonus Exercise

527

APPENDIX A

C# Keywords

529

APPENDIX B

C# Coding Standards and Guidelines

531

Introduction

531

Naming Conventions

531

Variables

531

User Interface Objects

532

Consistency

532

Methods

533

Class and Source Code Files

534

Comments

534

Method Comments

534

Predefined Data Types

535

Format

535

White Space

535

One Statement per Line

536

Indenting

536

Brace Alignment

537

Variable Declaration Placement

538

Type Conversions	538
Decisions	539
Qualified Type Names	540

APPENDIX C

Using the Visual Studio Debugger 541

Types of Program Errors	541
Before You Use the Debugger...	542
Displaying the Debug Toolbar	542
A Sample Program to Debug	543
Setting a Breakpoint	545
The Locals Window	546
The Autos Window	547
Clearing a Breakpoint	548
Single-Stepping a Program	548
Step Into versus Step Over	548
The Watch Window	549
The Command Window	551
Boundary Values	551
Other Windows	552

APPENDIX D

Speed-Coding Tips and Tricks 553

General Tips	553
Using Dynamic Help	554
Code Editor Keyboard Tricks	554

APPENDIX E

Application Deployment 557

✓ Creating a Setup Package Using VS.NET	558
Installing an Application	563

INDEX 565
