

Edited by Heinz-Bernhard Kraatz,
Nils Metzler-Nolte

 WILEY-VCH

Concepts and Models in Bioinorganic Chemistry

Contents

Foreword V

Preface VII

List of Contributors XIX

Abbreviations XXIII

1	The Biodistribution of Metal Ions	1
	<i>Robert J. P. Williams</i>	
1.1	Introduction	2
1.2	Rates of Exchange	5
1.3	The Limitations of Water as a Solvent	5
1.4	Equilibrium: Values of Binding Constants	7
1.5	Quantitative Metal Ion Equilibria: Donor Strength	7
1.6	The Effect of Size and Charge of Metal Ions	8
1.7	The Effect of Electron Affinity	11
1.8	Control over Ligand Concentration	14
1.9	The Compartments of Organisms	16
1.10	Transport	18
1.11	The Irreversible Binding of Fe, Co, Ni, Mg, and Mo (W)	19
1.12	Vanadium, Molybdenum, and Tungsten	20
1.13	Rates of Exchange	21
1.14	Summary	22
	References	23
2	Medicinal Inorganic Chemistry	25
	<i>Katherine H. Thompson and Chris Orvig</i>	
2.1	Introduction	26
2.2	Key Developments	27
2.2.1	Therapeutic Agents	27

2.2.1.1	Arsphenamine: The First Comprehensive Structure–Activity Relationship	28
2.2.1.2	Lithium in Psychiatry: The Dose–Response Relationship	29
2.2.1.3	Cisplatin: Targeted Toxicity	31
2.2.1.4	The Discovery of Essential Trace Elements	32
2.2.1.5	Treatment of Copper- and Iron-Overload Disorders: Metal Ions as Targets	33
2.2.1.6	Radiopharmaceuticals: Utilizing the Nuclear Properties of Metal Ions	34
2.2.2	Diagnostic Agents	35
2.2.2.1	^{99m} Tc-Labeled Diagnostic Agents	36
2.2.2.2	Targeted Myocardial Imaging with ^{99m} Tc-Sestamibi	36
2.2.2.3	⁶⁷ Ga-Citrate Scintigraphy: Computed Tomography	37
2.2.2.4	¹¹¹ In-DTPA-Octreotide-Peptide Binding for Improved Tissue Targeting	37
2.2.2.5	Gadolinium-based MRI Contrast Enhancement	38
2.3	Summary of Key Concepts	39
2.4	Selected Current Research Directions	39
2.4.1	Therapeutic Agents	39
2.4.1.1	Vanadyl Insulin Mimetic Agents: Anticipating Biomolecular Interaction	39
2.4.1.2	Multifunctional Antimalarial Metallopharmaceuticals	40
2.4.1.3	Using Oxidation State to Advantage: Pt(IV) Compounds	41
2.4.2	Diagnostic Agents	41
2.5	Open Questions	42
	References	44

3 The Chemical Toxicology of Metals and Metalloids 47

Graham N. George

3.1	Introduction	48
3.2	Arsenic	48
3.2.1	Dietary Sources of Arsenic	51
3.2.2	Arsenic–Selenium Antagonism: Two Wrongs That Do Make a Right!	52
3.3	Mercury	52
3.3.1	Mercury in Food	55
3.3.2	Mercury–Selenium Antagonism and Synergism	56
3.3.3	Mercury Chelation Therapy	57
3.4	Chromium	58
3.5	The Promise of New Techniques	58
	References	59

4	Theoretical Modeling of Redox Processes in Enzymes and Biomimetic Systems	63
	<i>Arianna Bassan, Tomasz Borowski, Marcus Lundberg, and Per E. M. Siegbahn</i>	
4.1	Introduction	64
4.2	Computational Model	66
4.3	Nonheme Iron Active Sites That Perform Alkane Hydroxylation and Olefin Oxidation	68
4.4	Keto Acid-Dependent Dioxygenases and Their Synthetic Analogues	72
4.5	Copper Complexes in Enzymes and Synthetic Systems	76
4.5.1	Enzymes with Copper Dimer Complexes	76
4.5.2	Enzymes with Copper Monomer Complexes	80
4.6	Manganese Complexes That Oxidize Water to Dioxygen	81
4.6.1	The Electronic Structure of the Highly Oxidized State	84
4.6.2	The O–O Bond-Formation Reaction	86
4.7	Conclusions	88
	References	88
5	Charge Transport in Biological Molecules	93
	<i>Yitao Long and Heinz-Bernhard Kraatz</i>	
5.1	Introduction	94
5.1.1	A Brief History of Biological Electron Transfer	95
5.1.2	Theoretical Considerations	96
5.2	Electron Transfer in Proteins	98
5.2.1	Studies Involving Metal-labeled Proteins	99
5.2.1.1	Redox Properties	100
5.2.1.2	Studies Involving Azurin	100
5.3	Electron Transfer in Peptides	103
5.4	Charge Transfer in DNA	107
5.4.1	Fundamental Properties	107
5.4.2	Molecular Diagnostics	107
5.4.2.1	Sequence Detection	107
5.4.2.2	Protein–DNA Interactions	109
5.5	Summary and Open Questions	110
	References	111
6	Bioorganometallic Chemistry	113
	<i>Nils Metzler-Nolte and Kay Severin</i>	
6.1	Introduction	115
6.2	Organometallic Complexes in Nature	116
6.3	Synthetic Organometallic Complexes with Bioligands	119
6.4	Organometallic Pharmaceuticals	123

6.5	Analytical Bioorganometallic Chemistry	125
6.6	Bioorganometallic Catalysis	130
6.7	Conclusions and Outlook	133
	<i>References</i>	134
7	The Bioinorganic Side of Nucleic Acid Chemistry: Interactions with Metal Ions	137
	<i>Bernhard Lippert and Jens Müller</i>	
7.1	Introduction: Nucleic Acids and Metals	138
7.2	Modeling Metal–Nucleic Acid Interactions	142
7.2.1	Selected “Classical” Aspects	142
7.2.1.1	Metal-Binding Patterns	142
7.2.1.2	Metals at Close Distance	144
7.2.1.3	DNA Distortion by GG Adduct	146
7.2.1.4	Pt Binding and NMR	147
7.2.1.5	Subtle Consequences of Metal Coordination	148
7.2.1.5.1	Effect of Metal Coordination on H Bonding	148
7.2.1.5.2	Nucleobase Acidification	148
7.2.1.5.3	Metals and Nucleobase Tautomerism	149
7.2.1.6	Irreversible Nucleobase Modifications	150
7.2.2	More Recent Developments	151
7.2.2.1	Molecular Squares	151
7.2.2.2	M-DNA	152
7.2.2.3	Metal-Containing Antisense and Antigene Reagents	153
7.2.2.4	Others	154
7.3	Take-Home Message	154
7.4	Open Questions and Perspectives	155
	<i>References</i>	156
8	Nuclease and Peptidase Models	159
	<i>Srecko I. Kirin, Roland Krämer, and Nils Metzler-Nolte</i>	
8.1	Introduction	159
8.2	Mechanistic Considerations	161
8.3	Substrates for Model Studies	163
8.4	Peptidase Models	166
8.5	Nuclease Models	167
8.5.1	Simple Mononuclear Metal Complexes	167
8.5.2	Dinuclear Metal Complexes	168
8.5.3	Metal-Functional Group Cooperation	170
8.6	Applications	172
	<i>References</i>	173

9	Metalloporphyrins, Metalloporphyrinoids, and Model Systems	177
	<i>Bernhard Kräutler and Bernhard Jaun</i>	
9.1	Introduction: Biological Background	178
9.2	Model Systems and Model Compounds to Understand Biological Function	182
9.2.1	Iron Porphyrins: Hemes in Biological Electron Transfer, Oxygen Transport and Activation	188
9.2.1.1	Heme Proteins in Electron Transfer	188
9.2.1.2	Heme Proteins in the Transport and Activation of Small Molecules	189
9.2.2	Nickel Porphinoids: Coenzyme F430 in Biological Methane Formation	193
9.2.2.1	The Redox Chemistry of Coenzyme F430 and its Derivatives	194
9.2.2.2	Structure–Reactivity Relationships for Nickel Porphinoids	195
9.2.2.3	Probing the Reactivity of Ni(I)F430M	197
9.2.2.4	Synthetic Complexes as Models for Coenzyme F430	199
9.2.3	Cobalt Corrinoids: Biological Organometallic Transformations	199
9.2.4	Organometallic B ₁₂ Derivatives and their Organometallic Reactivities	204
9.3	Summary of Key Concepts	207
9.4	Open Questions and the Direction of Future Research	209
	<i>References</i>	209
10	Model Complexes for Vanadium-Containing Enzymes	213
	<i>Dieter Rehder</i>	
10.1	Biological Background and Motivation	214
10.1.1	General Aspects of Vanadium Chemistry Related to Biological Functions	214
10.1.2	Vanadium-Dependent Enzymes	216
10.1.2.1	Haloperoxidases and Vanadate in Phosphoryl Transfer Enzymes	216
10.1.2.2	Vanadium-Nitrogenase	221
10.2	Model Compounds	222
10.2.1	Models of Vanadate-Dependent Haloperoxidases	222
10.2.2	Models of Vanadium-Nitrogenase	227
10.3	Summary of Key Concepts	229
10.4	Open Questions and the Direction of Future Research	230
	<i>References</i>	232

11	Model Complexes for Molybdenum- and Tungsten-Containing Enzymes	237
	<i>John H. Enemark and J. Jon A. Cooney</i>	
11.1	Biological Background and Motivation	238
11.1.1	Introduction	238
11.1.2	Enzyme Active Sites	239
11.1.2.1	Structure	239
11.1.2.2	Spectroscopy	240
11.1.2.3	Reactivity	241
11.1.3	Questions to be Answered by Model Compounds	243
11.2	Model Compounds	244
11.2.1	Background	244
11.2.2	Stabilization of Mononuclear Oxo-Molybdenum Centers	244
11.2.3	Electronic Contributions of Thiolate Ligands	247
11.2.4	Towards Accurate Structural Models	249
11.2.5	Reactivity and Spectroscopic Studies of {MoS ₄ } Centers	250
11.2.6	Computational Models of the XO Family	251
11.3	Summary	251
11.4	Open Questions	252
	<i>References</i>	255
12	Structural and Functional Models for Oxygen-Activating Nonheme Iron Enzymes	259
	<i>Timothy A. Jackson and Lawrence Que, Jr.</i>	
12.1	Biological Background and Motivation	260
12.2	Dinuclear Iron Centers	263
12.3	Diiron Models	266
12.3.1	Structural Models	266
12.3.2	Reactivity with O ₂	268
12.3.3	Oxodiiron Intermediates	270
12.4	Monoiron Active Sites with a 2-His-1-Carboxylate Facial Triad Motif	272
12.4.1	α-Keto-acid-Dependent Enzymes	272
12.4.2	Rieske Dioxygenases	274
12.5	Monoiron Models	275
12.5.1	Functional Models	275
12.5.1.1	αKA-Dependent Enzymes	275
12.5.1.2	Rieske Dioxygenases	277
12.5.2	Oxoiron(IV) Intermediates	280
12.6	Summary of Key Concepts	282
12.7	Open Questions and the Direction of Future Research	283
	<i>References</i>	283

13	Model Chemistry of the Iron-Sulfur Protein Active Sites	287
	<i>George A. Koutsantonis</i>	
13.1	Introduction	288
13.2	Basic Iron and Sulfur Chemistry	290
13.3	Common Iron-Sulfur Geometries	290
13.4	Required Protein and Peptide Coordination Environments	294
13.5	Syntheses of Model Compounds	294
13.5.1	Mononuclear Rubredoxin Models [Fe-4S]	294
13.5.2	Binuclear Ferredoxin Models [2Fe-2S]	295
13.5.3	Trinuclear Analogues [3Fe-4S]	296
13.5.3.1	Linear Analogues [3Fe-4S]	296
13.5.3.2	Cubane-Derived Analogues [3Fe-4S]	296
13.5.3.3	Tetranuclear Cubane Analogues [4Fe-4S]	297
13.5.4	Non-Homoleptic Clusters [4Fe-4S]	298
13.5.5	Models of Nitrogenase Clusters	298
13.5.5.1	FeMoco Analogues	300
13.5.5.2	P-Cluster Analogues	301
13.6	Properties of Analogues and Their Relation to Protein-Bound Clusters	302
13.6.1	Electrochemistry of Model Compounds	303
13.6.2	Oxidation States and Mössbauer Studies	303
	<i>References</i>	304
13.7	Conclusions	304
14	Model Complexes of Ni-Containing Enzymes	309
	<i>Todd C. Harrop and Pradip K. Mascharak</i>	
14.1	Introduction	310
14.2	Urease	310
14.2.1	The Enzyme	310
14.2.2	Models	312
14.3	NiFe Hydrogenase	316
14.3.1	The Enzyme	316
14.3.2	Models	318
14.4	Carbon Monoxide Dehydrogenase/Acetyl Coenzyme A Synthase (CODH/ACS)	320
14.4.1	The Enzyme	320
14.4.2	Models	322
14.5	Conclusions	326
	<i>References</i>	327

15	Hydrogenases and Model Complexes	331
	<i>Robert H. Morris</i>	
15.1	Introduction	332
15.2	What are Hydrogenases?	332
15.3	Nickel-Iron (NiFe-Hase) and Nickel-Iron-Selenium (NiFeSe-Hase) Hydrogenases	335
15.4	Iron-Iron Hydrogenases	338
15.5	Similarities and Differences between NiFe-Hase and FeFe-Hase	341
15.6	Synthetic Complexes that Model Hydrogenases	342
15.6.1	Models of NiFe-Hase Active Sites	343
15.6.1.1	Ni Chemistry	343
15.6.1.2	Hydride and Dihydrogen Chemistry and Electrocatalysis	347
15.6.1.3	Iron Cyanide, Carbonyl Chemistry	349
15.6.1.4	NiFe Bimetallic Model Complexes	352
15.6.2	FeFe-Hase Models	353
15.7	Conclusions	358
15.8	Open Questions and the Direction of Future Research	358
	<i>References</i>	359
16	Model Complexes for Copper-Containing Enzymes	363
	<i>Yunho Lee and Kenneth D. Karlin</i>	
16.1	Introduction	364
16.2	Biological Background: Copper Proteins and Motivation for Biomimetic Studies	365
16.2.1	Copper Ion Properties and Biological Ligands	365
16.2.2	Electron-Transfer Proteins	368
16.2.2.1	Blue Copper Proteins	368
16.2.2.2	Purple Cu _A Centers	369
16.2.3	Dioxygen-Processing Proteins	369
16.2.3.1	Dicopper Sites in Hemocyanin (Hc), Tyrosinase and CO	370
16.2.3.2	Other Oxygenases	371
16.2.3.3	Oxidases	373
16.3	Model Compounds	377
16.3.1	The Synthetic Model Approach for Copper and Cu ^I /O ₂ Chemistry	377
16.3.2	Dicopper O ₂ Chemistry; Models for Cu ₂ O ₂ Proteins	379
16.3.2.1	Side-on Peroxo Core	379
16.3.2.2	End-on Peroxo Core	380
16.3.2.3	Bis(μ-oxo) Core	381
16.3.2.4	Model for Tyrosinase; Aromatic Hydroxylation	382
16.3.3	Galactose Oxidase Models	383
16.3.4	CcO Modeling; Heme-Copper Dioxygen Complexes	385
16.3.5	Blue Copper Type 1 (T1) Models	387

16.4	Summary of Key Concepts	388
16.5	Open Questions and Directions for Future Research	389
16.5.1	Copper-Dioxygen Chemistry	389
16.5.2	Models for Active-Site Crosslinked Amino-Acid Residues	390
16.5.3	Cytochrome <i>c</i> Oxidase Models	390
16.5.4	Blue (T1) and Purple (Cu _A) Models	390
	<i>References</i>	391
17	Model Complexes for Zinc-Containing Enzymes	397
	<i>Nicolai Burzlaff</i>	
17.1	Introduction	398
17.1.1	Coordination Motifs	398
17.1.2	Ligand Geometries	399
17.1.3	Classification of Mononuclear Zinc Peptidases	403
17.2	Mononuclear Zinc Enzymes and Models	405
17.2.1	Zinc Enzymes with a [His ₃] Motif and Their Model Complexes	405
17.2.1.1	Metzincins	405
17.2.1.2	Carbonic Anhydrase	406
17.2.1.3	Zinc Complexes with Hydridotris(pyrazol-1-yl)borate (Tp) Ligands	407
17.2.1.4	Zinc Complexes with Neutral <i>N,N,N</i> Ligands	410
17.2.2	Zinc Enzymes with a 2-His-1-Carboxylate Motif and Their Models	410
17.2.2.1	Gluzincins and Aspzincins	412
17.2.2.2	Carboxypeptidases	413
17.2.2.3	Zinc Complexes with <i>N,N,O</i> Ligands	414
17.2.3	Liver Alcohol Dehydrogenase and Models	417
17.2.4	5-Aminolevulinic Acid Dehydratase and Adenosine Deaminase DNA Repair Protein	420
17.3	Dinuclear Zinc Enzymes and Models	422
17.3.1	Metallo- β -Lactamases	423
17.3.2	Aminopeptidases	425
17.3.3	Alkaline Phosphatases and Purple Acid Phosphatase	426
17.4	Conclusions	429
	<i>References</i>	429
