About the author	xi
I Data approximations	1
1 Classical interpolation methods	3
1.1 Newton interpolation	4
1.1.1 Equidistant Newton interpolation	5
1.1.2 Computational example	7
1.2 Lagrange interpolation	10
1.2.1 Equidistant Lagrange interpolation	10
1.2.2 Computational example	11
1.2.3 Parametric Lagrange interpolation	13
1.3 Hermite interpolation	15
1.3.1 Computational example	17
1.4 Interpolation of functions of two variables with polynomials	19
References	20
2 Approximation with splines	23
2.1 Natural cubic splines	24
2.1.1 Equidistant natural spline approximation	26
2.1.2 Computational example	27
2.2 Bezier splines	28
2.2.1 Rational Bezier splines	32
2.2.2 Computational example	35
2.3 Approximation with B-splines	38
2.3.1 Computational example	39
2.3.2 Nonuniform B-splines	41
2.3.3 Nonuniform rational B-splines	43
2.4 Surface spline approximation	43
2.4.1 Coons surfaces	44
2.4.2 Computational example	48
2.4.3 Bezier surfaces	51
2.4.4 Triangular surface patches	54

2.4.5	Computational example	57
References		59
3	Least squares approximation	61
3.1	The least squares principle	61
3.2	Linear least squares approximation	62
3.3	Polynomial least squares approximation	63
3.4	Computational example	65
3.5	Exponential and logarithmic least squares approximations . .	67
3.6	Nonlinear least squares approximation	68
3.6.1	Computational example	70
3.7	Trigonometric least squares approximation	72
3.7.1	Computational example	74
3.8	Directional least squares approximation	75
3.9	Weighted least squares approximation	76
References		77
4	Approximation of functions	79
4.1	Least squares approximation of functions	79
4.2	Approximation with Legendre polynomials	81
4.2.1	Gram-Schmidt orthogonalization	81
4.2.2	Computational example	84
4.3	Chebyshev approximation	85
4.3.1	Collapsing a power series	88
4.3.2	Computational example	89
4.4	Fourier approximation	90
4.4.1	Computational example	93
4.4.2	Complex Fourier approximation	94
4.5	Padé approximation	96
4.5.1	Computational example	97
References		100
5	Numerical differentiation	101
5.1	Finite difference formulae	101
5.1.1	Three-point finite difference formulae	102
5.1.2	Computational example	105
5.2	Higher order derivatives	106
5.3	Richardson's extrapolation	108
5.3.1	Computational example	110
5.4	Multipoint finite difference formulae	111
References		115

6	Numerical integration	117
6.1	The Newton-Cotes class	117
6.1.1	The trapezoid rule	118
6.1.2	Simpson's rule	119
6.1.3	Computational example	122
6.1.4	Open Newton-Cotes formulae	123
6.2	Advanced Newton-Cotes methods	125
6.2.1	Composite methods	125
6.2.2	Romberg's method	127
6.2.3	Computational example	129
6.3	Gaussian quadrature	130
6.3.1	Computational example	133
6.4	Integration of functions of multiple variables	135
6.4.1	Gaussian cubature	136
6.5	Chebyshev quadrature	136
6.6	Numerical integration of periodic functions	137
	References	139
II	Approximate solutions	141
7	Nonlinear equations in one variable	143
7.1	General equations	143
7.1.1	The method of bisection	143
7.1.2	The secant method	145
7.1.3	Fixed point iteration	147
7.1.4	Computational example	148
7.2	Newton's method	149
7.3	Solution of algebraic equations	153
7.3.1	Sturm sequence	153
7.3.2	Horner's scheme of evaluating polynomials	154
7.3.3	Computational example	155
7.4	Aitken's acceleration	157
7.4.1	Computational example	158
	References	159
8	Systems of nonlinear equations	161
8.1	The generalized fixed point method	161
8.2	The method of steepest descent	163
8.2.1	Computational example	165
8.3	The generalization of Newton's method	167
8.3.1	Computational example	167
8.4	Quasi-Newton method	169
8.4.1	Computational example	170
8.5	Nonlinear static analysis application	171
	References	173

9	Iterative solution of linear systems	175
9.1	Iterative solution of linear systems	175
9.2	Splitting methods	177
9.2.1	Jacobi method	177
9.2.2	Gauss-Seidel method	177
9.2.3	Successive overrelaxation method	178
9.2.4	Computational formulation of splitting methods	179
9.3	Ritz-Galerkin method	180
9.4	Conjugate gradient method	182
9.4.1	Computational example	184
9.5	Preconditioning techniques	185
9.5.1	Approximate inverse	187
9.6	Biconjugate gradient method	188
9.7	Least squares systems	190
9.7.1	QR factorization	191
9.7.2	Computational example	192
9.8	The minimum residual approach	194
9.9	Algebraic multigrid method	196
9.10	Linear static analysis application	198
	References	199
10	Approximate solution of eigenvalue problems	201
10.1	Classical iterations	201
10.2	The Rayleigh-Ritz procedure	203
10.3	The Lanczos method	204
10.3.1	Truncated Lanczos process accuracy	206
10.4	The solution of the tridiagonal eigenvalue problem	207
10.5	The biorthogonal Lanczos method	209
10.5.1	Computational example	210
10.6	The Arnoldi method	215
10.7	The block Lanczos method	216
10.7.1	Preconditioned block Lanczos method	217
10.8	Normal modes analysis application	218
	References	219
11	Initial value problems	221
11.1	Solution of initial value problems	221
11.2	Single-step methods	223
11.2.1	Euler's method	223
11.2.2	Taylor methods	225
11.2.3	Computational example	226
11.2.4	Runge-Kutta methods	227
11.2.5	Computational example	229
11.3	Multistep methods	230
11.3.1	Explicit methods	230

11.3.2	Implicit methods	233
11.3.3	Predictor-corrector technique	233
11.3.4	Gragg's method of extrapolation	235
11.3.5	Computational example	239
11.3.6	Fehlberg's method of step size adjustment	240
11.3.7	Stability of multistep techniques	242
11.4	Initial value problems of ordinary differential equations	242
11.4.1	Computational example	244
11.5	Initial value problems of higher order ordinary differential equations	246
11.5.1	Computational example	247
11.6	Transient response analysis application	248
	References	249
12	Boundary value problems	251
12.1	Boundary value problems of ordinary differential equations . .	251
12.1.1	Nonlinear boundary value problems	252
12.1.2	Linear boundary value problems	252
12.2	The finite difference method for boundary value problems of ordinary differential equations	253
12.3	Boundary value problems of partial differential equations . . .	256
12.4	The finite difference method for boundary value problems of partial differential equations	257
12.4.1	Computational example	260
12.5	The finite element method	264
12.5.1	Finite element shape functions	267
12.5.2	Finite element matrix generation and assembly	268
12.5.3	Computational example	269
12.6	Finite element analysis of three-dimensional continuum	276
12.6.1	Tetrahedral finite element	277
12.6.2	Finite element matrix in parametric coordinates	279
12.6.3	Local to global coordinate transformation	281
12.7	Fluid-structure interaction application	283
