

HARMONICS AND POWER SYSTEMS

FRANCISCO C. DE LA ROSA

Taylor & Francis
Taylor & Francis Group

Contents

Chapter 1	Fundamentals of Harmonic Distortion and Power Quality Indices in Electric Power Systems	1
1.1	Introduction	1
1.2	Basics of Harmonic Theory	2
1.3	Linear and Nonlinear Loads	3
1.3.1	Linear Loads	4
1.3.2	Nonlinear Loads	6
1.4	Fourier Series	9
1.4.1	Orthogonal Functions	12
1.4.2	Fourier Coefficients	13
1.4.3	Even Functions	13
1.4.4	Odd Functions	13
1.4.5	Effect of Waveform Symmetry	14
1.4.6	Examples of Calculation of Harmonics Using Fourier Series	14
1.4.6.1	Example 1	14
1.4.6.2	Example 2	15
1.5	Power Quality Indices under Harmonic Distortion	17
1.5.1	Total Harmonic Distortion	17
1.5.2	Total Demand Distortion	17
1.5.3	Telephone Influence Factor TIF	18
1.5.4	C Message Index	18
1.5.5	$I * T$ and $V * T$ Products	18
1.5.6	K Factor	19
1.5.7	Displacement, Distortion, and Total Power Factor	19
1.5.8	Voltage-Related Parameters	20
1.6	Power Quantities under Nonsinusoidal Situations	20
1.6.1	Instantaneous Voltage and Current	20
1.6.2	Instantaneous Power	21
1.6.3	RMS Values	21
1.6.4	Active Power	21
1.6.5	Reactive Power	21
1.6.6	Apparent Power	21
1.6.7	Voltage in Balanced Three-Phase Systems	22
1.6.8	Voltage in Unbalanced Three-Phase Systems	23
	References	25

Chapter 2	Harmonic Sources	27
2.1	Introduction	27
2.2	The Signature of Harmonic Distortion	28
2.3	Traditional Harmonic Sources	29
2.3.1	Transformers	36
2.3.2	Rotating Machines	37
2.3.3	Power Converters	39
2.3.3.1	Large Power Converters	45
2.3.3.2	Medium-Size Power Converters	45
2.3.3.3	Low-Power Converters	46
2.3.3.4	Variable Frequency Drives	47
2.3.4	Fluorescent Lamps	54
2.3.5	Electric Furnaces	55
2.4	Future Sources of Harmonics	56
	References	58
Chapter 3	Standardization of Harmonic Levels	59
3.1	Introduction	59
3.2	Harmonic Distortion Limits	60
3.2.1	In Agreement with IEEE-519:1992	61
3.2.2	In Conformance with IEC Harmonic Distortion Limits	63
	References	67
Chapter 4	Effects of Harmonics on Distribution Systems	69
4.1	Introduction	69
4.2	Thermal Effects on Transformers	69
4.2.1	Neutral Conductor Overloading	70
4.3	Miscellaneous Effects on Capacitor Banks	70
4.3.1	Overstressing	70
4.3.2	Resonant Conditions	71
4.3.3	Unexpected Fuse Operation	72
4.4	Abnormal Operation of Electronic Relays	73
4.5	Lighting Devices	73
4.6	Telephone Interference	74
4.7	Thermal Effects on Rotating Machines	74
4.8	Pulsating Torques in Rotating Machines	74
4.9	Abnormal Operation of Solid-State Devices	81
4.10	Considerations for Cables and Equipment Operating in Harmonic Environments	81
4.10.1	Generators	81
4.10.2	Conductors	83
4.10.3	Energy-Metering Equipment	83
	References	83

Chapter 5	Harmonics Measurements	85
5.1	Introduction	85
5.2	Relevant Harmonic Measurement Questions	86
5.2.1	Why Measure Waveform Distortion	86
5.2.2	How to Carry out Measurements.....	87
5.2.3	What Is Important to Measure.....	87
5.2.4	Where Should Harmonic Measurements Be Conducted.....	88
5.2.5	How Long Should Measurements Last	88
5.3	Measurement Procedure.....	89
5.3.1	Equipment	89
5.3.2	Transducers	90
5.4	Relevant Aspects	90
	References.....	91

Chapter 6	Harmonic Filtering Techniques	93
6.1	Introduction	93
6.2	General Aspects in the Design of Passive Harmonic Filters	93
6.3	Single-Tuned Filters.....	94
6.3.1	Design Equations for the Single-Tuned Filter.....	96
6.3.2	Parallel Resonant Points	97
6.3.3	Quality Factor	100
6.3.4	Recommended Operation Values for Filter Components.....	101
6.3.4.1	Capacitors	101
6.3.4.2	Tuning Reactor	104
6.3.5	Unbalance Detection	104
6.3.6	Filter Selection and Performance Assessment	104
6.4	Band-Pass Filters.....	105
6.5	Relevant Aspects to Consider in the Design of Passive Filters	107
6.6	Methodology for Design of Tuned Harmonic Filters	108
6.6.1	Select Capacitor Bank Needed to Improve the Power Factor from the Present Level Typically to around 0.9 to 0.95	108
6.6.2	Choose Reactor that, in Series with Capacitor, Tunes Filter to Desired Harmonic Frequency.....	109
6.6.3	Determine Whether Capacitor-Operating Parameters Fall within IEEE-18 ² Maximum Recommended Limits	109
6.6.3.1	Capacitor Voltage.....	109
6.6.3.2	Current through the Capacitor Bank	110
6.6.3.3	Determine the Capacitor Bank Duty and Verify that It Is within Recommended IEEE-18 Limits	110
6.6.4	Test Out Resonant Conditions	110
6.7	Example 1: Adaptation of a Power Factor Capacitor Bank into a Fifth Harmonic Filter	110
6.8	Example 2: Digital Simulation of Single-Tuned Harmonic Filters	113

6.9	Example 3: High-Pass Filter at Generator Terminals Used to Control a Resonant Condition	117
6.10	Example 4: Comparison between Several Harmonic Mitigating Schemes Using University of Texas at Austin HASIP Program	124
	References	129
Chapter 7 Other Methods to Decrease Harmonic Distortion Limits		131
7.1	Introduction	131
7.2	Network Topology Reconfiguration.....	132
7.3	Increase of Supply Mode Stiffness.....	132
7.4	Harmonic Cancellation through Use of Multipulse Converters.....	134
7.5	Series Reactors as Harmonic Attenuator Elements.....	135
7.6	Phase Balancing	136
	7.6.1 Phase Voltage Unbalance	137
	7.6.2 Effects of Unbalanced Phase Voltage.....	137
	Reference	138
Chapter 8 Harmonic Analyses		139
8.1	Introduction	139
8.2	Power Frequency vs. Harmonic Current Propagation.....	139
8.3	Harmonic Source Representation	142
	8.3.1 Time/Frequency Characteristic of the Disturbance.....	142
	8.3.2 Resonant Conditions	147
	8.3.3 Burst-Type Harmonic Representation.....	148
8.4	Harmonic Propagation Facts.....	149
8.5	Flux of Harmonic Currents.....	150
	8.5.1 Modeling Philosophy	151
	8.5.2 Single-Phase vs. Three-Phase Modeling	152
	8.5.3 Line and Cable Models.....	152
	8.5.4 Transformer Model for Harmonic Analysis	153
	8.5.5 Power Factor Correction Capacitors.....	154
8.6	Interrelation between AC System and Load Parameters.....	154
	8.6.1 Particulars of Distribution Systems	156
	8.6.2 Some Specifics of Industrial Installations	157
8.7	Analysis Methods.....	158
	8.7.1 Simplified Calculations	158
	8.7.2 Simulation with Commercial Software	159
8.8	Examples of Harmonic Analysis	160
	8.8.1 Harmonic Current during Transformer Energization	160
	8.8.2 Phase A to Ground Fault	160
	References.....	167

Chapter 9	Fundamentals of Power Losses in Harmonic Environments	169
9.1	Introduction	169
9.2	Meaning of Harmonic-Related Losses	169
9.3	Relevant Aspects of Losses in Power Apparatus and Distribution Systems	171
9.4	Harmonic Losses in Equipment	172
9.4.1	Resistive Elements	172
9.4.2	Transformers	174
9.4.2.1	Crest Factor	174
9.4.2.2	Harmonic Factor or Percent of Total Harmonic Distortion	175
9.4.2.3	K Factor	175
9.5	Example of Determination of K Factor	176
9.6	Rotating Machines	177
	References	179
	Index	181
