V. Y. Ushakov

Insulation of High-Voltage Equipment

Springer

Contents

Preface	V
Part 1 Requirements on Insulation and Methods of Determining the Electric Strength	
Chapter 1 Insulating Materials and System Design Selection	3
1.1 Operational Conditions and Requirements on Insulation	3
1.2 Typical Design of Electrophysical Systems Insulation.....	9
Chapter 2 Insulation and Media Test Techniques	13
2.1 Testing Electric Strength	13
2.2 Lifetime and Treeing Tests	19
Part 2 Short- and Long-Term Electric Strength of Insulating Materials and Media	
Chapter 3 Influence of Dielectric Properties, State, and Electrodes on Electric Strength	27
3.1 Pressure, Density, and Mechanical Stresses	27
3.2 Temperature	42
3.3 Molecular and Supermolecular Structure	60
3.4 Electrode Material	65
3.5 State of the Electrode Surface.....	71
Chapter 4 Influence of Contamination and Structural Defects	83
4.1 Solid Particles	83
4.2 Structural Defects and Impurities in Solid Dielectrics.....	93
4.3 Moisture	97
Chapter 5 Dependence of Electric Strength on the Parameters of Applied Voltage	103
5.1 Voltage Duration	103
5.2 Shape of a Voltage Pulse	113

5.3 Frequency and Periodicity	122
5.4 Voltage Polarity	132
Chapter 6 Influence of Insulation Gap Geometry on Electric Strength	141
6.1 Field Configuration in an Insulation Gap	141
6.2 Interelectrode Gap Length	150
6.3 Electrode Surface Area	156
6.4 Dielectric Volume in an Electric Field	164
Chapter 7 Flashover Voltage at the Interface between Two Dielectric Media	169
7.1 Orientation and Dimensions of an Insulator in an Electric Field.....	169
7.2 Geometry of the Electrodes and the Character of Their Contact with the Insulator	176
7.3 Properties and State of the Insulator Surface and Ambient Medium.....	182
7.4 Parameters of the Applied Voltage.....	191
Chapter 8 Electric Strength of Dielectric Materials in a Hostile Environment	195
8.1 Ionizing Radiation	195
8.2 Electron and Ion Beams.....	204
8.3 Laser and UV Radiation	215
8.4 Magnetic Field.....	227
8.5 Electric Strength of Insulation and Intercontact Medium in Explosive Commutators	234
8.6 Electric Strength of Gases and Liquids in a Flow	244
8.7 Recovery of Electric Strength after Spark and Arc Discharges.....	251
Chapter 9 Methods for Improving the Dielectric Properties of Electric Insulating Materials and Media	265
9.1 Mixing and Injection of Additives and Fillers.....	265
9.2 Radiation Modification.....	283
9.3 Conditioning of the Electrodes and Dielectric Medium	292
9.4 Orientational Extension of Polymers.....	302
9.5 Unconventional Insulation.....	304
Part 3 Insulation Design	
Chapter 10 Methods for Increasing the Working Field Strength of Insulation.....	311
10.1 Electric Field Control	311
10.2 Electrode Coating	335
10.3 Combination Insulating Materials	340

Chapter 11 Calculation of Insulation	351
11.1 Calculations of Short-Term Electric Strength (Static and Voltage– Time Characteristics)	351
11.2 Statistical Characteristics of the Electric Strength and Coordination of Insulation	372
11.3 Calculation of Insulation Reliability and Operating Lifetime.....	378
11.4 Choice of the Working Field Strength.....	385
References	393
Additional References	410
I Vacuum Insulation.....	410
II Gas Insulation.....	411
III Liquid Insulation	413
IV Solid Insulation.....	414
V Composite Insulation	418
VI General Problems of Insulation Design.....	420
