

Artificial Intelligence

for

Computer Games

John David Funge

Contents

Preface	vii
1 Introduction	1
1.1 Computer Game Characters	1
1.2 Behavior	2
1.3 Overview	4
1.4 Artificial Intelligence	7
1.5 Game AI	9
2 Acting	15
2.1 Tag Game	15
2.2 Game-State	16
2.3 Simulator	18
2.4 Controllers	27
2.5 Possible Actions	33
3 Perceiving	35
3.1 Renderer	35
3.2 Simulated Perception	37
3.3 Character-Specific Percepts	39
3.4 Partial Observability	41
3.5 Predictor Percepts	45
4 Reacting	51
4.1 Definition of a Reactive Controller	52
4.2 Simple Functions of Percepts	55
4.3 Reactive Production Rules	57

4.4	Decision Trees	58
4.5	Logical Inference	61
5	Remembering	65
5.1	Definition of a Controller	66
5.2	Memory Percepts	66
5.3	Belief Maintenance	70
5.4	Mental State Variables	74
5.5	Communicating	78
5.6	Stochastic Controllers	80
6	Searching	83
6.1	Discrete Tag Game	83
6.2	Controllers that Use Search	84
6.3	Searching Further Ahead	88
6.4	Searching in Continuous Domains	91
6.5	Waypoints	95
6.6	Adversarial Search	97
6.7	Rendering a Search	102
6.8	General Goal Action Planning	105
7	Learning	107
7.1	Simulated Learning	107
7.2	Definitions	108
7.3	Rewards	111
7.4	Remembering	114
7.5	Reinforcement Learning	116
A	Picking	125
A.1	Picking the Most Likely	125
A.2	Picking Randomly	126
B	Programming	129
	Bibliography	131
	Index	141
