

William G. Pariseau

Design Analysis
in Rock Mechanics

Contents

<i>Preface</i>	xi
<i>Acknowledgments</i>	xv
1 Introduction	1
1.1 <i>A practical design objective</i>	3
1.2 <i>Problem solving</i>	4
1.3 <i>Units</i>	5
1.4 <i>Background information</i>	6
Rock mechanics literature	6
Mechanical properties of rock	7
1.5 <i>Problems</i>	7
Basics	7
Review of stress	8
Review of strain and elasticity	10
2 Slope stability	15
2.1 <i>Translational rock slope failures</i>	18
Planar block slides	18
Safety factor improvement	31
Wedge failures	38
2.2 <i>Rotational slope failures</i>	60
Remedial measures	68
Base failures	70
Toppling failures	72
2.3 <i>Problems</i>	73
Planar block slides	73
Wedge failures	78
Rotational slides	81
Dynamics, toppling	85

3	Shafts	87
3.1	<i>Single unlined naturally supported shafts</i>	87
	Shaft wall stress concentration	88
	Unlined circular shafts	89
	Unlined elliptical shafts	94
	Unlined rectangular shafts	101
	Shaft wall strengths	113
3.2	<i>Shaft wall support and liners</i>	121
	Shaft wall bolting	122
	Circular shaft liners	130
	Circular steel rings	140
3.3	<i>Multiple naturally supported shafts</i>	142
	Circular shafts in a row	142
	Shaft pillar safety	148
	Two circular shafts of different diameter	153
	Elliptical shafts in a row	155
	Rectangular shafts in a row	158
3.4	<i>Problems</i>	162
	Single, naturally supported shafts	162
	Supported shafts, liners, bolts, rings	169
	Multiple shafts	173
4	Tunnels	175
4.1	<i>Naturally supported tunnels</i>	175
	Single tunnels	177
	Single tunnel joints	184
	Multiple tunnels	189
4.2	<i>Tunnel support</i>	194
	Fixed steel sets	194
	Pattern bolting – rock reinforcement	208
	Combination support	212
	Yieldable steel arches	218
	Light segment liner	219
4.3	<i>Problems</i>	220
	Naturally supported tunnels	220
	Supported tunnels	221
	Rock mass classification schemes, RQD	226

5	Entries in stratified ground	229
5.1	<i>Review of beam analysis</i>	229
	Basic beam formulas	230
	Important special cases	234
5.2	<i>Softrock entries</i>	243
	Naturally supported roof	243
	Bolted roof	255
	Point anchored roof bolting	255
	Distributed anchorage roof bolting	261
	Roof trusses	264
5.3	<i>Problems</i>	266
	Naturally supported roof	266
	Bolted roof	268
6	Pillars in stratified ground	277
6.1	<i>Pillars in a single seam</i>	277
	Tributary area, extraction ratio analysis	277
	Size effect on strength	281
6.2	<i>Pillars in dipping strata</i>	289
	Extraction ratio formulas for pillars in dipping seams	289
	An unconventional Mohr's circle representation	293
	Generalized Mohr's circle	298
	Backfill effects on pillar safety factors	300
6.3	<i>Pillars with joints</i>	306
	Flat seam pillars with joints	306
	Dipping seam pillars with joints	310
6.4	<i>Pillars in several seams</i>	315
	Columnized main entry pillars	315
	Staggered chain entry pillars	321
6.5	<i>Barrier pillars</i>	324
6.6	<i>Problems</i>	329
7	Three-dimensional excavations	345
7.1	<i>Naturally supported caverns and stopes</i>	346
	Spheroidal excavations	347
	Cubical and brick-shaped excavations	356
7.2	<i>Joints in cavern and stope walls</i>	363
7.3	<i>Tabular excavations</i>	364

7.4	<i>Cavern and stope support</i>	366
	Hardrock mine fill	367
	Cable bolt support	386
7.5	<i>Problems</i>	390
	3D Caverns	390
	Back fill	391
	Cable bolting	393
8	Subsidence	397
8.1	<i>Chimneys</i>	397
	Chimney cave geometry	398
	Caving rock flow	405
	Chimney cave forces	407
	Chimney cave water forces	417
	Support near caving ground	421
8.2	<i>Troughs</i>	430
	Limit of subsidence	431
	Maximum subsidence	433
	Critical width	433
	NCB subsidence profile	435
	Angle of draw and subsidence factor adjustments	440
	NCB strain profile	444
	Surface damage	451
	Multipanel, multiseam subsidence	455
	Alternative approaches to subsidence	461
8.3	<i>Problems</i>	461
	Chimney caving	461
	Combination support	464
	Subsidence troughs	467
	Appendix A: Background literature	469
	A.1 <i>Books about fundamentals of mechanics</i>	469
	A.2 <i>Books about rock mechanics</i>	470
	A.3 <i>Books containing rock properties</i>	471
	A.4 <i>General sources of rock mechanics information</i>	472
	Appendix B: Mechanical properties of intact rock and joints	473
	B.1 <i>Elastic moduli of intact rock</i>	474
	Young's modulus	474
	Poisson's ratio	477
	Shear modulus	479
	Anisotropy	480

<i>B.2 Strength of intact rock</i>	482
Tensile strength	482
Unconfined compressive strength	485
Compressive strength under confining pressure	495
Mohr–Coulomb strength	497
Hoek–Brown strength	499
Drucker–Prager strength	499
Nonlinear n-type strength	501
Compressive strength test data	501
<i>B.3 Joint stiffness</i>	507
Normal stiffness	508
Shear stiffness	509
<i>B.4 Joint strength</i>	509
<i>B.5 Simple combinations of intact rock and joints</i>	512
Continuously jointed rock mass moduli	514
Discontinuously jointed rock mass moduli	518
Continuously jointed rock mass strengths	520
Discontinuously jointed rock mass strengths	523
Appendix C: Rock mass classification schemes for engineering	529
<i>C.1 Rock quality designation</i>	529
<i>C.2 Terzaghi modified scheme</i>	529
<i>C.3 RSR, RMR, and Q</i>	530
<i>C.4 Comparisons of H_p estimates</i>	531
Appendix D: Some useful formulas	533
<i>D.1 Stress</i>	533
Normal and shear stress on a plane	535
Principal (normal) stresses	536
Principal shear stresses	537
Mohr's circle	538
<i>D.2 Strain</i>	539
Strain rosettes	539
Small strain–displacement relations	541
<i>D.3 Stress–strain relationships, Hooke's law</i>	541
Hooke's law in one dimension – Young's modulus and shear modulus	541
Hooke's law in two-dimensions – plane stress and plane strain	549
<i>References</i>	551
<i>Index</i>	557
