

The background of the cover features a close-up, high-contrast photograph of a drilling rig's bit, showing its complex, multi-ported structure. To the left of the bit, there is a faint, technical diagram consisting of several overlapping circles and intersecting lines, resembling a geological or engineering schematic. The overall color palette is dark, with shades of purple, blue, and grey.

ADVANCED DRILLING Solutions

LESSONS from the FSU
Volume II

CONTENTS

Volume 2

Prefacexi
Acknowledgmentsxiv
4. Development of Directional, Cluster, and Horizontal Drilling Technology Using Downhole Motors	1
Field Application Background of Directional Cluster Turbodrilling	1
Drilling results from the Krasnokamsk Field and other areas of the Urals-Volga oil province (1942–1960)	1
Technology for process control of directional well drilling	10
Drilling cluster directional wells in western Siberia (1965–1980)	20
Dual-bore well drilling	29
Innovations related to cluster well drilling not yet applied	36
Use of Directional Drilling Technology in Oilfields with Tectonic Faults	48
Well drilling results from fields developed by the Grozneft Company	48

ADVANCED DRILLING SOLUTIONS LESSONS FROM THE FSU, VOLUME 2

Results from drilling fields developed by Komineft	60
Results of Drilling Horizontal and Multilateral Wells Using the Hydraulic DHM	62
Introduction	62
Research work and pilot commercial tests for the development of multilateral and horizontal well drilling technology in the FSU: Phase One (1940s–1970s)	63
Extended reach wells (ERW) drilling	75
Horizontal and multilateral drilling technology development: ... Phase Two (1980s)	82
Development and implementation of the cased-borehole sidetracking method	100
Technology and Experience in Drilling Directional,	118
Multilateral, and Horizontal Wells with Electrodrills	118
Developing deflectors and centralizers	118
Development of a telemetric system (STE)	121
Industry use of the STE to drill directional wells	129
Electrodrilling of horizontal and multilateral wells	134
Electrodrilling of underwater crossings for various pipelines	140
Conclusions	145
References	147
5. Deep and Ultra-Deep Well Drilling Technology in the FSU	155
Drilling Experience—Case Studies	155
Deep drilling technology and operations management— analysis and evaluation	155
Drilling technology development and construction of pilot experimental ultra-deep wells	160
Development of Deep Well Drilling Technology	187
with Differential Pressure Control in the Well-to-Formation System	

TABLE OF CONTENTS

Differential pressure (ΔP) control system— advantages and efficiency	187
Development and use of differential pressure control drilling technology in the FSU	190
Application of differential pressure control techniques in AHP conditions—experimental drilling results	199
Application of Rotary-Turbine Drills for Straight Borehole Drilling	213
General information	213
RTB design and principle of operation	214
RTB operations results	217
RTB drilling results in Krivoy Rog SG-8 borehole	219
Results of Urals SG-4 borehole drilling using RTB	222
Underreaming Technology for Deep Complicated Wells Construction	225
Introduction and field of application	225
Existing types and designs of EURs	227
RRB utilization by the industry	232
Results of RRB underreamers operations in the Grozneft Drilling and Production Company	233
Results of RRB underreamers operations in the Prikaspiiburneft Drilling Company	236
Results of RRB underreamers operations in the Azneft Drilling and Production Company	240
RRB operations resume	241
RRB technology prospects—monobore borehole, an undeveloped invention	242
Super-Deep Scientific Boreholes Drilling Experience	245
Introduction	245
General principles of super-deep boreholes drilling in crystalline rocks	251
Borehole design	252

**ADVANCED DRILLING SOLUTIONS
LESSONS FROM THE FSU, VOLUME 2**

Coring	256
Drillstring	265
Borehole path control	272
Bottomhole assemblies	273
Drilling problems and complications	277
Super-Deep Scientific Drilling Outcome	282
General Conclusions	284
References	287
 6. Development of Well Drilling and Completion Technology	291
Using Air, Aerated Mud, and Foam Drilling Methods	
Introduction	291
Drilling Technology with Air and Foam—Mist Development and Application	292
Field Tests and Implementation of Drilling with Aerated Mud Circulation	302
Development and Application of Foam Drilling Techniques	306
Technology Features of Electrodrilling with Gaseous Agents Utilization	311
Experience of Air, Foam, and Aerated Fluid Application When Drilling in Permafrost Conditions	317
Drilling-in the Reservoir Using Gaseous Circulating Agents	321
Basic considerations	321
Drilling-in oil reservoirs	322
Gas field reservoir drilling-in experience	327
Summary	332
Development and Field Application of Gas-Boosting Pumps and Other Special Equipment for Aerated Fluids and Foams Circulation	334
General idea and design principles	334

TABLE OF CONTENTS

Gas-boosting pump application experience in	338
Volga-Urals province	
East Siberia experience with gas-boosting technology	342
Drilling-in reservoir using booster pumps	345
Other booster pump applications and general summary	345
General Conclusions on Gaseous Agents' Application for	348
Well Construction	
References	350
7. Retractable Drillbit Technology—Drilling without Pulling . . .	351
out Drillpipe	
Introduction	351
Historical Review of Drilling with Retractable Bits (RB)	353
Developments outside Russia	353
Developments in the U.S.S.R.	355
Recent developments in Russia	363
RB Design	369
General requirements and classification	369
RB components	371
Retractable diamond reamer design features	377
Designs of industry-manufactured RBs	382
Special Features of Drilling with RBs	385
Drillstring	385
Drilling	388
Tripping operations	390
Coring	393
Offshore coring operations with CCS	396
Fishing Operations	401
RB Test and Field Applications Results	401

ADVANCED DRILLING SOLUTIONS LESSONS FROM THE FSU, VOLUME 2

First test runs and intervals drilled with 12-in. RB	401
(1948–1956)	
Test borehole drilling with 10-in. RB (1957–1964)	407
Oilfield test and industrial drilling (1965–1971)	413
Drilling with casing field test (1974–1975)	417
Scientific test drilling in crystalline rocks of borehole	419
“Sputnik SG-3” (1973–1979)	
Krivoy Rog SG-8 pilot borehole drilling (1985–1986)	433
D/S “Bavenit” scientific drilling campaign in the	436
Atlantic (1991)	445
Offshore stratigraphic drilling (1993)	442
TRB-300 bench test for ODP (1994)	453
Tri-cone retractable bit demonstration test at Maurer	459
Engineering Inc. test facility (1999)	
Conclusion—RB Technology Prospects	463
References	465
Acronyms	469
