TABLE OF CONTENTS

PREFACE	xi
INTRODUCTION	xiii
CHAPTER 1. BASIC MATRIX THEORY AND LINEAR ALGEBRA	1
1.1. Matrix algebra	2
1.1.1. Operations and notations	2
1.1.2. Determinant, inverse	7
1.1.3. Rank, trace	8
1.1.4. Positive definite matrices	12
1.1.5. Factorizations	12
1.1.6. Generalized inverse	15
1.1.7. Problems	19
1.2. Algebra of subspaces	20
1.2.1. Introduction	20
1.2.2. Lattices and algebra of subspaces	21
1.2.3. Disjointness, orthogonality and commutativity	25
1.2.4. Range spaces	34
1.2.5. Tensor spaces	40
1.2.6. Matrix representation of linear operators in vector spaces	45
1.2.7. Column vector spaces	48
1.2.8. Eigenvalues and eigenvectors	51
1.2.9. Eigenstructure of normal matrices	57
1.2.10. Eigenvalue-based factorizations	64
1.2.11. Problems	71
1.3. Partitioned matrices	72
1.3.1. Basic notation and relations	72
1.3.2. The commutation matrix	79
1.3.3. Direct product	80
1.3.4. vec-operator	88
1.3.5. Linear equations	91
1.3.6. Patterned matrices	97
1.3.7. Vectorization operators	114
1.3.8. Problems	119
1.4. Matrix derivatives	121
1.4.1. Introduction	121
1.4.2. Fréchet derivative and its matrix representation	122
1.4.3. Matrix derivatives, properties	126
1.4.4. Derivatives of patterned matrices	135
1.4.5. Higher order derivatives	137
1.4.6. Higher order derivatives and patterned matrices	138
1.4.7. Differentiating symmetric matrices using an alternative derivative	140

1.4.8. Minimal derivatives	146
1.4.9. Tables of derivatives	147
1.4.10. Taylor expansion	150
1.4.11. Integration by parts and orthogonal polynomials	152
1.4.12. Jacobians	155
1.4.13. Problems	169
CHAPTER 2. MULTIVARIATE DISTRIBUTIONS	171
2.1. Moments and cumulants	172
2.1.1. Introduction	172
2.1.2. Basic statistical functions	174
2.1.3. Moments and central moments	175
2.1.4. Cumulants	181
2.1.5. Moments and cumulants of patterned matrices	182
2.1.6. Minimal moments and cumulants	184
2.1.7. Relations between moments and cumulants	187
2.1.8. Problems	190
2.2. The normal distribution	191
2.2.1. Introduction and definition	191
2.2.2. Some properties of the matrix normal distribution	193
2.2.3. Moments of the matrix normal distribution	200
2.2.4. Hermite polynomials	210
2.2.5. Multilinear normal distribution	215
2.2.6. Problems	219
2.3. Elliptical distributions	221
2.3.1. Introduction, spherical distributions	221
2.3.2. Elliptical distributions: definition and basic relations	224
2.3.3. Moments and cumulants	226
2.3.4. Density	229
2.3.5. Elliptical matrix distributions	231
2.3.6. Moments and cumulants of matrix elliptical distributions	234
2.3.7. Problems	236
2.4. The Wishart distribution	237
2.4.1. Definition and basic properties	237
2.4.2. Characteristic and density functions	244
2.4.3. Multivariate beta distributions	248
2.4.4. Partitioned Wishart matrices	253
2.4.5. Moments of the Wishart distribution	256
2.4.6. Cumulants of the Wishart matrix	266
2.4.7. Derivatives of the Wishart density	270
2.4.8. Centered Wishart distribution	272
2.4.9. Problems	275
CHAPTER 3. DISTRIBUTION EXPANSIONS	277
3.1. Asymptotic normality	277
3.1.1. Taylor series of a random vector	277
3.1.2. Asymptotic normality of functions of random vectors	283

3.1.3.	Asymptotic distribution of statistics with functionally dependent arguments	287
3.1.4.	Asymptotic distribution of the sample correlation matrix	289
3.1.5.	Asymptotics of eigenvalues and eigenvectors of a symmetric matrix	292
3.1.6.	Asymptotic normality of eigenvalues and eigenvectors of $\mathbf{S}$	298
3.1.7.	Asymptotic normality of eigenvalues and eigenvectors of $\mathbf{R}$	302
3.1.8.	Asymptotic distribution of eigenprojectors of $\mathbf{S}$ and $\mathbf{R}$	305
3.1.9.	Asymptotic normality of the MANOVA matrix	309
3.1.10.	Asymptotics of Hotelling T^2 -statistic	312
3.1.11.	Problems	316
3.2.	Multivariate formal density expansions in $\mathbb{R}^p$	317
3.2.1.	Introduction	317
3.2.2.	General relation between densities in $\mathbb{R}^p$	317
3.2.3.	Multivariate Edgeworth type expansions	321
3.2.4.	Wishart expansions	323
3.2.5.	Problems	327
3.3.	General multivariate expansions	329
3.3.1.	General relation between two densities	329
3.3.2.	Normal expansions of densities of different dimensions	335
3.3.3.	Wishart expansions for different dimensional densities	341
3.3.4.	Density expansions of $\mathbf{R}$	346
3.3.5.	Problems	353
CHAPTER 4. MULTIVARIATE LINEAR MODELS		355
4.1.	The Growth Curve model and extensions	355
4.1.1.	Introduction	355
4.1.2.	Maximum likelihood estimators	358
4.1.3.	The Growth Curve model with a singular dispersion matrix	366
4.1.4.	Extensions of the Growth Curve model	372
4.1.5.	When are the maximum likelihood estimators unique?	388
4.1.6.	Restrictions on $\mathbf{B}$ in the Growth Curve model	397
4.1.7.	Problems	409
4.2.	Moments and multivariate linear models	410
4.2.1.	Moments of the mean estimator of the Growth Curve model	410
4.2.2.	$E[\hat{\Sigma}]$ and $D[\hat{\Sigma}]$ for the Growth Curve model	417
4.2.3.	Moments of estimators for the $MLNM(\mathbf{ABC} + \mathbf{B}_2\mathbf{C}_2)$	427
4.2.4.	Moments of estimators for the $MLNM(\sum_{i=1}^3 \mathbf{A}_i\mathbf{B}_i\mathbf{C}_i)$	429
4.2.5.	Problems	448
4.3.	Approximations in multivariate linear models	449
4.3.1.	Introduction	449
4.3.2.	Approximation of the density of $\hat{\mathbf{B}}$ in the Growth Curve model	450
4.3.3.	Approximation of the distribution of $\hat{\Sigma}$ in the Growth Curve model	457
4.3.4.	Approximation of the distribution of the mean parameter estimators in the $MLNM(\mathbf{ABC} + \mathbf{B}_2\mathbf{C}_2)$	464

4.3.5. Approximation of the distribution of the mean parameter estimators in the $MLNM(\sum_{i=1}^3 \mathbf{A}_i \mathbf{B}_i \mathbf{C}_i)$	465
4.3.6. Problems	472
