Geographic Information Metadata for Spatial Data Infrastructures

Resources, Interoperability and Information Retrieval

Springer

Contents

1 Spatial Data Infrastructures and related concepts 1
1.1 Introduction 1
1.2 Components of a Spatial Data Infrastructure 3
1.3 Integrating Digital Libraries concepts within Spatial Data Infrastructures 5
1.3.1 Digital Libraries and Geolibraries 5
1.3.2 Digital Libraries versus Spatial Data Infrastructures 8
1.4 Metadata types and standardization initiatives 9
1.4.1 Introduction 9
1.4.2 General purpose metadata standards 10
1.4.3 Metadata schemas for geographic resources 13
1.4.4 Metadata schemas for service description 17
1.5 Technical components of Spatial Data Infrastructures and the role of metadata 18
1.6 Ontologies and Knowledge Representation in the context of Spatial Data Infrastructures 23
1.7 Conclusions 29

2 A metadata infrastructure for the management of nested collections 31
2.1 Introduction 31
2.2 Related work 35
2.2.1 Addressing collections and relations in metadata standards 35
2.2.2 Collections in Digital libraries and Geolibraries 43
2.2.3 Addressing relations in knowledge representation 47
2.3 Defining the desired functionality of a collection enabled catalog system 49
2.4 The Metadata Knowledge Base 55
2.4.1 Building the catalog services over a metadata knowledge base 55

2.4.2 The knowledge base model 57
2.4.3 Automatic generation of metadata 65
2.4.4 Intelligent query answering 72
2.5 Building aggregation relations 82
2.6 Conclusions and future work 85

3 Interoperability between metadata standards 89
3.1 Introduction 89
3.2 Related work 93
3.2.1 Ontology based semantic interoperability 94
3.2.2 Crosswalk based semantic interoperability 96
3.3 Construction of crosswalks between metadata standards 99
3.3.1 Harmonization 100
3.3.2 Semantic mapping 102
3.3.3 Additional rules for metadata conversion 103
3.3.4 Implementation of crosswalks: the use of style sheets ... 106
3.4 Putting the method to work 115
3.4.1 Transformation between CSDGM and ISO 19115 116
3.4.2 Transformation between ISO 19115 and Dublin Core ... 120
3.5 Conclusions and future work 125

4 The use of disambiguated thesauri to improve information retrieval 129
4.1 Introduction 129
4.2 Basic concepts about thesaurus and WordNet 133
4.2.1 Thesaurus 133
4.2.2 WordNet 135
4.3 The Semantic Disambiguation of Thesauri 136
4.3.1 State of the art in Semantic Disambiguation 136
4.3.2 Description of the semantic disambiguation method 142
4.3.3 Testing the method 148
4.4 The information retrieval model 152
4.4.1 State of the art in sense based information retrieval 152
4.4.2 Introduction to the vector-space retrieval model 154
4.4.3 The indexing of metadata records 155
4.4.4 The indexing of queries 157
4.4.5 Testing the retrieval model 158
4.5 Conclusions and future work 166

5 Integrating the concepts within the components of a Spatial Data Infrastructure 169
5.1 Introduction 169
5.2 The catalog services component 171
5.2.1 Introduction 171

5.2.2 Integrating the interoperability between metadata standards ... 173
5.2.3 Integrating the concept based information retrieval ... 176
5.3 A metadata editor ... 178
5.3.1 Introduction ... 178
5.3.2 Import/Export of metadata ... 181
5.3.3 Collection Metadata Edition ... 181
5.3.4 Thesaurus Management ... 185
5.4 The Web Portal of a Spatial Data Infrastructure ... 192
5.5 Conclusions and future work ... 194

6 Conclusions and future work ... 197

A Collections ... 207
A.1 Consistency of the metadata model ... 207
A.2 Metadata Inference ... 217
A.2.1 Generation of complete values ... 217
A.2.2 Update of whole-part hierarchy ... 219
A.2.3 Example of a *wholeInferredValues* specification ... 221

B Crosswalks ... 225
B.1 CSDGM→ISO 19115 stylesheet ... 225
B.2 ISO 19115→DC stylesheet ... 227
B.3 DC→ISO 19115 stylesheet ... 228

C Applications ... 231
C.1 Revision of geographic metadata editors ... 231
C.2 Revision of thesaurus tools ... 236
