MANAGERIAL DECISION MODELING

Ragsdale

Not for Sale in the
United States

Contents

1. Making Decisions Using Models 1

Introduction	1
The Modeling Approach to Decision Making	3
Characteristics and Benefits of Modeling	3
Mathematical Models	4
Categories of Mathematical Models	6
The Problem-Solving Process	7
Anchoring and Framing Effects	9
Good Decisions vs. Good Outcomes	11
Summary	11
References	12
The World of Management Science	12
Questions and Problems	14
Case	14

2. Overview of Optimization 17

Introduction	17
Applications of Mathematical Optimization	17
Characteristics of Optimization Problems	18
Expressing Optimization Problems Mathematically	19
Decisions 19 Constraints 19 Objective 20	
Mathematical Programming Techniques	20
An Example LP Problem	21
Formulating LP Models	21
Steps in Formulating an LP Model	21
Summary of the LP Model for the Example Problem	23
The General Form of an LP Model	23
Solving LP Problems An Intuitive Approach	24
Solving LP Problems: A Graphical Approach	25
Plotting the First Constraint 26 Plotting the Second Constraint 26 Plotting the Third Constraint 27 The Feasible Region 28 Plotting the Objective Function 29 Finding the Optimal Solution Using Level Curves 30 Finding the Optimal Solution by Enumerating the Corner Points 32 Summary of Graphical Solution to LP Problems 32	
Understanding How Things Change	33
Special Conditions in LP Models	34
Alternate Optimal Solutions 34 Redundant Constraints 35 Unbounded Solutions 37 Infeasibility 38	
Summary	39

References	39
Questions and Problems	39
Case	44

3. Linear Programming 45

Introduction	45
Spreadsheet Solvers	45
Solving LP Problems in a Spreadsheet	46
The Steps in Implementing an LP Model in a Spreadsheet	46
A Spreadsheet Model for the Blue Ridge Hot Tubs Problem	48
Organizing the Data 49 Representing the Decision Variables 49 Representing the Objective Function 49 Representing the Constraints 50 Representing the Bounds on the Decision Variables 50	
How Solver Views the Model	51
Using Solver	53
Defining the Set (or Target) Cell 54 Defining the Variable Cells 56 Defining the Constraint Cells 56 Defining the Nonnegativity Conditions 58 Reviewing the Model 59 Options 59 Solving the Model 59	
Goals and Guidelines for Spreadsheet Design	61
Make vs. Buy Decisions	63
Defining the Decision Variables 63 Defining the Objective Function 64 Defining the Constraints 64 Implementing the Model 64 Solving the Model 66 Analyzing the Solution 66	
An Investment Problem	67
Defining the Decision Variables 68 Defining the Objective Function 68 Defining the Constraints 69 Implementing the Model 69 Solving the Model 71 Analyzing the Solution 72	
A Transportation Problem	72
Defining the Decision Variables 72 Defining the Objective Function 73 Defining the Constraints 73 Implementing the Model 74 Heuristic Solution for the Model 76 Solving the Model 76 Analyzing the Solution 77	
A Blending Problem	78
Defining the Decision Variables 79 Defining the Objective Function 79 Defining the Constraints 79 Some Observations About Constraints, Reporting, and Scaling 80 Rescaling the Model 81 Implementing the Model 82 Solving the Model 83 Analyzing the Solution 84	
A Production and Inventory Planning Problem	85
Defining the Decision Variables 85 Defining the Objective Function 86 Defining the Constraints 86 Implementing the Model 87 Solving the Model 89 Analyzing the Solution 90	
A Multi-Period Cash Flow Problem	91
Defining the Decision Variables 91 Defining the Objective Function 92 Defining the Constraints 92 Implementing the Model 94 Solving the Model 96 Analyzing the Solution 96 Modifying The Taco-Viva Problem to Account for Risk (Optional) 98 Implementing the Risk Constraints 100 Solving the Model 101 Analyzing the Solution 102	

Data Envelopment Analysis 102

Defining the Decision Variables 103 Defining the Objective 103 Defining the constraints 103 Implementing the Model 104 Solving the Model 106 Analyzing the Solution 111

Summary 112

References 113

The World of Management Science 113

Questions and Problems 114

Cases 130

4. Sensitivity Analysis 136

Introduction 136

The Purpose of Sensitivity Analysis 136

Approaches to Sensitivity Analysis 137

An Example Problem 137

The Answer Report 138

The Sensitivity Report 140

Changes in the Objective Function Coefficients 140

A Note About Constancy 142 Alternate Optimal Solutions 143 Changes in the RHS Values 143 Shadow Prices for Nonbinding Constraints 144 A Note About Shadow Prices 144 Shadow Prices and the Value of Additional Resources 146 Other Uses of Shadow Prices 146 The Meaning of the Reduced Costs 147 Analyzing Changes in Constraint Coefficients 149 Simultaneous Changes in Objective Function Coefficients 150 A Warning About Degeneracy 151

The Limits Report 151

The Sensitivity Assistant Add-in (Optional) 152

Creating Spider Tables and Plots 153 Creating a Solver Table 155 Comments 158

The Simplex Method (Optional) 158

Creating Equality Constraints Using Slack Variables 158 Basic Feasible Solutions 159 Finding the Best Solution 162

Summary 162

References 162

The World of Management Science 163

Questions and Problems 164

Cases 171

5. Network Flow Models 177

Introduction 177

The Transshipment Problem 177

Characteristics of Network Flow Problems 177 The Decision Variables for Network Flow Problems 179 The Objective Function for Network Flow Problems 179 The Constraints for Network Flow Problems 180 Implementing the Model in a Spreadsheet 181 Analyzing the Solution 182

The Shortest Path Problem 184

An LP Model for the Example Problem 186 The Spreadsheet Model and Solution 186 Network Flow Models and Integer Solutions 188

The Equipment Replacement Problem	189
The Spreadsheet Model and Solution	190
Transportation/Assignment Problems	193
Generalized Network Flow Problems	194
Formulating an LP Model for the Recycling Problem	195
Implementing the Model	196
Analyzing the Solution	198
Generalized Network Flow Problems and Feasibility	199
Maximal Flow Problems	201
An Example of a Maximal Flow Problem	201
The Spreadsheet Model and Solution	203
Special Modeling Considerations	205
Minimal Spanning Tree Problems	208
An Algorithm for the Minimal Spanning Tree Problem	209
Solving the Example Problem	209
Summary	210
References	210
The World of Management Science	211
Questions and Problems	212
Cases	227

6. Integer Programming 232

Introduction	232
Integrality Conditions	232
Relaxation	233
Solving the Relaxed Problem	233
Bounds	235
Rounding	236
Stopping Rules	239
Solving ILP Problems Using Solver	240
Other ILP Problems	243
An Employee Scheduling Problem	243
Defining the Decision Variables	244
Defining the Objective Function	245
Defining the Constraints	245
A Note About the Constraints	245
Implementing the Model	246
Solving the Model	247
Analyzing the Solution	247
Binary Variables	248
A Capital Budgeting Problem	249
Defining the Decision Variables	249
Defining the Objective Function	250
Defining the Constraints	250
Setting Up the Binary Variables	250
Implementing the Model	250
Solving the Model	251
Comparing the Optimal Solution to a Heuristic Solution	253
Binary Variables and Logical Conditions	253
The Fixed-Charge Problem	254
Defining the Decision Variables	255
Defining the Objective Function	255
Defining the Constraints	256
Determining Values for "Big M"	256
Implementing the Model	257
Solving the Model	259
Analyzing the Solution	260
Minimum Order/Purchase Size	261
Quantity Discounts	261
Formulating the Model	262
The Missing Constraints	262

A Contract Award Problem 262

Formulating the Model: The Objective Function and Transportation Constraints 263

Implementing the Transportation Constraints 264 Formulating the Model: The Side Constraints 265 Implementing the Side Constraints 266 Solving the Model 267

Analyzing the Solution 268

The Branch-and-Bound Algorithm (Optional) 268

Branching 269 Bounding 272 Branching Again 272 Bounding Again 272 Summary of B&B Example 274

Summary 274

References 275

The World of Management Science 276

Questions and Problems 276

Cases 291

7. Optimization With Multiple Objectives 296

Introduction 296

Goal Programming 296

A Goal Programming Example 297

Defining the Decision Variables 298 Defining the Goals 298 Defining the Goal Constraints 298 Defining the Hard Constraints 299 GP Objective Functions 300

Defining the Objective 301 Implementing the Model 302 Solving the Model 303

Analyzing the Solution 303 Revising the Model 304 Trade-offs: The Nature of GP 305

Comments about Goal Programming 307

Multiple Objective Optimization 307

An MOLP Example 309

Defining the Decision Variables 309 Defining the Objectives 310 Defining the Constraints 310 Implementing the Model 310 Determining Target Values for the Objectives 311 Summarizing the Target Solutions 313 Determining a GP Objective 314 The MINIMAX Objective 316 Implementing the Revised Model 317 Solving the Model 318

Comments on MOLP 320

Summary 321

References 321

The World of Management Science 321

Questions and Problems 322

Cases 334

8. Nonlinear Optimization 339

Introduction 339

The Nature of NLP Problems 339

Solution Strategies for NLP Problems 341

Local vs. Global Optimal Solutions 342

Economic Order Quantity Models 344

Implementing the Model 347 Solving the Model 348 Analyzing the Solution 349
Comments on the EOQ Model 349

Location Problems 350

Defining the Decision Variables 351 Defining the Objective 351 Defining the Constraints 352 Implementing the Model 352 Solving the Model and Analyzing the Solution 353 Another Solution to the Problem 354 Some Comments About the Solution to Location Problems 354

Nonlinear Network Flow Problem 355

Defining the Decision Variables 356 Defining the Objective 356 Defining the Constraints 357 Implementing the Model 357 Solving the Model and Analyzing the Solution 360

Project Selection Problems 360

Defining the Decision Variables 361 Defining the Objective Function 361 Defining the Constraints 362 Implementing the Model 362 Solving the Model 364

Optimizing Existing Financial Spreadsheet Models 365

Implementing the Model 365 Optimizing the Spreadsheet Model 367 Analyzing the Solution 368 Comments on Optimizing Existing Spreadsheets 368

The Portfolio Selection Problem 368

Defining the Decision Variables 370 Defining the Objective 370 Defining the Constraints 371 Implementing the Model 371 Analyzing the Solution 373
Handling Conflicting Objectives in Portfolio Problems 374

Sensitivity Analysis 376

Lagrange Multipliers 378 Reduced Gradients 379

Solver Options for Solving NLPs 379

Evolutionary Algorithms 380

Beating the Market 382

A Spreadsheet Model for the Problem 382 Solving the Model 383 Analyzing the Solution 384

The Traveling Salesperson Problem 385

A Spreadsheet Model for the Problem 386 Solving the Model 387 Analyzing the Solution 387

Summary 389

References 389

The World of Management Science 389

Questions and Problems 390

Cases 404

9. Linear Regression Models 409

Introduction 409

An Example 409

Regression Models 411

Simple Linear Regression Analysis 412

Defining “Best Fit” 413

Solving the Problem Using Solver 414

Solving the Problem Using the Regression Tool 417

Evaluating the Fit 419

The R^2 Statistic	421
Making Predictions	422
The Standard Error	423
Prediction Intervals for New Values of Y	423
Confidence Intervals for Mean Values of Y	425
A Note About Extrapolation	426
Statistical Tests for Population Parameters	426
Analysis of Variance	427
Assumptions for the Statistical Tests	427
A Note About Statistical Tests	430
Introduction to Multiple Regression	430
A Multiple Regression Example	431
Selecting the Model	433
Models with One Independent Variable	433
Models with Two Independent Variables	434
Inflating R^2	436
The Adjusted- R^2 Statistic	437
The Best Model with Two Independent Variables	437
Multicollinearity	437
The Model with Three Independent Variables	438
Making Predictions	439
Binary Independent Variables	440
Statistical Tests for the Population Parameters	440
Polynomial Regression	441
Expressing Nonlinear Relationships Using Linear Models	442
Summary of Nonlinear Regression	446
Summary	446
References	447
The World of Management Science	447
Questions and Problems	448
Cases	454

10. Categorical Choice Models 459

Introduction	459
The Two-Group DA Problem	460
Group Locations and Centroids	460
Calculating Discriminant Scores	461
The Classification Rule	465
Refining the Cutoff Value	466
Classification Accuracy	467
Classifying New Employees	468
The k -Group DA Problem	469
Multiple Discriminant Analysis	471
Distance Measures	472
MDA Classification	474
Summary	477
References	477
The World of Management Science	478
Questions and Problems	478
Cases	481

11. Forecasting Models 485

Introduction	485
Time Series Methods	486
Measuring Accuracy	486
Stationary Models	487

Moving Averages 488

Forecasting with the Moving Average Model 490

Weighted Moving Averages 492

Forecasting with the Weighted Moving Average Model 493

Exponential Smoothing 494

Forecasting with the Exponential Smoothing Model 496

Seasonality 498**Stationary Data with Additive Seasonal Effects 500**

Forecasting with the Model 502

Stationary Data with Multiplicative Seasonal Effects 504

Forecasting with the Model 507

Trend Models 507

An Example 507

Double Moving Average 508

Forecasting with the Model 510

Double Exponential Smoothing (Holt's Method) 511

Forecasting with Holt's Method 513

Holt-Winter's Method for Additive Seasonal Effects 514

Forecasting with Holt-Winter's Additive Method 517

Holt-Winter's Method for Multiplicative Seasonal Effects 518

Forecasting with Holt-Winter's Multiplicative Method 521

Modeling Time Series Trends Using Regression 522**Linear Trend Model 523**

Forecasting with the Linear Trend Model 525

Quadratic Trend Model 526

Forecasting with the Quadratic Trend Model 528

Modeling Seasonality with Regression Models 528**Adjusting Trend Predictions with Seasonal Indices 529**

Computing Seasonal Indices 530 Forecasting with Seasonal Indices 531 Refining the Seasonal Indices 532

Seasonal Regression Models 534

The Seasonal Model 535 Forecasting with the Seasonal Regression Model 536

Crystal Ball Predictor 538

Using CB Predictor 538

Combining Forecasts 544**Summary 544****References 545****The World of Management Science 545****Questions and Problems 546****Cases 554****12. Simulation 559****Introduction 559****Random Variables and Risk 559**

Why Analyze Risk?	560
Methods of Risk Analysis	560
Best-Case/Worst-Case Analysis	561
What-If Analysis	562
Simulation	562
A Corporate Health Insurance Example	563
A Critique of the Base Case Model	565
Spreadsheet Simulation Using Crystal Ball	565
Starting Crystal Ball	566
Random Number Generators	566
Discrete vs. Continuous Random Variables	569
Preparing the Model for Simulation	570
Defining Assumptions for the Number of Covered Employees	572
Defining Assumptions for the Average Monthly Claim per Employee	574
Defining Assumptions for the Average Monthly Claim per Employee	575
Running the Simulation	576
Selecting the Output Cells to Track	576
Selecting the Number of Iterations	577
Determining the Sample Size	577
Running the Simulation	578
Data Analysis	578
The Best Case and the Worst Case	579
The Distribution of the Output Cell	579
Viewing the Cumulative Distribution of the Output Cells	580
Obtaining Other Cumulative Probabilities	581
Incorporating Graphs and Statistics into a Spreadsheet	581
The Uncertainty of Sampling	581
Constructing a Confidence Interval for the True Population Mean	583
Constructing a Confidence Interval for a Population Proportion	584
Sample Sizes and Confidence Interval Widths	585
The Benefits of Simulation	585
Additional Uses of Simulation	586
A Reservation Management Example	587
Implementing the Model	587
Using the Decision Table Tool	589
An Inventory Control Example	595
Implementing the Model	596
Replicating the Model	600
Optimizing the Model	601
Comparing the Original and Optimal Ordering Policies	603
A Project Selection Example	604
A Spreadsheet Model	605
Solving the Problem with OptQuest	607
Considering Other Solutions	609
A Portfolio Optimization Example	611
A Spreadsheet Model	612
Solving the Problem with OptQuest	615
Summary	616

Cases	632

13. Waiting Line Models 641

Introduction 641

The Purpose of Queuing Models 641

Queuing System Configurations 642

Characteristics of Queuing Systems 643

Arrival Rate 644 Service Rate 645

Kendall Notation 647

Queuing Models 647

The M/M/s Model 648

An Example 649 The Current Situation 650 Adding a Server 650 Economic Analysis 651

The M/M/s Model with Finite Queue Length 652

The Current Situation 653 Adding a Server 653

The M/M/s Model with Finite Population 654

An Example 655 The Current Situation 655 Adding Servers 657

The M/G/1 Model 658

The Current Situation 659 Adding the Automated Dispensing Device 659

The M/D/1 Model 661

Simulating Queues and the Steady-state Assumption 662

Summary 663

References 663

Questions and Problems 665

Cases 671

14. Managing Projects 673

Introduction 673

An Example 673

Creating the Project Network 674

A Note on Start and Finish Points 676

CPM: An Overview 677

The Forward Pass 678

The Backward Pass 680

Determining the Critical Path 682

A Note on Slack 683

Project Management Using Spreadsheets 684

Important Implementation Issue 688

Gantt Charts 688

Project Crashing 691

An LP Approach to Crashing 691 Determining the Earliest Crash Completion Time 693

Implementing the Model 694 Solving the Model 695 Determining a Least Costly Crash Schedule 696 Crashing as an MOLP 698

PERT: An Overview 699

The Problems with PERT 700 Implications 702

Simulating Project Networks 702

An Example 702 Generating Random Activity Times 702 Implementing the Model 704

Running the Simulation 704 Analyzing the Results 706

Microsoft Project 707**Summary 710****References 710****The World of Management Science 710****Questions and Problems 711****Cases 720****15. Theories of Decision Making 724****Introduction 724****Good Decisions vs. Good Outcomes 724****Characteristics of Decision Problems 725****An Example 725****The Payoff Matrix 726**

Decision Alternatives 727 States of Nature 727 The Payoff Values 727

Decision Rules 728**Nonprobabilistic Methods 729**

The Maximax Decision Rule 729 The Maximin Decision Rule 730 The Minimax Regret Decision Rule 731

Probabilistic Methods 733

Expected Monetary Value 733 Expected Regret 735 Sensitivity Analysis 736

The Expected Value of Perfect Information 738**Decision Trees 739****Rolling Back a Decision Tree 740****Using TreePlan 742**

Adding Branches 743 Adding Event Nodes 744 Adding the Cash Flows 748

Determining the Payoffs and EMVs 748 Other Features 749

Multistage Decision Problems 750

A Multistage Decision Tree 751 Developing A Risk Profile 753

Sensitivity Analysis 754

Spider Charts and Tornado Charts 755 Strategy Tables 758

Using Sample Information in Decision Making 760

Conditional Probabilities 761 The Expected Value of Sample Information 762

Computing Conditional Probabilities 763**Bayes's Theorem 765****Utility Theory 766**

Utility Functions 766 Constructing Utility Functions 767 Using Utilities to Make Decisions 770 The Exponential Utility Function 770 Incorporating Utilities in TreePlan 771

Multicriteria Decision Making 772

The Multicriteria Scoring Model 773

The Analytic Hierarchy Process 777

Pairwise Comparisons 777 Normalizing the Comparisons 779 Consistency 780

Obtaining Scores for the Remaining Criteria 781 Obtaining Criterion Weights 782

Implementing the Scoring Model 783

Summary 783
