

*Principles of*

# MOBILE COMMUNICATION

Second Edition

Gordon L. Stüber

# Contents

Preface	xiii
1. INTRODUCTION	1
1.1 Wireless Systems and Standards	3
1.1.1 First Generation Cellular Systems	3
1.1.2 Second Generation Cellular Systems	3
1.1.2.1 GSM/DCS1800/PCS1900	3
1.1.2.2 IS-54/136 and IS-95	5
1.1.2.3 PDC	7
1.1.3 Cordless Telephone Systems	7
1.1.4 Third Generation Cellular Systems	8
1.1.5 Wireless LANs and and PANs	14
1.2 Frequency Reuse and the Cellular Concept	16
1.3 Mobile Radio Propagation Environment	19
1.4 Co-channel Interference and Noise	21
1.5 Receiver Sensitivity and Link Budget	23
1.6 Coverage	28
1.7 Spectral Efficiency and Capacity	30
2. PROPAGATION MODELING	39
2.1 Frequency-Non-Selective (Flat) Multipath-Fading	41
2.1.1 Received Signal Correlation and Spectrum	44
2.1.2 Received Envelope and Phase Distribution	50
2.1.2.1 Rayleigh Fading	50
2.1.2.2 Ricean Fading	51
2.1.2.3 Nakagami Fading	53
2.1.2.4 Envelope Phase	55
2.1.3 Envelope Correlation and Spectra	56
2.1.3.1 Squared-Envelope Correlation and Spectra	60
2.1.4 Level Crossing Rates and Fade Durations	61
2.1.4.1 Envelope Level Crossing Rate	61
2.1.4.2 Zero Crossing Rate	66
2.1.4.3 Average Envelope Fade Duration	66
2.1.5 Spatial Correlations	67

2.1.5.1	Received Signal at the Base Station	68
2.2	Frequency-Selective Multipath-Fading	70
2.2.1	Statistical Channel Correlation Functions	74
2.2.2	Classification of Channels	75
2.2.3	Channel Output Autocorrelation	79
2.3	Laboratory Simulation of Multipath-Fading Channels	80
2.3.1	Filtered Gaussian Noise	80
2.3.2	Sum of Sinusoids Method	81
2.3.3	Multiple Faded Envelopes	85
2.3.4	Simulation of Wide-band Multipath-Fading Channels	90
2.4	Shadowing	98
2.4.1	Laboratory Simulation of Shadowing	99
2.4.2	Composite Shadowing-Fading Distributions	100
2.4.2.1	Composite Gamma-log-normal Distribution	102
2.5	Path Loss Models	103
2.5.1	Path Loss in Macrocells	103
2.5.1.1	Okumura-Hata and CCIR Models	104
2.5.1.2	Lee's Area-to-Area Model	105
2.5.2	Path Loss in Outdoor Microcells	108
2.5.2.1	COST231-Hata Model	108
2.5.2.2	COST231-Walfish-Ikegami Model	109
2.5.2.3	Street Microcells	111
2.5.3	Path Loss in Indoor Microcells	114
3.	CO-CHANNEL INTERFERENCE	127
3.1	Multiple Log-normal Interferers	129
3.1.1	Fenton-Wilkinson Method	130
3.1.2	Schwartz-and Yeh-Method	132
3.1.3	Farley's Method	134
3.1.4	Numerical Comparisons	135
3.2	Probability of Outage	135
3.3	Multiple Ricean/Rayleigh Interferers	139
3.4	Multiple Log-normal Nakagami Interferers	140
3.4.1	Statistically Identical Interferers	142
3.5	Multiple Log-normal Ricean/Rayleigh Interferers	146
3.5.1	Single Interferer	148
3.5.2	Multiple Interferers	148
4.	MODULATED SIGNALS AND THEIR POWER SPECTRA	153
4.1	Representation of Band-pass Modulated Signals	154
4.1.1	Vector Space Representations	155
4.1.2	Gram-Schmidt Procedure	156
4.1.3	Signal Energy and Correlations	159
4.2	Nyquist Pulse Shaping	161
4.3	Quadrature Amplitude Modulation (QAM)	165
4.4	Phase Shift Keying (PSK)	168
4.4.1	Offset QPSK (OQSPK)	169

4.4.2	$\pi/4$ -DQPSK	171
4.5	Orthogonal Modulation and Variants	172
4.6	Orthogonal Frequency Division Multiplexing (OFDM)	175
4.6.1	Multiresolution Modulation	177
4.6.2	FFT-Based OFDM System	177
4.7	Continuous Phase Modulation (CPM)	182
4.7.1	Full Response CPM	183
4.7.1.1	Minimum Shift Keying (MSK)	184
4.8	Partial Response CPM	186
4.8.1	Gaussian Minimum Shift Keying (GMSK)	189
4.8.2	Linearized GMSK (LGMSK)	192
4.8.3	Tamed Frequency Modulation (TFM)	195
4.9	Power Spectral Densities of Digitally Modulated Signals	198
4.9.1	Psd of a Complex Envelope	199
4.9.2	Psd of QAM	205
4.9.3	Psd of PSK	206
4.9.4	Psd of OQPSK	206
4.9.5	Psd of $\pi/4$ -DQPSK	207
4.9.6	Psd of OFDM	208
4.9.7	Psd of Full Response CPM	211
4.9.7.1	Psd of CPFSK	215
4.9.7.2	Psd of MSK	217
4.9.8	Psd of GMSK and TFM	218
5.	DIGITAL SIGNALING	
	ON FLAT FADING CHANNELS	227
5.1	Vector Space Representation of Received Signals	228
5.2	Detection of Known Signals in Additive White Gaussian Noise	230
5.3	Probability of Error	234
5.3.1	Pairwise Error Probability	236
5.3.2	Upper Bounds on Error Probability	237
5.3.3	Lower Bound on Error Probability	239
5.3.4	Bit Versus Symbol Error Probabilities	239
5.4	Error Probability of PSK	240
5.5	Error Probability of M-QAM	246
5.6	Error Probability of Orthogonal Signals	249
5.7	Error Probability of OFDM	252
5.8	Error Probability of MSK	256
5.9	Differential Detection	258
5.9.1	Differential Detection of $\pi/4$ -DQPSK	261
5.10	Non-coherent Detection	262
5.11	Detection of CPM Signals	267
5.11.1	Coherent CPM Demodulator	268
5.11.2	Non-coherent CPM Demodulator	268
6.	ANTENNA DIVERSITY	275
6.1	Diversity Combining	276

6.2	Selective Combining	277
6.3	Maximal Ratio Combining	280
6.4	Equal Gain Combining	284
6.5	Switched Combining	286
6.6	Differential Detection with Equal Gain Combining	290
6.7	Transmitter Diversity	291
6.7.1	Space-Time Transmit Diversity	293
7.	<b>EQUALIZATION AND INTERFERENCE CANCELLATION</b>	301
7.1	Overview	302
7.1.1	Symbol-by-symbol Equalizers	302
7.1.2	Sequence Estimation	304
7.1.3	Co-Channel Interference Cancellation	306
7.2	Modeling of ISI Channels	307
7.2.1	Vector Representation of Received Signals	309
7.3	Optimum Receiver for ISI Channels with AWGN	310
7.3.1	Discrete-Time White Noise Channel Model	311
7.3.1.1	Time Varying Channels with Diversity	314
7.3.1.2	$T/2$ -Spaced Receiver	315
7.4	Symbol-by-Symbol Equalizers	317
7.4.1	Linear Equalizer	319
7.4.1.1	Zero-Forcing (ZF)	319
7.4.1.2	Minimum Mean-Square-Error (MMSE)	322
7.4.2	Decision Feedback Equalizer (DFE)	326
7.4.3	Comparison of Symbol-by-Symbol Equalizers	329
7.5	Sequence Estimation	329
7.5.1	MLSE and the Viterbi Algorithm	329
7.5.1.1	Adaptive MLSE Receiver	335
7.5.1.2	$T/2$ -spaced MLSE Receiver	337
7.5.2	Delayed Decision-Feedback Sequence Estimation	337
7.5.3	Reduced-State Sequence Estimation	340
7.6	Error Probability for MLSE on ISI Channels	341
7.6.1	Static ISI Channels	344
7.6.2	Fading ISI Channels	346
7.6.3	Computing the Union Bound	349
7.6.3.1	Error-State Diagram	350
7.6.3.2	The Stack Algorithm	351
7.6.4	Examples	352
7.7	Error Probability for $T/2$ -spaced MLSE Receiver	355
7.7.1	$T$ -spaced MLSE Receiver	355
7.7.2	$T/2$ -spaced MLSE Receiver	357
7.7.3	Practical $T/2$ -spaced MLSE Receiver	359
7.7.4	Timing Phase Sensitivity	361
7.8	MIMO MLSE Receivers	362
7.8.1	System and Channel Model	363
7.8.2	Joint Maximum Likelihood Sequence Estimation	364

7.8.3	Discrete-time MIMO Channel Model	366
7.8.4	The Viterbi Algorithm	370
7.8.5	Pairwise Error Probability	370
7.8.6	$T/2$ -Spaced MIMO MLSE Receiver	371
7.8.6.1	Error Probability	373
7.8.6.2	Timing Phase Sensitivity	374
7.8.6.3	Practical Receiver	376
7.8.7	Interference Rejection Combining MLSE	378
7.8.8	Examples	381
8.	<b>ERROR CONTROL CODING</b>	391
8.1	<b>Block Codes</b>	394
8.1.1	<b>Binary Block Codes</b>	394
8.1.1.1	Minimum Distance	395
8.1.1.2	Syndromes	396
8.1.1.3	Error Detection	396
8.1.1.4	Weight Distribution	397
8.1.1.5	Probability of Undetected Error	397
8.1.1.6	Error Correction	398
8.1.1.7	Standard Array Decoding	398
8.1.1.8	Syndrome Decoding	399
8.2	<b>Convolutional Codes</b>	399
8.2.1	Encoder Description	399
8.2.2	State and Trellis Diagrams, and Weight Distribution	402
8.2.3	Recursive Systematic Convolutional (RSC) Codes	405
8.3	<b>Trellis Coded Modulation</b>	407
8.3.1	Encoder Description	407
8.3.2	Mapping by Set Partitioning	408
8.4	<b>Coded Performance on AWGN Channels</b>	412
8.4.1	Union Bound for Convolutional Codes	413
8.5	<b>Coded Performance on Interleaved Flat Fading Channels</b>	417
8.5.1	Design Rules for TCM on Flat Fading Channels	422
8.5.1.1	Multidimensional TCM	423
8.5.1.2	Multiple TCM (MTCM)	424
8.5.1.3	2-D Trellis Codes	426
8.6	<b>Coded Performance on ISI Channels</b>	427
8.6.1	TCM on Static ISI Channels	429
8.6.2	TCM on Noninterleaved Fading ISI Channels	429
8.6.3	Examples	431
8.6.3.1	Static ISI Channels	431
8.6.3.2	Multipath Fading ISI Channels	433
8.6.4	Evaluation of Union Bounds for TCM	436
8.7	<b>Turbo Codes</b>	443
8.7.1	PCCC Encoder	444
8.7.2	PCCC Decoder	446
8.7.3	SCCC Encoder and Decoder	448
8.7.4	Weight Distribution	448
8.7.4.1	Weight Distribution of PCCCs	450

8.7.4.2	Weight Distribution of SCCCs	453
9.	SPREAD SPECTRUM TECHNIQUES	457
9.1	Basic Principles of Spread Spectrum	459
9.1.1	Direct Sequence (DS) Spread Spectrum	459
9.1.2	Frequency Hop (FH) Spread Spectrum	462
9.2	Spreading Sequences	464
9.2.1	Spreading Waveforms	466
9.2.2	<i>m</i> -sequences	467
9.2.3	Gold Sequences	469
9.2.4	Kasami Sequences	471
9.2.5	Barker Sequences	472
9.2.6	Walsh-Hadamard Sequences	473
9.2.6.1	Orthogonal and Bi-orthogonal Modulation	473
9.2.7	Variable Length Orthogonal Codes	474
9.2.8	Complementary Code Keying (CCK)	475
9.3	Power Spectral Density of DS Spread Spectrum Signals	475
9.4	Performance of DS/QPSK in Tone Interference	478
9.5	DS Spread Spectrum on Frequency-Selective Fading Channels	491
9.5.1	RAKE Receiver	495
9.6	Error Probability for DS CDMA on AWGN Channels	501
9.6.1	Standard Gaussian Approximation	505
9.6.2	Improved Gaussian Approximation	506
9.6.3	Simplified Gaussian Approximation	507
10.	TDMA CELLULAR ARCHITECTURES	515
10.1	Cell Sectoring	516
10.1.1	Cell Sectoring with Wide-beam Directional Antennas	516
10.1.2	Sectoring with Switched-beam Antennas	518
10.1.3	Trunkpool Techniques	520
10.1.4	Cellular Performance with Switched-beam Antennas	522
10.1.4.1	Reverse Channel	523
10.1.4.2	Forward Channel	524
10.1.4.3	Performance Criteria and Results	524
10.2	Conventional Cell Splitting	528
10.2.1	Reuse Partitioning	530
10.2.1.1	Cell Splitting with Reuse Partitioning	532
10.3	Cluster Planned Hierarchical Architecture	532
10.3.1	System Architecture	533
10.3.2	Underlaid Microcell Planning Algorithm	534
10.3.3	Performance Analysis of Cluster Planned Architecture	539
10.3.3.1	Macrocell Performance	540
10.3.3.2	Microcell Performance	545
10.3.3.3	Adjacent Channel Interference Analysis	553
10.4	Macrodiversity Architectures	554
10.4.1	Probability of Co-channel Interference Outage	556
10.4.2	Shadow Correlation	557
10.4.3	Numerical Examples	559

11.CDMA CELLULAR ARCHITECTURES	567
11.1 Capacity of Cellular CDMA	568
11.1.1 Reverse Link Capacity	570
11.1.2 Forward Link Capacity	577
11.1.3 Imperfect Power Control	578
11.2 Error Probability with RAKE Reception	580
11.2.1 Maximal Ratio Combining	583
12.LINK QUALITY MEASUREMENT AND HANDOFF INITIATION	589
12.1 Signal Strength Based Hard Handoff Algorithms	595
12.2 Pilot-to-Interference Ratio Based Soft Handoff Algorithms	597
12.3 Signal Strength Averaging	598
12.3.1 Choosing the Proper Window Length	599
12.3.2 Choosing the Proper Number of Samples to Average	601
12.4 Velocity Estimation in Cellular Systems	604
12.4.1 Level Crossing Rate Estimators	606
12.4.2 Covariance Approximation Methods	608
12.4.3 Velocity Estimator Sensitivity	611
12.4.3.1 Effect of the Scattering Distribution	612
12.4.3.2 Effects of Additive Gaussian Noise	615
12.5 Velocity Adaptive Handoff Algorithms	617
12.5.1 Effect of $N_{\lambda}$	618
12.5.2 Corner Effects and Sensitivity to $a$ and $W_l$	619
12.5.3 Velocity Adaptive Handoff Performance	620
12.6 Hard Handoff Analysis	621
12.6.1 Simulation Results	626
12.7 Soft Handoff Analysis	627
12.7.1 Simulation Results	629
12.8 CIR-based Link Quality Measurements	631
12.8.1 Discrete-Time Model for Signal Quality Estimation	632
12.8.1.1 Estimation of $(I+N)$	633
12.8.1.2 Estimation of $C/(I+N)$	635
12.8.2 Training Sequence Based $C/(I+N)$ Estimation	636
12.9 Summary	638
13.CHANNEL ASSIGNMENT TECHNIQUES	645
13.1 Centralized DCA	650
13.1.1 Maximum Packing (MP)	650
13.1.2 MAXMIN Scheme	652
13.2 Decentralized DCA	653
13.2.1 First Available (FA) and Nearest Neighbor (NN)	653
13.2.2 Dynamic Resource Acquisition (DRA)	654
13.3 Fully Decentralized DCA	655
13.3.1 Channel Segregation (CS)	655
13.3.2 Channel Segregation with Variable Threshold	655
13.3.3 Minimum Interference (MI) Schemes	657

13.3.4	Aggressive and Timid DCA Strategies	657
13.4	Hybrid FCA/DCA Schemes	659
13.5	Borrowing Schemes	660
13.5.1	Borrowing with Channel Ordering (BCO)	660
13.5.2	Borrowing with Directional Locking	662
13.5.3	Borrowing without Locking	663
13.5.4	Compact Pattern Based DCA	664
13.6	Directed Retry and Directed Handoff	665
13.7	Moving Direction Strategies	665
13.8	Reduced Transceiver Coverage	666
13.8.1	Reuse Partitioning	666
13.9	Handoff Priority	667
13.10	Example DCA Schemes for TDMA Systems	668
13.10.1	The Simple DCA (SDCA) Strategy	670
13.10.2	A Queueing DCA Strategy	670
13.10.3	An Aggressive DCA Strategy	673
13.10.4	Simulation Model, Results, and Discussion	676
13.11	Concluding Remarks	682
Appendix A	Probability and Random Processes	685
A.1	Conditional Probability and Bayes' Theorem	685
A.2	Means, Moments, and Moment Generating Functions	687
A.3	Some Useful Probability Distributions	688
A.3.1	Discrete Distributions	688
A.3.2	Continuous Distributions	689
A.4	Upper Bounds on the cdfc	694
A.5	Random Processes	697
A.5.1	Moments and Correlation Functions	698
A.5.2	Crosscorrelation and Crosscovariance	703
A.5.3	Complex-Valued Random Processes	705
A.5.4	Power Spectral Density	706
A.5.5	Random Processes Filtered by Linear Systems	707
A.5.6	Discrete-time Random Processes	709
A.5.7	Cyclostationary Random Processes	711
