Contents

<i>Acknowledgements</i>	x
1 Introduction	1
1.1 <i>Historical developments of alkali-activated cements and concretes</i>	1
1.2 <i>Applications and specifications</i>	2
1.3 <i>Future prospect of alkali-activated cements and concretes</i>	3
1.4 <i>Organization of this book</i>	5
2 Alkaline activators	6
2.1 <i>Introduction</i>	6
2.2 <i>Caustic soda</i>	6
2.3 <i>Sodium carbonate (soda ash)</i>	9
2.4 <i>Sodium silicate</i>	14
2.5 <i>Sodium sulphate</i>	26
2.6 <i>Summary</i>	29
3 Cementing components	30
3.1 <i>Introduction</i>	30
3.2 <i>Blast furnace slag</i>	30
3.3 <i>Granulated phosphorus slag</i>	42
3.4 <i>Steel slag</i>	44
3.5 <i>Pozzolans</i>	51
3.6 <i>Summary</i>	63
4 Hydration and microstructure of alkali-activated slag cements	64
4.1 <i>Introduction</i>	64
4.2 <i>Heat of hydration</i>	64

4.3	<i>Degree of hydration of slag in alkali-activated slag cement</i>	75
4.4	<i>Non-evaporable water</i>	78
4.5	<i>Silicate polymerization</i>	79
4.6	<i>Kinetics of hydration</i>	80
4.7	<i>Hydration products</i>	82
4.8	<i>Microstructure development</i>	87
4.9	<i>Pore solution chemistry</i>	95
4.10	<i>C-S-H in alkali-activated slag cement paste</i>	97
4.11	<i>Selectivity of chemical activators</i>	100
4.12	<i>State of alkalis in alkali-activated slag cement pastes</i>	100
4.13	<i>Summary</i>	104
5	Properties of alkali-activated slag cement pastes and mortars	106
5.1	<i>Introduction</i>	106
5.2	<i>Workability</i>	106
5.3	<i>Setting times</i>	113
5.4	<i>Strength</i>	118
5.5	<i>Shrinkage</i>	131
5.6	<i>Pores</i>	134
5.7	<i>Relationship between porosity and strength</i>	142
5.8	<i>Relationship between porosity and strength of alkali-activated slag cement mortars</i>	144
5.9	<i>Summary</i>	145
6	Properties of alkali-activated slag cement concrete	146
6.1	<i>Introduction</i>	146
6.2	<i>Workability of fresh concrete</i>	146
6.3	<i>Air entrainment</i>	149
6.4	<i>Strength</i>	150
6.5	<i>Stress-strain relationship and modulus of elasticity</i>	154
6.6	<i>Fracture of alkali-activated slag cement concrete</i>	156
6.7	<i>Interface</i>	157
6.8	<i>Shrinkage</i>	165
6.9	<i>Cracking tendency</i>	169
6.10	<i>Creep</i>	171
6.11	<i>Summary</i>	175

7	Durability of alkali-activated cements and concretes	176
7.1	<i>Introduction</i>	176
7.2	<i>Water permeability and chloride diffusion</i>	176
7.3	<i>Frost resistance</i>	181
7.4	<i>Acid attack</i>	185
7.5	<i>Chloride salts</i>	191
7.6	<i>Alkali corrosion resistance</i>	192
7.7	<i>Sulphate attack</i>	193
7.8	<i>Corrosion resistance in liquid organics</i>	198
7.9	<i>Alkali-aggregate reaction</i>	199
7.10	<i>Carbonation</i>	205
7.11	<i>Corrosion of steel reinforcement in alkali-activated cement concrete</i>	210
7.12	<i>Fire resistance</i>	212
7.13	<i>Wearing resistance</i>	216
7.14	<i>Wetting-drying resistance</i>	217
7.15	<i>Summary</i>	219
8	Mix design of alkali-activated slag cement concrete	220
8.1	<i>Introduction</i>	220
8.2	<i>Empirical mix design method</i>	220
8.3	<i>Experimental design method</i>	225
8.4	<i>Summary</i>	230
9	Alkali-activated portland cement-based blended cements	231
9.1	<i>Introduction</i>	231
9.2	<i>Portland blast furnace slag cement</i>	231
9.3	<i>Portland phosphorus slag cement</i>	235
9.4	<i>Portland silica fume cement</i>	240
9.5	<i>Portland steel slag-iron slag cement</i>	242
9.6	<i>Portland steel slag-fly ash cement</i>	243
9.7	<i>Portland fly ash cement</i>	244
9.8	<i>Multiple-components blended cements</i>	246
9.9	<i>Summary</i>	248
10	Alkali-activated lime-pozzolan cements	249
10.1	<i>Introduction</i>	249
10.2	<i>Activation of lime-natural pozzolan cement</i>	249
10.3	<i>Lime-fly ash cement</i>	263

10.4	<i>Lime-metakaolin cement</i>	268
10.5	<i>Lime-blast furnace slag cement</i>	273
10.6	<i>Summary</i>	276
11	Other alkali-activated cementitious systems	277
11.1	<i>Introduction</i>	277
11.2	<i>Alkali-activated metakaolin or fly ash cements</i>	277
11.3	<i>Alkali-activated blast furnace slag-fly ash cement</i>	286
11.4	<i>Alkali-activated blast furnace slag-steel slag system</i>	293
11.5	<i>Alkali-activated blast furnace slag-ladle slag cement</i>	295
11.6	<i>Alkali-activated-blast furnace slag-MgO system</i>	295
12	Applications and case studies	298
12.1	<i>Introduction</i>	298
12.2	<i>Alkali-activated portland-blast furnace slag-steel slag cement and concrete in China</i>	298
12.3	<i>Structural alkali-activated slag concrete</i>	301
12.4	<i>Masonry blocks, city of Mariupol, Ukraine</i>	305
12.5	<i>Concrete pavements</i>	306
12.6	<i>Drainage collector No. 5, 1966, city of Odessa, Ukraine</i>	309
12.7	<i>Silage trenches in the village of Orlyanka, Zaporozhye, Oblast, Ukraine, 1982</i>	309
12.8	<i>Autoclaved aerated concrete</i>	310
12.9	<i>Refractory concrete</i>	312
12.10	<i>Oil-well cement</i>	312
12.11	<i>Stabilization/Solidification of hazardous, radioactive and mixed wastes</i>	313
12.12	<i>Summary</i>	319
13	Standards and specifications for alkali-activated cements, concretes and products	320
13.1	<i>Introduction</i>	320
13.2	<i>Specifications on the ingredients for alkali-activated slag cements</i>	320
13.3	<i>Standards for alkali-activated slag cements</i>	324
13.4	<i>Alkali-activated slag cement concretes</i>	327
13.5	<i>Structures and structural elements made with alkali-activated slag cement concretes</i>	329

13.6 *Recommendations on production and use of
alkali-activated slag cement concretes and
structures* 330

13.7 *Use of alkali-activated slag cements
and concretes for special applications* 333

13.8 *Summary* 333
