Part I Factors that influence interactions between foodborne pathogenic agents and consumers

1 Introduction to foodborne illness: public health impact, pathogens, and consumers	3
<i>J. G. Morris Jr., University of Maryland, USA</i>	
1.1 Introduction	3
1.2 References	7
2 Populations at elevated risk of foodborne disease	9
<i>L. C. Medeiros, The Ohio State University, USA</i>	
2.1 Introduction	9
2.2 Consumer groups at risk of foodborne illness	10
2.3 Racial/ethnic or socioeconomic status and foodborne illnesses	14
2.4 Consumer awareness and knowledge about food safety	15
2.5 Travel as a risk factor for foodborne illness	21
2.6 Future consumer trends	22
2.7 Sources of further information and advice	23
2.8 References	24

3 Globalization of the food supply and the influence of economic factors on the contamination of food with pathogens	31
<i>J. C. Buzby, Economic Research Service, USDA, USA</i>	
3.1 Introduction	31
3.2 Demand-side factors	32
3.3 Supply-side factors	41
3.4 Discussion	47
3.5 Future trends	48
3.6 Sources of further information and advice	50
3.7 References	50
4 Trends in agricultural management and land use and the risk of foodborne disease	55
<i>A. P. Manale, Environmental Protection Agency, USA</i>	
4.1 Introduction	55
4.2 Trends within specific livestock categories	59
4.3 Policies and decisions affecting location of livestock production	62
4.4 Change in availability of land for waste disposal in the vicinity of concentrated livestock operations	63
4.5 Implications of land management on contamination of animal- and plant-based foods	64
4.6 Future trends	67
4.7 Sources of further information and advice	70
4.8 References	71
5 Influence of food processing practices and technologies on consumer–pathogen interactions	75
<i>V. N. Scott and P. H. Elliott, Food Products Association, USA</i>	
5.1 Introduction	75
5.2 Historical perspective on food processing – Roman sausage to canning to space food	76
5.3 Influence of science and technology on production and manufacturing processes	82
5.4 Consumer preferences and public health	94
5.5 Influence of emerging technologies and potential negative impacts	98
5.6 Future trends	102
5.7 Sources of further information and advice	104
5.8 References	105
6 Exposure assessment for foodborne pathogens	113
<i>N. Rachman, N. Tran and A. J. Miller, Exponent, USA</i>	
6.1 Introduction	113
6.2 Foodborne pathogen exposure factors	115

6.3	Environmental antecedents	117
6.4	Farm-to-table continuum	119
6.5	Exposure assessment models	127
6.6	Challenges in exposure assessment	131
6.7	Prioritizing data needs	135
6.8	Policy implications and future direction	136
6.9	References	136
7	Using surveillance data to characterize and analyze risk factors for foodborne illness	140
	<i>P. Cowen, L.-A. Jaykus and C. M. Moore, NCSU, USA, R. Morales, USDA, USA and A. Vicari, Pan American Health Organization, USA</i>	
7.1	Introduction	140
7.2	Surveillance data	141
7.3	Future trends	165
7.4	Sources of further information and advice	166
7.5	References and further reading	167
7.6	Appendix: Analytical framework for surveillance data	179
 Part II Human host factors that influence foodborne disease		
8	Nonspecific host defenses against foodborne pathogens	183
	<i>J. M. Green-Johnson, University of Ontario Institute of Technology, Canada</i>	
8.1	Introduction	183
8.2	A look at nonspecific host defenses	183
8.3	Mucosal immune responses	190
8.4	Innate cellular responses: front-line defenders	193
8.5	Other nonspecific host defenses	196
8.6	Modulating host nonspecific defenses to foodborne pathogens	197
8.7	Using probiotics and prebiotics in functional foods: issues to consider	201
8.8	Sources of further information and advice	203
8.9	References and further reading	204
9	Specific immune mechanisms of defence against foodborne pathogens	214
	<i>C. G. M. Gahan, University College Cork, Ireland</i>	
9.1	Introduction	214
9.2	Interactions between pathogens and the gastrointestinal mucosa	215
9.3	Dendritic cells as a bridge between innate and acquired immunity	219

9.4	Acquired immunity to foodborne pathogens	220
9.5	Vaccine delivery and future research	223
9.6	References	225
10	Enhanced susceptibility to foodborne infections and disease due to underlying illnesses and pregnancy	233
	<i>J. Kobayashi, University of Washington School of Public Health, USA</i>	
10.1	Introduction	233
10.2	General features and trends of compromising illnesses	234
10.3	Increased susceptibility to enteric infections in those receiving gastric acid inhibitors	235
10.4	Increased severity of <i>Vibrio vulnificus</i> infections in those with underlying liver disease	236
10.5	Salmonellosis and AIDS	237
10.6	Listeriosis in pregnancy – a risk to the woman and her newborn child	238
10.7	Toxoplasmosis – a foodborne disease without outbreaks	239
10.8	Need for continuing surveillance	241
10.9	Future trends	243
10.10	Sources of further information and advice	243
10.11	References	244
Part III	Agent factors of pathogenicity and virulence that influence foodborne disease	
11	Evolutionary parasitology: the development of invasion, evasion, and survival mechanisms used by bacterial, viral, protozoan, and metazoan parasites	251
	<i>J. Flegr, Charles University, Czech Republic</i>	
11.1	Introduction: evolutionary parasitology	251
11.2	Microevolution in population of parasitic species	252
11.3	Mechanisms of invasion, evasion, and survival	257
11.4	Future trends	266
11.5	Sources of further information and advice	268
11.6	References	268
12	Foodborne microbe mechanisms of colonization, attachment, and invasion	271
	<i>B. D. Jones, University of Iowa, USA</i>	
12.1	Foreword	271
12.2	Introduction	272
12.3	Mechanisms of <i>Salmonella</i> adherence to mammalian cells ...	274
12.4	The biology of biofilm formation	278
12.5	Mechanisms of intestinal invasion by <i>Salmonella</i>	283

12.6	Current research frontiers	284
12.7	Sources of further information and advice	285
12.8	References	285
13	Hijacking the host cell: foodborne pathogen strategies for reproduction and defense evasion	292
	<i>A. Roberts and M. Wiedmann, Cornell University, USA</i>	
13.1	Introduction	292
13.2	Evasion of immunity	293
13.3	Avoiding phagocytosis and intracellular killing	295
13.4	Cellular receptors	298
13.5	Mechanisms of protein toxin delivery	300
13.6	Pathogen control of cellular processes via NF- κ B	301
13.7	Loss of cellular integrity: cytolysis and apoptosis	302
13.8	Current research frontiers	303
13.9	References	304
14	Role of viruses in foodborne disease	309
	<i>J. Leon and C. L. Moe, Emory University, USA</i>	
14.1	Introduction	309
14.2	Detection of noroviruses and hepatitis A virus	312
14.3	Foodborne outbreaks associated with noroviruses and hepatitis A virus	313
14.4	Transmission routes of viral contamination	315
14.5	Aspects of virulence	320
14.6	Implications and future studies	327
14.7	Acknowledgements	332
14.8	References	332
15	Pathogenic mechanisms of foodborne viral disease	343
	<i>B. B. Goswami and M. Kulka, Office of Applied Research and Safety Assessment (OARSA), FDA, USA</i>	
15.1	Introduction	343
15.2	Factors contributing to the pathogenicity of viral foodborne diseases	344
15.3	Mechanisms of host cell invasion	355
15.4	Host cell defenses	359
15.5	Mechanisms of virus-induced damage to host cell	366
15.6	Implications for foodborne disease treatment and prevention ..	368
15.7	Current research frontiers	371
15.8	Sources of further information	372
15.9	Acknowledgements	372
15.10	References	372

16 Pathogenic mechanisms of food- and waterborne parasitic disease	393
<i>M. P. J. Craver and L. J. Knoll, University of Wisconsin, USA</i>	
16.1 Introduction: epidemiology of parasitic diseases	393
16.2 Mechanisms of disease	397
16.3 Conclusions	412
16.4 Acknowledgement	415
16.5 Sources of further information and advice	415
16.6 References	416
17 Dose–response relationships and foodborne disease	422
<i>M. H. Zwietering, Wageningen University, The Netherlands and A. H. Havelaar, National Institute for Public Health and the Environment, The Netherlands</i>	
17.1 Introduction: microbial risk assessment and global food safety	422
17.2 Biological background (single-hit and independent action hypotheses)	424
17.3 The single-hit family of dose–response models	425
17.4 Estimating dose–response relations: sources of data with their advantages and limitations	427
17.5 Implications of dose–response factors for risk-based food safety specifications	434
17.6 Future trends	437
17.7 Sources of further information and advice	438
17.8 References	438
